ACKNOWLEDGEMENT

This capstone project would not have been possible without the guidance, support, and encouragement of several individuals.

We would like to extend our deepest gratitude to our beloved parents, for their constant support and love throughout this journey. Your financial assistance, sacrifices, and patience have been invaluable. We are truly grateful for your continued belief in our abilities and for supporting our education.

Special thanks to our adviser, Ms. Kres-ann B. Oclarit, for her unwavering guidance, knowledge, and encouragement throughout the development of this project. Your insights and advice helped us overcome challenges and improve the quality of our system.

We would also like to express our sincere appreciation to our panel members, Mrs. Flonie Mae R. Gumapac, Ms. Lady Ben Roselle D. Nalzar, and Mrs. Daisy S. Gabule, for their constructive feedback, suggestions, and corrections. Your expertise and time greatly contributed to the refinement and success of the PAG-ILA System.

Our heartfelt thanks go to the Management Staff, HR Personnel, and Employees of Penong's Barbecue Seafoods & Grill who participated in the testing and evaluation of the PAG-ILA System. Your cooperation, feedback, and support played a vital role in ensuring that the system meets its intended objectives and functions effectively.

We are also grateful to our friends and classmates for their encouragement, support, and shared experiences throughout this academic journey. Your presence made this experience more meaningful and memorable.

Above all, we give our highest thanks to Almighty God for granting us wisdom, strength, and perseverance in completing this project. Your guidance has been our source of inspiration in times of difficulty.

Lastly, we acknowledge Davao del Norte State College for providing us with the opportunity, knowledge, and resources to develop our skills and complete this capstone project.

Thank you to everyone who contributed to the success of the PAG-ILA System.

ABSTRACT

This study presents PAG-ILA, a Human Resource Management System with RFID-based Attendance Monitoring developed for Penong's Barbecue Seafoods & Grill to improve the organization's manual human resource processes. The existing system used Daily Time Record (DTR) cards, paper-based performance assessments, and manual leave request forms, which resulted in timekeeping errors, misplaced records, delays, and increased administrative workload. To address these problems, the researchers developed a web-based system integrated with Radio Frequency Identification (RFID) technology to automate attendance monitoring and streamline HR operations across the Sasa, Buhangin, and NHA branches.

The system includes features such as RFID-based time-in and time-out monitoring, employee management, leave request processing, activity scheduling, performance evaluation, attendance tracking, and report generation. PAG-ILA was developed using the Modified Waterfall Model and implemented using PHP, MySQL, XAMPP, and RFID hardware devices. Functional, integration, hardware, and user acceptance testing were conducted to ensure that the system met the required specifications and performed effectively in real-world operations.

The system was evaluated by 22 respondents composed of employees, managers, and HR personnel, and received an overall evaluation of "Very Efficient." The findings revealed that PAG-ILA significantly improved accuracy in attendance monitoring, reduced manual workload, enhanced data security, minimized human errors, and enabled real-time monitoring of employee activities. The study concludes that the system contributes to more efficient and organized human resource management for Penong's Barbecue Seafoods & Grill. Furthermore, the project supports Sustainable Development Goal 9 (SDG 9): Industry, Innovation, and Infrastructure by promoting the use of innovative digital technologies and strengthening organizational efficiency through automated and sustainable HR infrastructure.

Keywords: *Human Resource Management System, RFID Technology, PAG-ILA, Information System*

CHAPTER I

INTRODUCTION

A. Company Overview

Penong's Barbecue Seafoods & Grill began operations in Davao City on December 5, 2003, with its first branch on Ilustre Street. Over the years, the restaurant expanded, opening company-owned branches and later offering franchise opportunities. Penong's is one of the most popular barbecue restaurants in the Visayas and Mindanao regions today. It specializes in Filipino-style barbecue, grilled seafood, and unlimited rice meals, attracting a loyal customer base.

Penong's Barbecue Seafoods & Grill operates three branches in Davao City: Sasa, Buhangin, and NHA, each known for its excellent service and quality food. The first branch, the Sasa branch, located along Km. 9, is a cozy, accessible dining spot with 21 employees and is popular among both locals and tourists. The second branch, the Buhangin branch, was recently renovated with a modern design, offering a calm atmosphere for dining and employing 22 staff members, primarily known for its grilled fish and meats. Additionally, the third branch is located in the NHA area, with 19 staff members and upholds Penong's high standards, serving its signature BBQ meals in a welcoming setting. Altogether, these three branches employ 62 staff members.

A Performance Assessment or PA is conducted to evaluate the work performance, productivity, and overall contribution of employees within the organization. It helps the management monitor how well employees perform their assigned duties, follow company standards, and provide quality service to customers. Through performance assessments, Management Staff and HR Personnel can identify employee strengths, areas for improvement, and training needs to enhance their skills. It also serves as a basis for employee recognition, promotion, incentives, and disciplinary actions when necessary.

At Penong's, employee schedules are divided into two main shifts, morning and afternoon, where each shift consists of two sessions, first and second sessions, to ensure continuous and well-managed operations throughout the day.

At every branch, employee attendance is manually tracked using a Daily Time Record (DTR) card, where staff insert DTR cards into the punch card machine. Leave requests are also handled using paper forms. Regular employees are entitled to five (5) vacation and five (5) sick leave days annually. Newly regular employees are granted a maximum of five (5) leave days, while old regulars are granted a maximum of ten (10) leave days.

However, this manual system has led to several issues, including timekeeping errors, misplaced records, human errors, and processing delays. These inefficiencies highlight the need for a more accurate, streamlined digital system to manage attendance, employee evaluations, and leave applications. This study aligns with SDG #9, "Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation" [1], by integrating innovative technologies such as RFID (Radio-Frequency Identification) for automation, security, and data management, thereby contributing to more efficient infrastructure and systems.

B. Organizational Structure

Figure 1 depicts an organizational chart that outlines the management structure of the company. At the very top, Hourbert Rhygan Uy is the Managing Director, followed by Victor Bonalos as the Assistant Managing Director. The middle section shows Rhenna Joy Caballero in Human Resources and Florebelle Banquiso as the Assistant Human Resource Officer. The lower part of the chart is divided into three branches, each with its own manager and assistant. Christian Duane Pocot and Assistant Johndave Carbanilla lead the Sasa Branch. Rolando Mahupay and Assistant Mariel Mira lead the Buhangin Branch. The NHA Branch is led by Daniel Astilla and Assistant Nina Jane Resma.

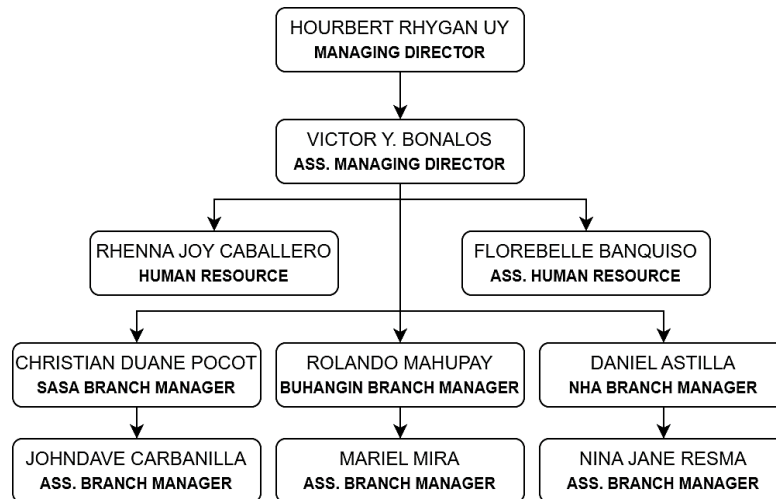

Figure 1. Penong's Barbecue Seafoods & Grill Organizational Structure

C. Problems Encountered

Penong's Barbecue Seafoods & Grill relies on Daily Time Record (DTR) cards to track employee attendance, as well as Performance Assessment (PA) and Leave Request forms for performance evaluation and leave requests. The traditional method of executing attendance requires employees to manually log their DTR cards using a punch card machine to stamp their time logs or working hours. Using paper-based performance evaluation forms consumes time, results in lost records, and is prone to human error; the same goes for leave request forms. While DTR has been the standard practice, it comes with several challenges that can affect the accuracy, efficiency, and security of employee attendance management. Penong's Barbecue Seafoods & Grill used a biometric scanner attendance system before. However, it did not apply to them since it concerns employees' fingerprints, especially those of the washers and cooks. To address these issues, the proposed system, PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID, offers a more automated and reliable solution for the problems encountered, such as:

- Punching the wrong day or section on the cards causes disorganized data, making it harder to compute attendance accurately.

- Damaged cards may not feed properly into the machine or print clearly, and if lost, there's no backup for the employee's time record.
- Individually evaluating employees through Performance Assessment (PA) forms takes too much time and is stressful.
- Forms can be misplaced, torn, or damaged, leading to missing or incomplete records of employees' performance assessments.
- Employees need to fill out paper-based leave request forms, which is time-consuming, and forms need multiple signatures, causing delays.
- Manual tracking of leave requests means the HR personnel or management staff might overlook, lose count of credits, forget requests, or lose forms, which can cause delays in approval.
- Lack of real-time monitoring in DTR makes it difficult for management to track employee attendance in real time.

D. Existing Business Process

Business processes are the backbone of every successful organization. This figure depicts a flowchart titled "Existing Attendance Process" that is divided into two columns: one for the Employee and one for the Punch Card Machine. The process starts when the employee inserts their DTR (Daily Time Record) into the punch card machine and presses the In or Out options. Once the option is selected, the machine stamps the DTR card. Finally, the machine prints the time in and out on the card, marking the end of the process.

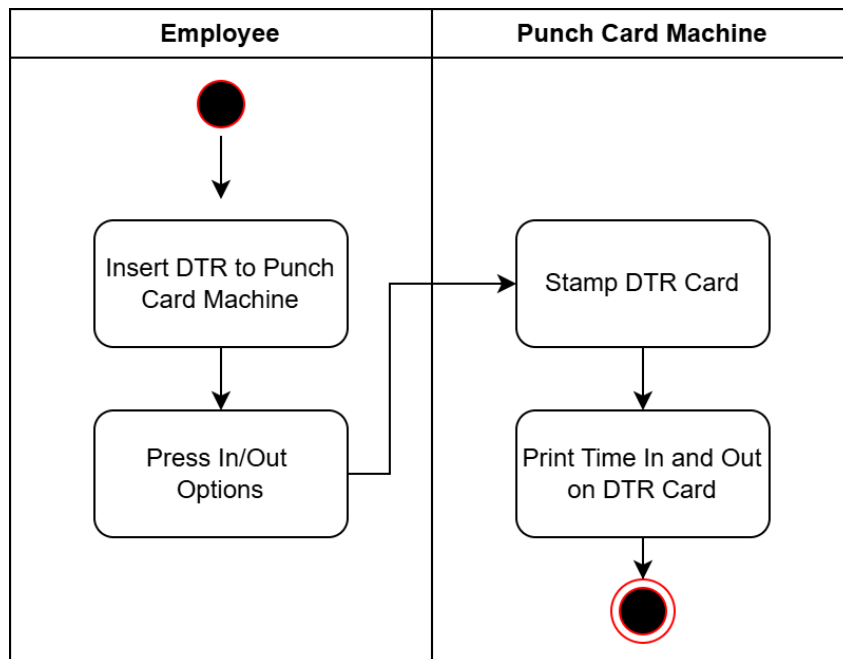

Figure 2. Existing Attendance Process

Figure 3 depicts a workflow diagram that separates tasks into four columns: HR Personnel, Management Staff, Crew Trainer, and Employee. The process begins with HR Personnel sending evaluation forms to the management staff, who then evaluate the employees. If an employee's rating is below 10, they go through a retraining loop with the crew trainer and sign a probationary contract until their rating improves. If the rating is not below 10, the management staff distributes a regular employment contract for the employee to sign. The process ends when the management staff collects the signed forms and returns them to HR personnel to be kept.

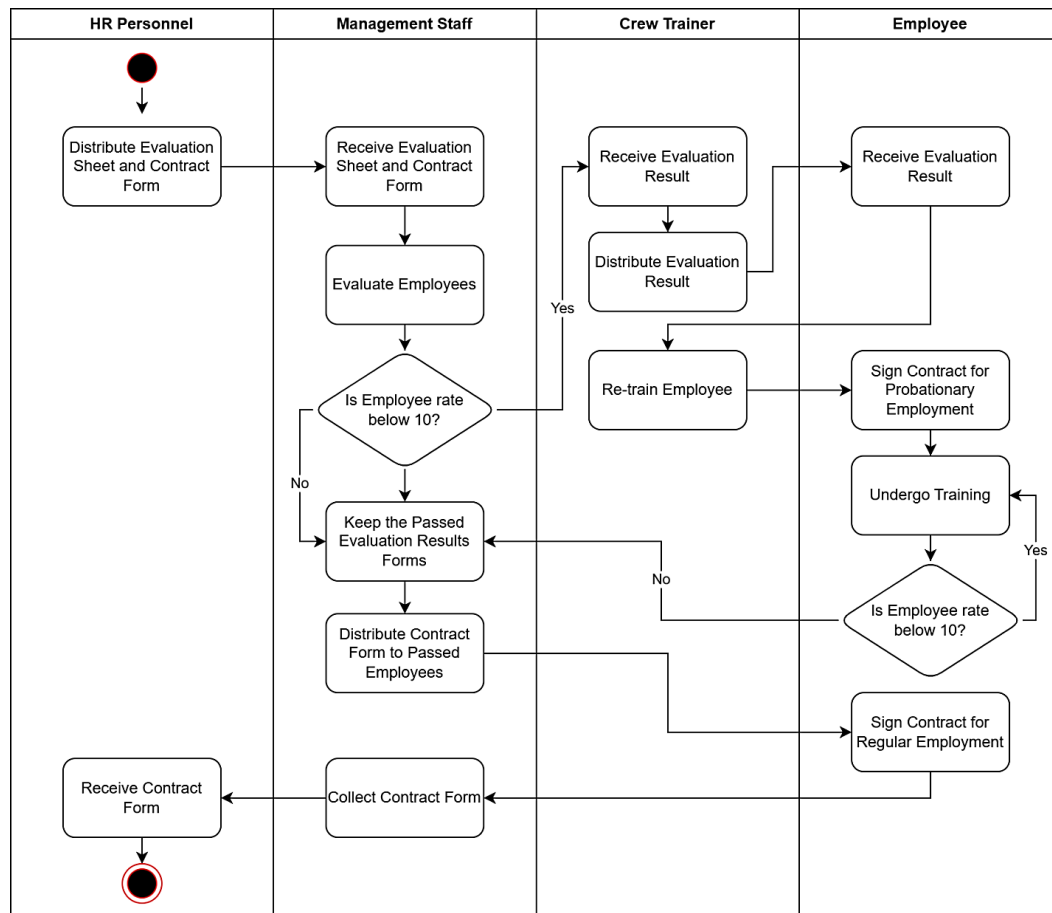

Figure 3. Existing Performance Assessment (PA) Process

Figure 4 depicts the approval workflow for an employee's leave request. The employee requests and fills out a form, which the management staff reviews to ensure it does not exceed the maximum allowed days. If the management staff approves, HR personnel perform a final check of the employee's leave credits; if credits are available, HR personnel approves the request, deducts the credits, and returns the approved form to the employee.

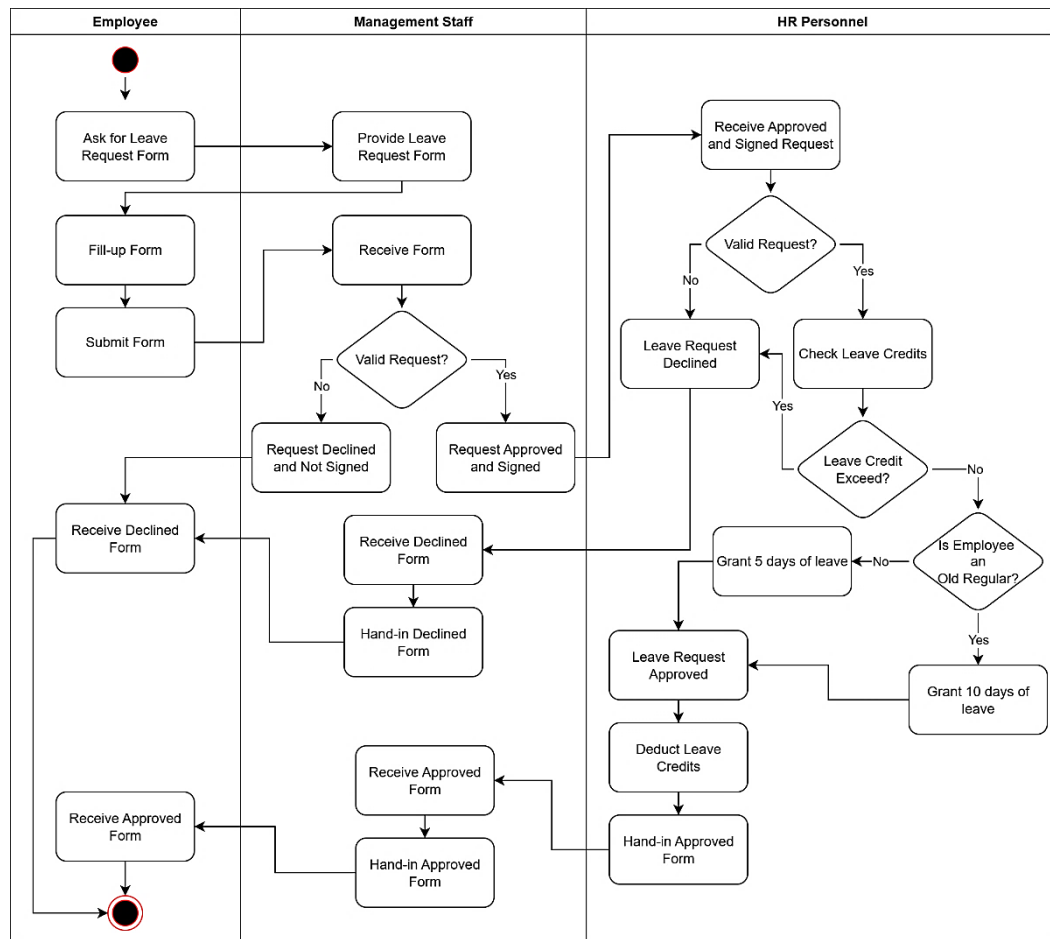

Figure 4. Existing Leave Request Process

E. Project Objectives

General Objective:

The general objective of this project for Penong's Barbecue Seafoods & Grill is to design and implement PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for three branches: Sasa, Buhangin, and NHA.

Specific Objectives:

1. Allow HR Personnel to register all users and manage the following:
 - 1.1. Personal Information
 - 1.2. Unique ID numbers
 - 1.3. Role-Based Access

- 1.4. Branch
- 1.5. Shifts
- 1.6. Employment Role
- 1.7. Positions
- 2. HR Personnel are allowed to:
 - 2.1. Manage all user list, including update, view, and delete
 - 2.2. Approve endorsed employees by the Management Staff for evaluation
 - 2.3. Approve/Decline employee leave requests
 - 2.4. Manage and approve/decline activities' schedule
 - 2.5. Notify employee leave requests status
 - 2.6. Notify all user activities schedules
 - 2.7. View all users' activity logs
- 3. Management Staff are able to:
 - 3.1. Endorse and evaluate the employees' performance
 - 3.2. Manage activities' schedules
 - 3.3. Record completed activities
 - 3.4. Approve/Decline and notify employee leave requests
 - 3.5. Manage employee's shifts and employment role
 - 3.6. View employee's logs
- 4. Enable employees to:
 - 4.1. Check in and out using RFID
 - 4.2. Apply leave request
 - 4.3. Monitor leave credits and status
 - 4.4. Manage personal information
 - 4.5. Attend and view the display calendar of activities' schedules
- 5. HR Personnel and Management Staff can track employee's attendance logs, and Employees can only view their own attendance logs.
- 6. Generate the following reports:
 - 6.1. Detailed activities' attendance
 - 6.2. Daily time record (DTR)
 - 6.3. Employee performance assessment (PA)

6.4. Completed activities

6.5. Leave requests

6.6. List of users

F. Scope and Limitations

This section describes the scope and limitations of PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for Penong's Barbecue Seafoods & Grill.

Table 1. Scope and Limitations

People	<i>HR Personnel</i> HR - is responsible for registering employees and managers, assigning roles, managing personal information, approving or declining leave requests and activities, maintaining employee records, monitoring attendance and system logs, and generating reports. Assistant HR - performs the same functions as the HR and may manage employee records, approve or decline leave requests and activities, and generate reports, especially when the HR is unavailable and has granted personal authorization. <i>Management Staff</i> Manager - is responsible for endorsing and evaluating employee performance, managing activities and employee shifts, monitoring attendance, viewing employee logs, and approving or declining leave requests; however, the manager is not allowed to register users or assign roles and is limited to managing employees within their assigned branch. Assistant Manager - has the same responsibilities as the Manager and may manage employee performance, shifts, activities, attendance, and leave requests under the authority or supervision of the Manager.
--------	---

	Employee - can check in and check out using RFID, apply for leave, monitor leave credits and request status, manage personal information, and view scheduled activities and attendance records.
Data	Employee Data - stores employee personal information, unique identification numbers, assigned roles, branch assignments, employment status, positions, and shift details. Attendance Data - records RFID-based check-in and check-out logs, daily time records, and activity attendance for monitoring employee presence. Leave Data - manages leave applications, leave credits, approval status, and leave history of employees. Activities Data - stores activity schedules, assigned participants, attendance records, and completed activity logs. Performance Data - records employee performance evaluations, endorsements, and assessment results submitted by management staff. Activity Logs - records all user actions related to activities, including creation, updates, approvals, attendance marking, and completion status, for monitoring and audit purposes. System Logs and Reports - maintains user activity logs and generates reports such as daily time records, activity attendance, performance assessments, completed activities, leave requests, and lists of users.
Process	User Registration and Management – HR personnel register users, assign roles, update employee information, and manage user access based on role permissions. Attendance Monitoring - employees record attendance through RFID check-in and check-out, which is automatically logged and monitored by HR and management staff.

	Leave Request Management - employees submit leave requests, which are reviewed and approved or declined by HR personnel and management staff, and the leave status is updated accordingly. Activities Management – HR personnel and management staff create, manage, approve, and monitor activity schedules, while employees attend and record participation in activities. Performance Evaluation – management staff endorse and evaluates employee performance, and the evaluation records are stored for reporting and monitoring. Shift Management – management staff assign and manage employee work shifts based on branch operation shifts. Activity Logs – automatically record activity logs such as creation, modification, approval, attendance marking, and completion of activities to ensure monitoring, transparency, and auditability. Report Generation - generates reports for attendance, activities, performance, leave, and user information.
Technology	<i>Software:</i> Hypertext Preprocessor (PHP) – used as the primary programming language to build the system’s back-end. MYSQL – used as the database system to store all information. XAMPP – a local server package that allows the system to run and test PHP and MYSQL. Visual Studio Code (VS Code) – a code editor used to write and organize code. Bootstrap – CSS framework used to design a clean, responsive, and mobile-friendly user interface. Box Icons – used to add simple icons to the system interface <i>Hardware:</i>

	Desktop Computer/Laptop – used to build the system and by users (HR, managers, and employees) to access and manage the system’s features. RFID (Scanner and IDs) – used for attendance monitoring, scan RFID ID cards when checking in and out, and the scanner sends the data to the system to record attendance.
--	--

G. Related System and Works

Human Resource Management Systems (HRMS) have evolved significantly with the integration of emerging technologies such as RFID, IoT, and cloud computing. These technologies play a crucial role in automating employee attendance, streamlining performance evaluations, and simplifying leave request processes. With the growing need for real-time data and operational efficiency, organizations like Penong’s Barbecue Seafoods & Grill are transitioning from traditional manual systems to intelligent digital solutions such as PAG-ILA.

RFID technology is among the most adopted solutions for automating attendance and access control. Hussain and Taha introduced an automated RFID-based attendance and access control system that demonstrated the ability to minimize administrative workload while maintaining high data accuracy and reliability [2]. Similarly, the article describes an RFID-based attendance management system that effectively logged real-time student presence in academic settings, directly paralleling the goals of PAG-ILA in the restaurant industry [3].

The study by Bhuvan et al. further supports the use of RFID by highlighting its efficiency in managing employee check-ins and check-outs while eliminating manual entry errors [4]. This technological foundation is critical for PAG-ILA, which aims to provide reliable attendance records without the errors associated with paper-based systems. Additionally, Hamza et al. demonstrated the effectiveness of integrating RFID with IoT to monitor attendance through intelligent systems, enabling the generation of comprehensive reports—one of the key deliverables of PAG-ILA [5].

The broader application of RFID in HR systems is examined in a study published in the Journal of Engineering Research and Reviews, which emphasizes automating HR functions such as attendance, leave tracking, and performance evaluations. This reinforces PAG-ILA's goal to support not just attendance tracking but also performance assessments and employee requests [6]. Furthermore, digitized leave application systems are proven to improve efficiency and accountability, reducing the time and resources required to manage leave requests manually [7].

The inclusion of centralized notifications and event tracking has been widely supported by research, which emphasizes its role in improving internal communication and ensuring that employees are informed of upcoming schedules or updates [8]. PAG-ILA includes this functionality to promote transparency and organizational awareness.

Further reinforcing these developments, Koppikar et al. introduced an IoT-based employee-tracking system that monitors attendance in real time using RFID, enabling operational improvements and reducing discrepancies in manual logs [9]. Panchal et al. focused on departmental RFID attendance systems, showcasing how RFID technology can be tailored to various organizational contexts, a flexible design principle also applied in PAGILA [10].

Hamza's research highlights the integration of HRMS with IoT for enhanced real-time monitoring and analytics, fostering data-driven decision-making within HR departments [11]. PAG-ILA aligns with this approach by offering managers data visualizations for attendance, performance, and leave metrics.

Technical studies, such as the RFID microcontroller-based system from Electronics Hub, provide foundational insights into the architecture of RFID solutions, supporting the hardware design of systems like PAG-ILA [12]. Similarly, Mark Trace IoT presented a system that emphasizes trace tracking in addition to attendance, expanding the potential applications of RFID systems in workforce management [13].

The RFID-based attendance monitoring system developed for Laguna State Polytechnic University demonstrated its reliability and accuracy when deployed in real-time environments, supporting the feasibility of similar implementations in corporate settings such as Penong's [14]. Lastly, CPCon Group's RFID workforce optimization solution emphasized minimizing administrative workload and maximizing productivity through automated tracking—two core objectives of PAG-ILA [15].

The human resource management study in Digos City found that HR functions have been effectively distributed or delegated within the organization, allowing for a more efficient and streamlined HR department and directly supporting the structural goals of the PAG-ILA Human Resource Management System with RFID Attendance Monitoring, similar to the efficiency of HR practices observed in Digos. PAG-ILA is designed to decentralize and digitize HR operations. [16]. Furthermore, the RFID-based attendance system implemented at the College of Information Technology and Engineering, Notre Dame of Midsayap College, has proven highly effective, reinforcing the practicality of adopting a similar technology at Penong's Barbecue Seafoods & Grill. That implementation demonstrated the ability of RFID systems to simplify time tracking and reduce manual errors during events, a benefit that PAG-ILA also leverages for daily workforce monitoring and accurate DTR recording, marking a successful transition from traditional methods to advanced RFID technology [17]. By combining these proven strategies, PAG-ILA reflects a local, evidence-based transition from manual HR processes to automated, accountable, and real-time solutions.

The PAG-ILA project aligns with Sustainable Development Goal 9 (SDG 9)—Industry, Innovation, and Infrastructure—in the context of a rapidly changing global economic landscape and increasing inequalities. Sustained growth must include industrialization that, first of all, makes opportunities accessible to all people and, second, is supported by innovation and resilient infrastructure. [18] The project addresses operational inefficiencies through the Human Resource Management System with Attendance Monitoring using RFID. Designed for

Penong's Barbecue Seafoods & Grill, the system replaces outdated, paper-based processes with digital solutions for attendance tracking, performance assessments, and leave requests. This shift to automation improves accuracy, reduces human error, and enhances employee management across multiple branches. By promoting the use of innovative technology and establishing efficient digital infrastructure, PAG-ILA helps foster a more productive, transparent, and organized workplace, aligning to build resilient and inclusive industries supported by sustainable innovation.

The PAG-ILA, A Human Resource Management System with Attendance Monitoring using RFID, supports Davao del Norte State College's (DNSC) agenda on the Development of Human Capital through Inclusive and Industry-based Education. This project helps improve how the organization manages its employees by using technologies to make attendance checking and HR tasks easier and more organized. It also allows the HR department and managers to monitor employee performance, leave requests, and events, including training and seminars, more efficiently. By doing this, employees are treated fairly and given equal opportunities to grow. The system connects what students learn in school with what businesses need in real life. It also helps companies like Penong's become more productive, which supports the growth of skilled workers in the community.

Ambisyon Natin 2040 aims to create a firmly rooted, comfortable, and secure life for all Filipinos by the year 2040. [19] It emphasizes building a high-trust society where individuals, communities, and institutions work efficiently and with integrity. The capstone project, PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID, supports *Pagbabago*, which focuses on reducing inequality and promoting fair opportunities for all. This system helps manage employees more organically and equitably by using RFID for attendance and providing tools to track performance, leave, and training. It ensures that every worker, from any branch, is treated fairly and that their records are based on actual data. PAG-ILA helps promote fairness in the workplace, supporting the

Pagbabago goal in AmBisyon Natin 2040 by promoting how employees are managed and valued

The Philippine Development Plan (PDP) 2023–2028 serves as the government's roadmap toward achieving the Ambisyon Natin 2040 goals. [20] It focuses on improving bureaucratic efficiency, enhancing digital governance, and encouraging innovation through technology. The PAG-ILA system, a human resource management system with RFID-based attendance monitoring, supports the goals of Chapter 13, Subchapter 13.2 of the PDP 2028, which aim to enhance the administration of justice. By accurately and securely tracking employee attendance, the system promotes accountability and transparency among staff. It helps avoid manual errors, prevents time fraud, and ensures fair and just records of employee work hours. With these improvements, the organization can make better human resources decisions and build trust between staff and management. In this way, PAG-ILA contributes to a more efficient and just workplace environment.

Although these studies have highlighted the advantages of the existing system, which was suitable for tracking attendance, it lacked essential HR features such as performance reviews, leave requests, and event updates. It didn't support managers well, couldn't handle multiple branches, and wasn't easy to scale or connect with a database. PAG-ILA aims to address these gaps by bringing all these features together into a single, easy-to-use, web-based platform. It includes tools for attendance, leave management, and employee evaluations, as well as calendar views, event tracking, and real-time notifications. It also allows access for admins, managers, and employees, making it easier to manage people across different branches. With dashboards and reports, PAG-ILA helps HR teams make better decisions and manage everything in one place.

In conclusion, existing research and technological implementations showcase the potential of RFID systems in revolutionizing attendance, performance, and human resource management. PAG-ILA, through its RFID-enabled features, builds on this foundation to address inefficiencies in Penong's

manual operations, thereby enhancing data accuracy, enabling real-time monitoring, and improving overall organizational efficiency.

CHAPTER II

METHODOLOGY

This chapter discusses the methods and techniques used to analyze and develop the proposed information systems. The purpose of the following sections of this chapter is to explain all experimental measures and controls.

H. Startup and Feasibility

A feasibility study is an analysis conducted to determine whether a business idea is viable, feasible, and sustainable. It is an essential stage of the project process since it focuses on establishing and approving the business's concepts and plans of action for system adaptation [19]. Implementing PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID has been shown to enhance operational efficiency, data accuracy, and employee accountability. This approach addresses common challenges associated with manual HR processes, such as time-consuming attendance recording and fragmented performance evaluations.

Budget and Summary

A project budget and summary include a detailed estimate of all costs likely to be incurred during the project's completion. Table 2 presents a comprehensive budget and summary for the proposed information system, spanning from March 03, 2025 to April 21, 2026. It breaks the development lifecycle into six phases: Requirement Analysis, System Design, Implementation, System Testing, Deployment, and Maintenance, detailing the specific dates, man-days, and costs for each. With a total commitment of 171.5 man-days and an estimated budget of ₱162,388.09, the data indicates that Implementation is the most resource-intensive phase and Maintenance is the shortest and least expensive.

Table 2. Budget and Summary

Phases	Duration (Man-days)	Start Date	End Date	Estimated Cost
Requirement Analysis	43	Mon, 3-Mar-25	Wed, 30-Apr-25	₱41,972.73
System Design	25.5	Fri, 2-May-25	Mon, 30-Jun-25	₱26,426.14
Implementation	47	Tue, 1-Jul-25	Fri, 14-Nov-25	₱42,606.34
System Testing	40.5.5	Mon, 17-Nov-25	Fri, 13-Feb-26	₱37,281.89
Deployment	32	Mon, 16-Feb-26	Fri, 27-March-26	₱27,974.61
Maintenance	14.5	Mon, 30-Mar-26	Tue, 21-Apr-26	₱13,299.45
Total	202.5			₱189,561.16

Manpower Cost Estimates

Table 3 presents the Manpower Cost Estimates for the project, detailing the daily rates and total labor requirements for various roles. It breaks down the personnel involved, including the Project Manager, System Programmer, System Analyst, System Design, and System Tester, listing their respective daily rates, total man-days allocated, and the resulting cost for each position. While the Project Sponsor contributes 4 man-days, this role incurs no direct cost. Overall, the project utilizes a total of 171.5 man-days, with a cumulative manpower budget of ₱162,388.09. The System Analyst represents the highest individual cost at ₱57,272.73.

Table 3. Manpower Cost Estimates

Phase	Rate/Day	Total Man-days	Cost
Project Manager	₱1,103.41 [21]	39.5	₱43,584.66
Project Sponsor	-	6.5	-
System Programmer	₱820.50 [22]	50.5	₱41,435.25
System Analyst	₱909.09 [23]	69	₱62,727.27
System Design	₱1,136.36 [24]	26.5	₱30,113.64
System Tester	₱1,114.32 [25]	10.5	₱11,700.34
TOTAL		202.5	₱189,561.16

Operational Feasibility

The project sponsor agrees to accept the project team's information system proposal. Particularly, if the project team needs firm information for system development, the project sponsor is approachable and easy to communicate with. It is more important to examine the sponsor's support to determine the viability of the proposed project. The system will likely be deployed and used if management approves the request. The PAG-ILA: Human Resource Management System with Attendance Monitoring using RFID is practical and easy to use for the staff and management of Penong's Barbecue Seafoods & Grill. The system will help address current problems such as manual attendance errors, lost leave forms, and delays in performance evaluations. It is designed to be user-friendly, allowing employees and managers to learn it quickly, especially with the help of training and guides. Using RFID for attendance makes the process faster and more accurate.

Technical Feasibility

Table 4 outlines the resources required for successful execution, beginning with a guarantee from the project sponsor to supply the necessary hardware and software resources. To ensure the system runs effectively, the company is prepared to support the project team with up-to-date technological specifications and installation assistance. Existing IT components across the Sasa, Buhangin,

and NHA branches include three units of Operating Systems and three units of Microsoft Office and Google Chrome on the software side. The hardware inventory comprises three desktop computers and three laptops, while network connectivity is supported by three PLDT Home Fiber lines to ensure stable system access.

Table 4. Existing IT Components of the Organizations (Sasa, Buhangin, and NHA Branch)

IT Components	Particulars	Quantity
Software	Operating Systems	3
	Microsoft Office	
	Google Chrome	
Hardware	Desktop Computer	3
	Laptop	
Network	PLDT Home Fiber	3

Table 5 details the specific hardware requirements for the system, highlighting the specialized equipment and computing power necessary for operation. The project utilizes RFID ID Card Readers, which are plug-and-play USB devices capable of reading 13.56 MHz or 125 KHz proximity sensors. These work in conjunction with RFID Cards, specifically MIFARE Classic 13.56 MHz proximity IC smart card tags. To support these peripherals and run the system software, the organization utilizes ASUS L410 Laptops. These ultra-portable 14-inch computers are powered by Intel Celeron N4020 processors and feature 4GB of DDR4 RAM, up to 128GB of eMMC storage, and a Full HD 1920x1080 display to ensure a crisp user interface.

Table 5. Hardware

Hardware	Description	Specification
RFID ID Card Reader	Plugged and play USB RFID Card Reader used to read 13.56 MHz or 125KHz RFID Cards [31]	13.56 MHz 125Khz USB Proximity Sensor Smart Contactless RFID ID Card Reader [31]
RFID Cards	13.56 MHz ID Proximity IC Smart Card Tag Ent. [32]	RFID / NFC Card - MIFARE Classic 13.56 MHz Proximity Card 125Khz 10 pcs [32]
ASUS L410 Laptop	A super-light, ultra-portable 14" laptop powered by an Intel Celeron N4020. [33]	4 GB of DDR4 RAM, 64 GB or 128 GB eMMC storage, and a crisp Full HD (1920 x 1080) display. [33]

Complementing the hardware, Table 6 outlines the software required for development and hosting. The project utilizes Web.com.ph to provide a unique website address for public and staff access, while Hostinger serves as the web hosting provider for managing moderate traffic. For the database and server environment, the team employs the XAMPP cross-platform stack featuring MariaDB 10.

The system is developed as a dynamic web application using PHP 8.0 or higher. All programming is conducted in Visual Studio Code, a lightweight source code editor that supports PHP, HTML, CSS, JavaScript, and various other languages via extensions. To ensure data security, a Comodo Essential SSL (DV) certificate is implemented to provide basic encryption for the website.

Table 6. Software

Software	Description	Specification
Domain Name	Unique website address (e.g., pag-ila.gov.ph) for public and staff access.	Web.com.ph
Web Hosting	Small to medium-sized web applications with moderate traffic.	Hostinger
XAMPP	Free and open-source cross-platform web server solution stack package developed by Apache Friends	MariaDB 10.x (earlier versions used MySQL)
PHP	Server-side language for building dynamic websites and systems	PHP 8.0 or higher
Visual Studio Code	Open-source, lightweight source code editor	PHP, HTML, CSS, JavaScript, Python, C++, and more via extensions
SSL Certificate	Quick issuance, basic encryption, ideal for small to medium websites.	Comodo Essential SSL (DV)

Work Plan and Schedule Feasibility

A work plan is a written document used to track a project's progress. A work plan outlines the actions, milestones, and resources necessary to complete a project or achieve a specific goal. It serves as a roadmap to help the project team complete the work or accomplish the goal. A schedule feasibility analysis assesses whether tasks can be completed on time and identifies potential issues to help ensure the work plan is feasible within the time constraints.

Project Development Methodology

Figure 5 shows the Modified Waterfall Model, which worked well for the study; it provided a straightforward, step-by-step process to follow, precisely what

the project team needed. The waterfall model is the oldest and most widely used model in software development. Particular advantages make this model one of the most commonly used to date. According to the article “Feasibility of Waterfall Model to Enhance Human Resource Management System” [26], the maintenance phase is a post-implementation review to ensure the system built runs according to its goals and functions. Errors in the development and use of the system can be corrected at this phase. Starting with gathering all the requirements helped fully understand what needed fixing, and from there, it was possible to carefully plan the design and features, such as RFID tracking and performance assessments. In this article, as well as in [27], a classical development cycle model that emphasizes a sequential phase approach is one of the earliest methods in software development. The structured flow of the Waterfall model made it easier to stay organized, track progress, and make sure the project didn’t miss any details. Lastly, in the article “Analysis and Design of Employee Management Information System using the Web-Based Waterfall Method” [28], the structured flow of the Waterfall model made it easier to stay organized, track progress, and make sure not to miss any critical details.

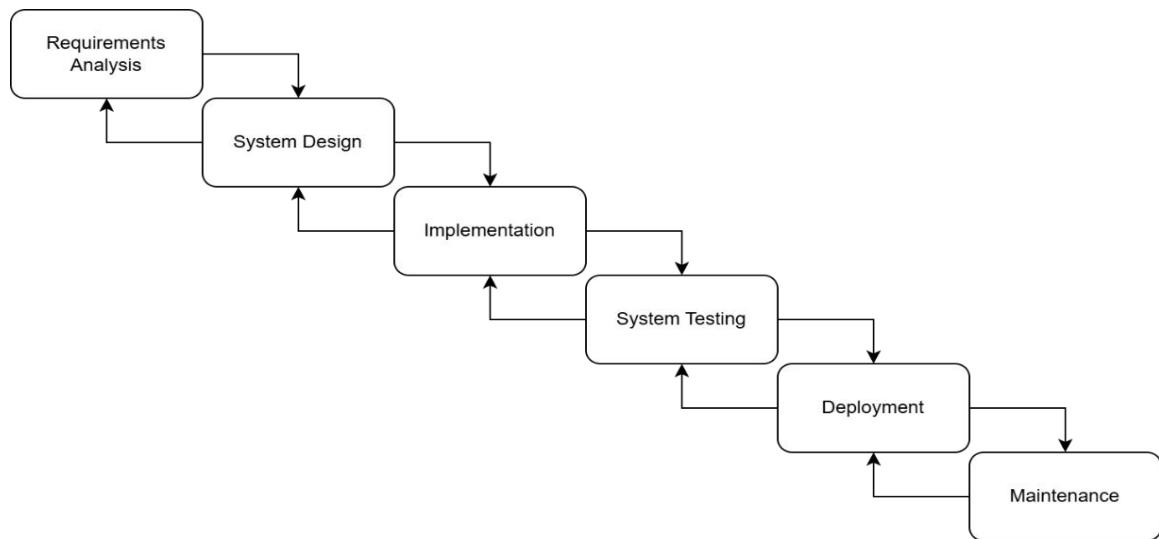

Figure 5. Modified Waterfall Model

Integrated and Proposed New Processes

Figure 6 illustrates the RFID attendance workflow involving three columns: the HR Personnel, the PAG-ILA system, and the Employee. HR Personnel initiates the process by registering employees or managing the employee list, which the system then saves and updates. Employees can manage their personal profiles and perform the primary attendance action by scanning their RFID. The system then verifies if the user is a registered employee and checks if it is currently the employee's shift. If verified, the system displays time logs, updates the attendance dashboard, and records the employee's attendance; otherwise, it displays an "Unregistered User" or "Time in and out is not available" message.

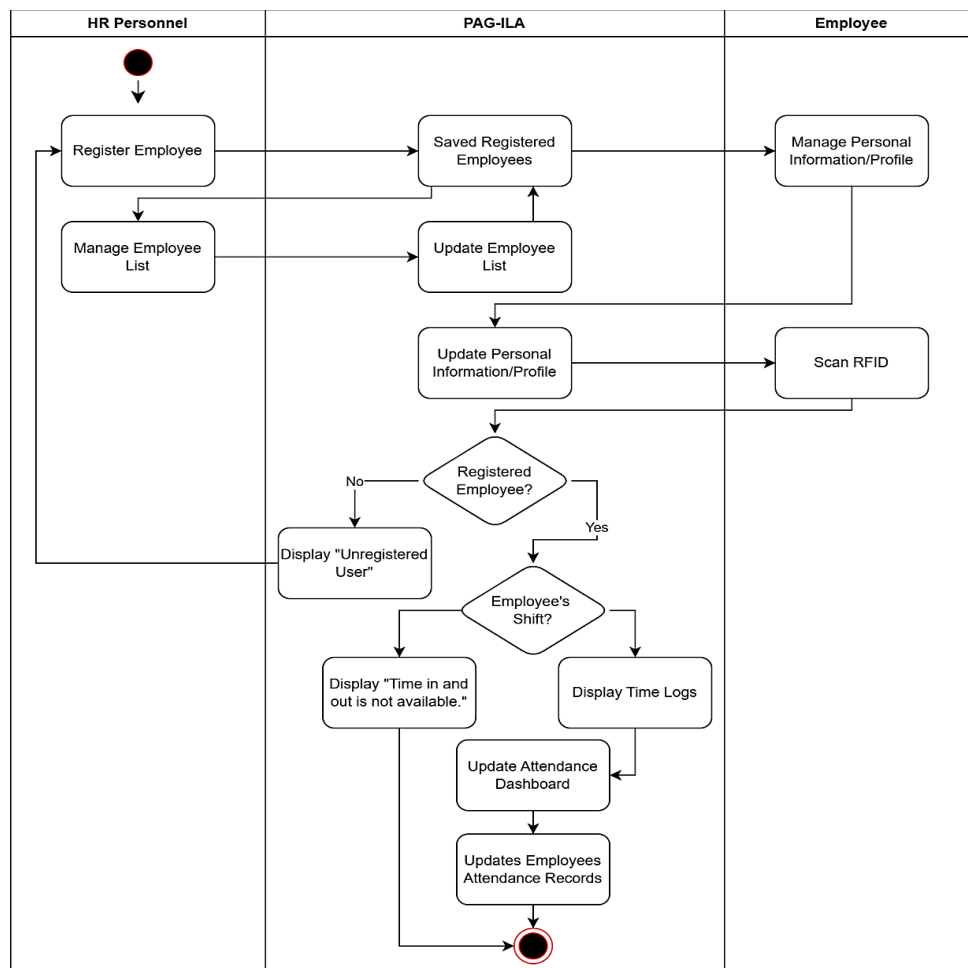

Figure 6. Integrated RFID Attendance

Figure 7 depicts the workflow that manages the submission and approval cycle involving Employees, the PAG-ILA system, Management Staff, and HR Personnel. An employee initiates the process by submitting a leave request through the system. The PAG-ILA system automatically performs a series of validations, checking for sufficient leave credits and applying specific logic based on the employee's tenure, such as limits for "old regular" employees. If the request passes these system checks, a manager is notified to review the validity of the reason. Following management's initial approval, the request is routed to HR personnel for a final validation. Once both management and HR have approved the request, the system updates the leave status, notifies the employee, and automatically deducts the approved days from the employee's total leave credits.

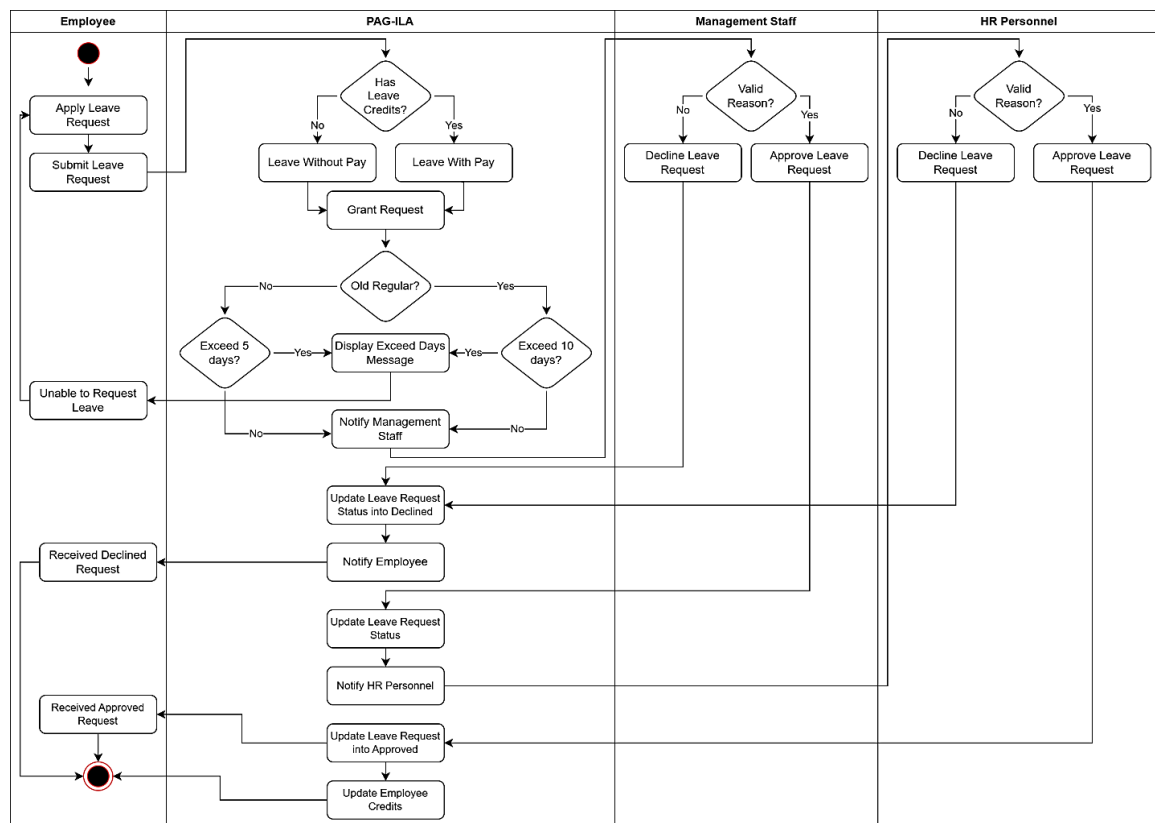

Figure 7. Integrated Leave Request

Figure 8 depicts a performance evaluation workflow divided into four columns: Employee, Manager/Assistant, PAG-ILA system, and HR/Assistant. The process starts when the Manager/Assistant endorses employees to be rated,

which triggers a notification to HR/Assistant for approval. Once HR/Assistant approves, the Manager/Assistant evaluates the employees, and the system checks if the rating is below 10. If the rating is below 10, the system saves a "Failed Evaluation Form," but if the rating is higher, it saves a "Passed Evaluation Form." Finally, the system updates the records, notifies the employee of the result, and generates reports for HR/Assistant and the Crew Trainer.

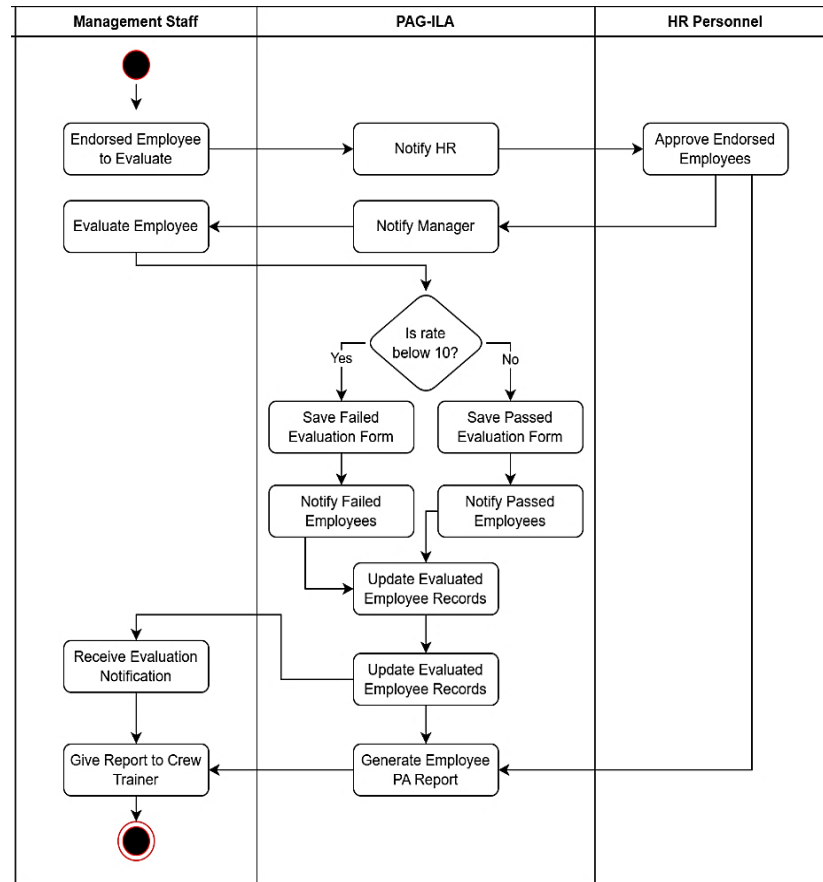

Figure 8. Integrated Performance Assessment

Project Development Team

The development team is a crucial component of the project, responsible for the successful design, development, and implementation of the system. The development team is shown in Figure 9. The Project Sponsor provides the information the project team needs for this study. The Project Manager monitors the progress of the project. They manage resources, set timelines, and facilitate

effective communication among team members. The programmer focuses on translating system requirements into functional features and addressing any technical challenges that may arise during development. The System Designer focuses on ensuring the system is organized, efficient, and meets the organization's needs. Lastly, the System Analyst works closely with stakeholders to gather information, analyze existing processes, and identify system functionalities.

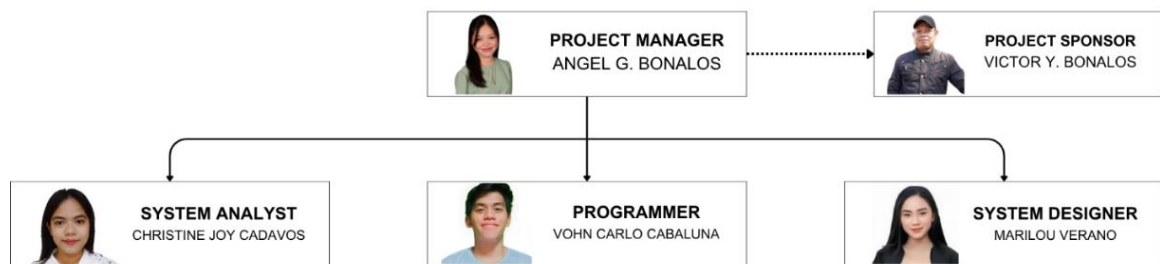

Figure 9. Project Team Development

Work Breakdown Structure

A Work Breakdown Structure (WBS) is a typical productivity tip for making work more manageable and approachable: break it down into smaller tasks. The work breakdown structure, one of the essential project management documents, is the tool that employs this technique in projects. Figure 10 displays the Work Breakdown Structure (WBS) of the proposed IS, which shows the tasks assigned to the project team. There are six phases in WBS: Requirement Analysis Phase, System Design Phase, Implementation Phase, System Testing Phase, and Operation and Maintenance Phase. Each phase consists of task and subtasks that the project team will perform.

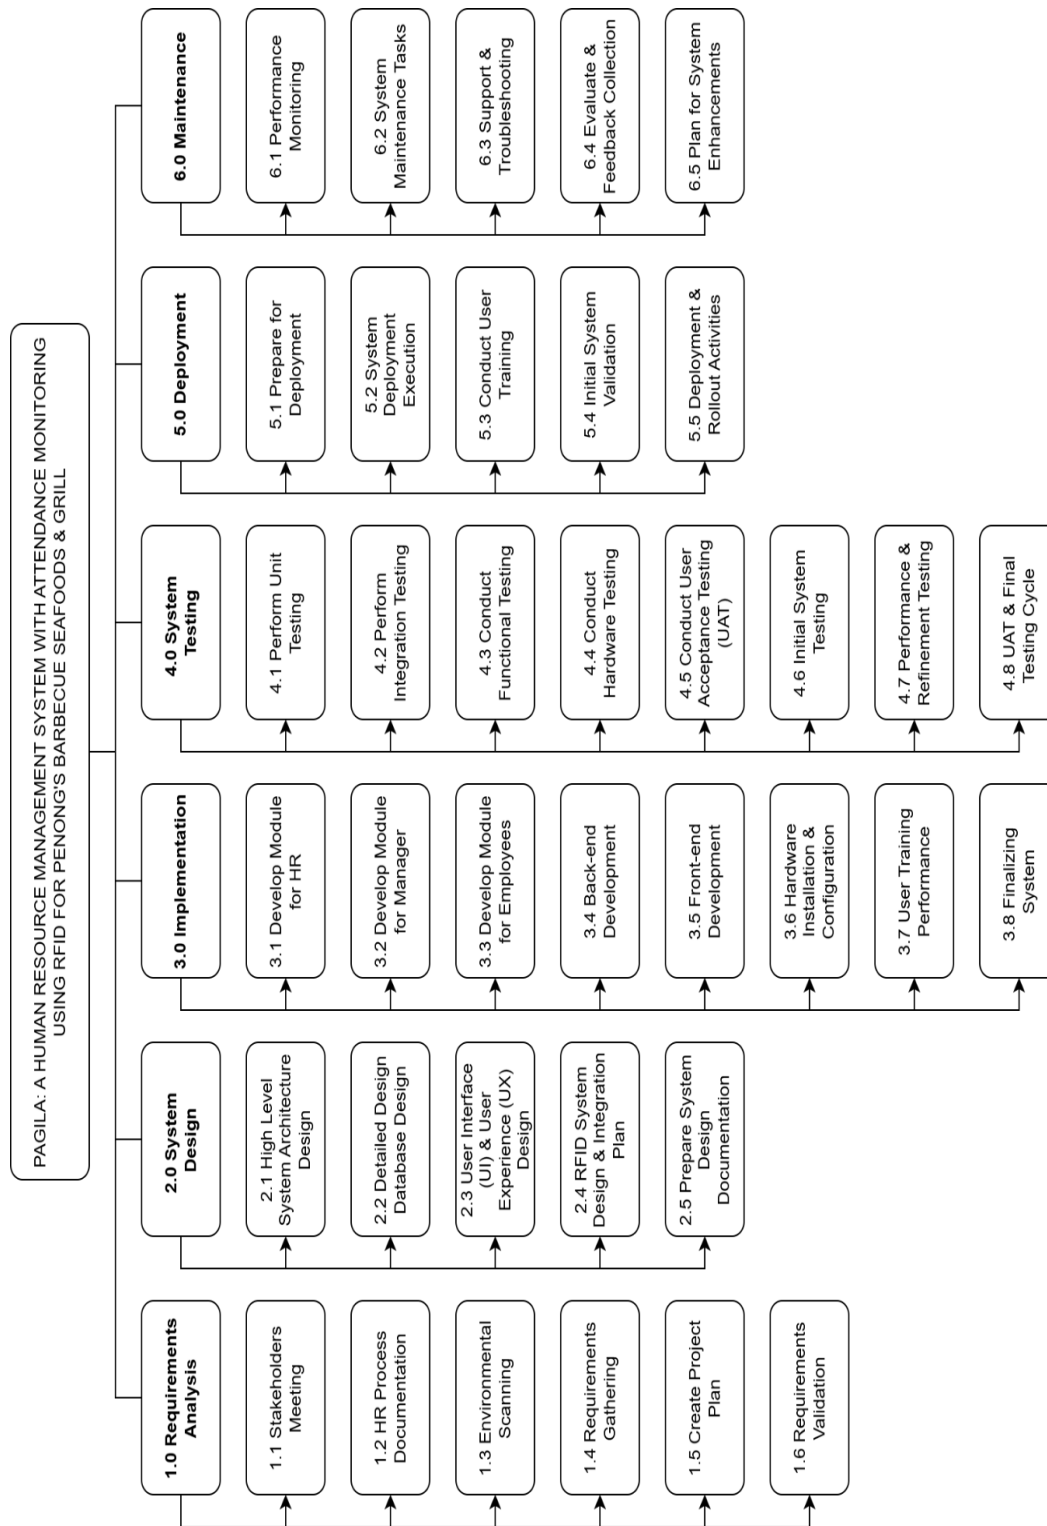

Figure 10. Work Breakdown Structure (WBS)

WBS Dictionary

This section shows the detailed work breakdown structure, including tasks, subtasks, activities, and dates. Table 7 identifies each structure level, which represents a specific level of detail, enabling straightforward assignment of responsibilities, resource estimation, and progress tracking.

Table 7. WBS Dictionary

WBS CODE	Activity Name	Start Date	End Date	Resources Involved	Estimated Man-days
1.0 Requirements Analysis					
1.1	Stakeholders Meeting	Mon, 03-Mar-25	Wed, 11-Mar-25	PM, SA	7
1.2	HR Process Documentation	Wed, 12-Mar-25	Wed, 19-Mar-25	SA	7
1.3	Environmental Scanning	Thu, 20-Mar-25	Mon, 31-Mar-25	SA, SD	5
1.4	Requirements Gathering	Tue, 01-Apr-25	Wed, 16-Apr-25	SA, PM, SD	9
1.5	Create Project Plan	Thu, 17-Apr-25	Wed, 23-Apr-25	PM, SA	5
1.6	Requirements Validation	Thu, 24-Apr-25	Wed, 30-Apr-25	PM, SA, PS	5
2.0 System Design					
2.1	High-Level System Architecture Design	Fri, 02-May-25	Tue, 13-May-25	SD, SA, PM	4
2.2	Detailed Design Database Design	Wed, 14-May-25	Tue, 27-May-25	SD, SA	4.5
2.3	User Interface (UI) & User Experience (UX) Design	Wed, 28-May-25	Tue, 10-Jun-25	SD	5
2.4	RFID Systems Design & Integration Plan	Wed, 11-Jun-25	Mon, 23-Jun-25	SD, SA	4
2.5	Prepare System Design Documentation	Tue, 24-Jun-25	Mon, 30-Jun-25	SD, SA, PM	2.5
3.0 Implementation					
3.1	Develop Module for HR	Tue, 1-Jul-25	Fri, 4-Jul-25	SP	2

3.2	Develop Module for Manager	Mon, 14-Jul-25	Thu, 31-Jul-25	SP	4.5
3.3	Develop Module for Employee	Mon, 4-Aug-25	Mon, 18-Aug-25	SP	3
3.4	Back-End Development	Tue, 19-Aug-25	Thu, 18-Sep-25	SP, SD	6.5
3.5	Front-End Development	Fri, 19-Sep-25	Fri, 17-Oct-25	SP, SD	5
3.6	Hardware Installation and Configuration	Mon, 27-Oct-25	Tue, 4-Nov-25	SP, SD	4.5
3.7	User Training Preparation	Wed, 5-Nov-25	Fri, 7-Nov-25	PM, SA, SP	2
3.8	Finalizing System	Mon, 10-Nov-25	Fri, 14-Nov-25	PM, SA, SP, SD	4
4.0 System Testing					
4.1	Perform Unit Testing	Mon- 17-Nov-25	Thu, 20-Nov-25	SP	2
4.2	Perform Integration Testing	Fri, 21-Nov-25	Wed, 3-Dec-25	SP, SA	2
4.3	Conduct Functional Testing	Thu, 4-Dec-25	Thu, 18-Dec-25	SA, SP	3
4.4	Conduct Hardware Testing	Fri, 19-Dec-25	Tue, 30Dec-25	SP, SD	1.5
4.5	Conduct User Acceptance (UAT)	Mon, 5-Jan-26	Fri, 9-Jan-26	PM, SA	2.5
4.6	Initial System Testing	Mon, 12-Jan-26	Fri, 16-Jan-26	PM, SA, SP	2.5
4.7	Performance & Refinement Testing	Mon, 19-Jan-26	Thu, 22-Jan-26	SA, SP, SD	2
4.8	UAT & Final Testing Cycle	Tue, 27-Jan-26	Fri, 13-Feb-26	PM, SA, SD	11
5.0 Deployment					
5.1	Final Deployment Preparation	Mon, 16-Feb-26	Tue, 24-Feb-26	SP, ST, SA, PM, SD	3.5
5.2	System Deployment Execution	Thu, 26-Feb-26	Mon, 2-Mar-26	SP, PM, SA	2
5.3	Conduct User Training	Tue, 3-Mar-26	Fri, 6-Mar-26	SA, PM, SD	2
5.4	Initial System Validation	Mon, 9-Mar-26	Thu, 12-Mar-26	SA, ST, PM	2
5.5	Deployment & Rollout Activities	Fri, 13-Mar-26	Mon, 30-Mar-26	PM, SA, SD, PS	6
6.0 Maintenance					

6.1	Performance Monitoring	Tue, 31-Mar-26	Thu, 2-Apr-26	SP, ST, SA	1.5
6.2	System Maintenance Tasks	Fri, 3-Apr-26	Wed, 8-Apr-26	SP, ST SA, SD	2
6.3	Support and Troubleshooting	Thu, 9-Apr-26	Mon, 13-Apr-26	SA, SP, PM	1.5
6.4	Evaluate and Feedback Collection	Tue, 14-Apr-26	Thu, 16-Apr-26	PM, SA, ST	1.5
6.5	Plan for System Enhancements	Fri, 17-Apr-26	Wed, 21-Apr-26	PM, SA, SD, SP	2

GANTT Chart

The Gantt Chart provides a comprehensive visual representation of the project timeline and its corresponding phases for the PAG-ILA Human Resource Management System with Attendance Monitoring using RFID for Penong's Barbecue Seafoods & Grill, Figure 11 displays a project timeline divided into six phases that span from March 2025 to April 2026. The project begins with Requirements Analysis from March 3 to April 30, followed by System Design from May 1 to June 30. The Implementation phase takes place from July 1 to November 14, leading into System Testing, which runs from November 17 to January 30 of the next year. The final stages are Deployment in February and Maintenance from March 2 to April 8.

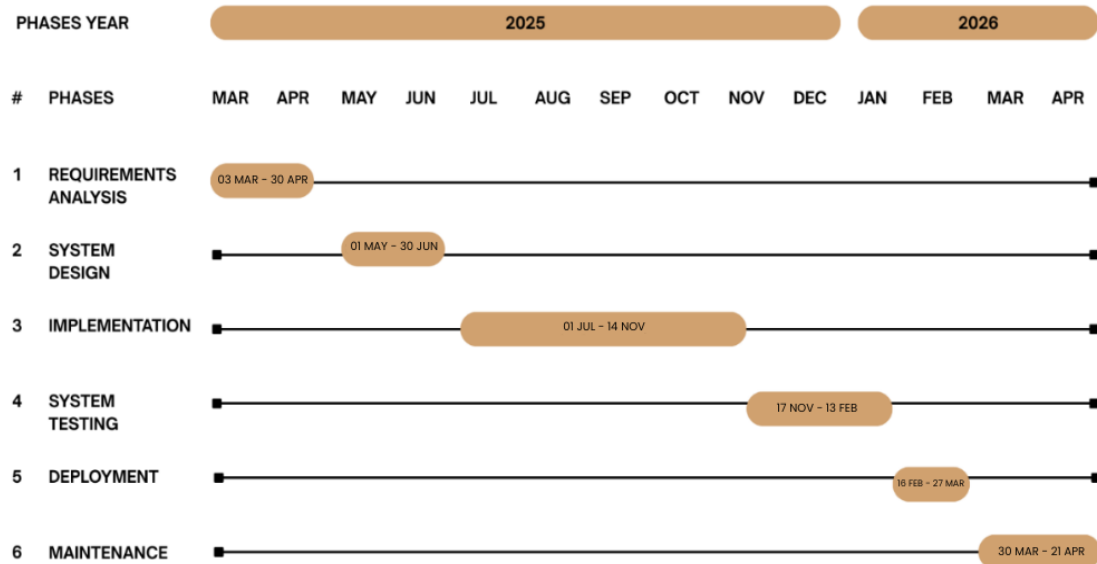

Figure 11. GANTT Chart

I. Financial Plan and Economic Feasibility

A project's financial plan is an extensive record detailing all project expenses, commonly known as a project budget. After identifying the project's costs, a thorough review is conducted to confirm alignment with the budget limitations. Evaluating a project's potential profitability involves a crucial factor: economic feasibility. Even if a project has a low likelihood of turning a profit, it may still be economically viable if it can generate revenue. Typically, the financial plan includes a segment dedicated to analyzing the project's economic feasibility.

Budget Allocation and Schedule

Table 8, Budget Allocation and Schedule, lists the project's estimated costs for each month from March 2025 to April 2026. The table breaks down expenses into four categories: WBS Cost, Technology, Audit Cost, and Effort Cost. It shows that the Audit Cost is a fixed amount of ₱1,500.00 every month, while other costs vary. The bottom row summarizes the expenses, showing a WBS Cost of ₱162,388.09 and a final Total Project Cost of ₱201,835.32.

Table 8. Budget Allocation and Schedule

Year	Month	WBS Cost	Technology	Audit Cost	Effort Cost	Total Cost	Cumulative Cost
2025	Mar	₱22,333.52		₱1,500.00	₱1,985.20	₱25,818.72	₱25,818.72
	Apr	₱19,639.20		₱1,500.00	₱1,745.71	₱22,884.91	₱48,703.64
	May	₱12,012.50	₱633.00	₱1,500.00	₱1,067.78	₱15,213.28	₱63,916.91
	Jun	₱14,413.64		₱1,500.00	₱1,281.211	₱17,194.85	₱81,111.76
	Jul	₱5,333.25		₱1,500.00	₱474.04	₱7,307.32	₱88,419.08
	Aug	₱4,102.50		₱1,500.00	₱364.67	₱5,967.17	₱94,386.25
	Sep	₱5,649.11		₱1,500.00	₱502.14	₱7,651.26	₱102,037.50
	Oct	₱11,286.64	₱469.00	₱1,500.00	₱1,003.26	₱14,258.89	₱116,296.40
	Nov	₱19,020.64		₱1,500.00	₱1,690.72	₱22,211.36	₱138,507.76
	Dec	₱6,685.91		₱1,500.00	₱594.30	₱8,780.21	₱147,287.97
2026	Jan	₱27,810.18	₱2,401.00	₱1,500.00	₱2,472.02	₱34,183.20	₱181,471.17
	Feb	₱27,974.61	₱109.00	₱1,500.00	₱2,486.63	₱32,070.25	₱213,541.41
	Mar	₱7,073.84	₱109.00	₱1,500.00	₱628.79	₱9,311.63	₱222,853.04
	Apr	₱6,225.61		₱1,500.00	₱1,136.85	₱8,862.47	₱231,715.51
Total		₱189,561.16	₱3,721.00	₱21,000.00	₱17,433.35	₱231,715.51	

Effort Cost

Table 9 outlines the estimated labor costs for different project roles. It breaks down the costs into three main categories: communication, meeting, and reporting, then calculates the total cost for each position. The roles included are Project Manager, Project Sponsor, System Programmer, System Analyst, System Designer, and System Tester. Among these, the System Analyst incurs the highest total cost at ₱4,646.46, while the Project Sponsor has the lowest at 0. The total effort cost for all roles combined amounts to ₱14,726.23.

Table 9. Effort Cost

Position	Communication	Meeting	Reporting	Total
Project Manager	₱1,992.27	₱996.13	₱199.23	₱3,187.63
Project Sponsor	-	-	-	-
System Programmer	₱2,142.42	₱1,071.21	₱214.24	₱3,427.87
System Analyst	₱2,904.04	₱1,452.02	₱290.40	₱4,646.46
System Designer	₱1,515.15	₱757.58	₱151.52	₱2,424.24
System Tester	₱650.02	₱325.01	₱65.00	₱1,040.03
TOTAL				₱14,726.23

Table 10 presents the list of the hardware needed for the project and their costs. It includes the item name, quantity, unit cost, and total cost. Some items, like the laptops, already exist and are not included in the total cost. The table ends with the total cost of ₱2,555.00.

Table 10. Hardware

Hardware	Quantity	Unit Cost	Total Cost
13.56 MHz 125Khz USB Proximity Sensor Smart Contactless RFID ID Card Reader	3	₱469.00	₱1,407.00
ASUS L410 Laptop	3	₱11,900.00	Already Existing
RFID / NFC Card - MIFARE Classic 13.56 MHz Proximity Card 125Khz 10 pcs	7	₱164.00	₱1,148.00
TOTAL			₱2,555.00

Table 11 presents the list of actual software used for the project and their costs. It includes the software name, quantity, and actual cost. Most items, such

as XAMPP, PHP Laravel, and Visual Studio Code, are free tools, meaning only the domain name and web hosting incur expenses. The table ends with the total cost of ₱948.00. Overall, it provides a clear summary of the software requirements and the project's cost-effective approach.

Table 11. Software

Software	Quantity	Actual Cost
Domain Name	1	₱509.00
Web Hosting	1	₱439/month
XAMPP	1	Free
PHP: Hypertext Preprocessor	1	Free
VSCode: Visual Studio Code	1	Free
SSL Certificate	1	Free
TOTAL		₱948.00

Financial Viability

Once the PAG-ILA system is implemented, maintaining its financial viability becomes a key priority by ensuring continuous and efficient HR service delivery. This involves monitoring operational costs such as employee management, performance assessment management, leave request management, activities schedule management, attendance tracking, and report generation by calculating the time spent on each system-supported activity and aligning it with the corresponding personnel rates. Through this process, the organization can evaluate the cost-effectiveness of these functions while enhancing workforce productivity. By streamlining HR processes, reducing manual workload, and improving decision-making through organized data, PAG-ILA supports sustainable operations and ensures that financial resources are utilized efficiently over time.

Table 12 shows a comparison between the current manual processes of Penong's and the proposed PAG-ILA system, highlighting significant time savings across key HR tasks. In the existing process, employee management takes approximately 12 minutes, attendance tracking 15 minutes, leave request management 10 minutes, performance assessment management 12 minutes, and activity scheduling 8 minutes, resulting in a total of around 57 minutes.

With the implementation of PAG-ILA, these tasks are streamlined: employee management is reduced to 4 minutes, attendance tracking to 5 minutes, leave request management to 3 minutes, performance assessment management to 4 minutes, and activity scheduling to 2 minutes, totaling approximately 18 minutes.

Table 12. Time Spent: Current and Proposed Process

Process	Current	Proposed	Difference
Employee Management Process	12 minutes	4 minutes	8 minutes
Attendance Process	15 minutes	5 minutes	10 minutes
Leave Request Management Process	10 minutes	3 minutes	7 minutes
Performance Assessment Management Process	12 minutes	4 minutes	8 minutes
Activity Scheduling Process	8 minutes	2 minutes	6 minutes

The total yearly savings from the PAG-ILA system can be determined by subtracting the costs of the current manual HR processes from those of the proposed automated system. The following tables present the cost breakdown of the existing Penong's HR processes and the planned PAG-ILA system, respectively. By comparing both setups, the analysis highlights how the proposed system reduces labor time, minimizes administrative workload, and improves overall operational efficiency, resulting in lower annual operational expenses and significant cost savings for the organization.

Table 13. Expenses Current Process

Process	HR Personnel (500/per hour) [30]	Total
Employee Management Process	12 minutes	₱100.00
Attendance Tracking Process	15 minutes	₱125.00
Leave Request Management Process	10 minutes	₱83.33
Performance Assessment Management Process	12 minutes	₱100.00
Activity Scheduling Process	8 minutes	₱66.67
TOTAL		₱475.00

Table 14. Expenses Proposed Process

Process	Management Staff (200 per hour) [29]	Total
Employee Management Process	4 minutes	₱13.33
Attendance Tracking Process	5 minutes	₱16.67
Leave Request Management Process	3 minutes	₱10.00

Performance Assessment Management Process	4 minutes	₱13.33
Activity Scheduling Process	2 minutes	₱6.67
TOTAL		₱60.00

Table 15 shows the overall savings from process optimization utilizing the suggested system per year is **₱122,005.00**.

Table 15. Cost per Year: Current vs. Proposed Process

Process	Cost per Transaction	Average Minutes per Day	Cost per Day	Cost per Year
Current System	₱475.00	57 minutes	₱451.25	₱117,325.00
Proposed System	₱60.00	18 minutes	₱18.00	₱4,680.00
TOTAL	₱535.00		₱469.25	₱122,005.00

To determine the total monthly savings, the annual savings of ₱122,005.00 will be divided by twelve (12), yielding a monthly savings of 10,167.09. Projecting for the next twenty-four (24) months, the project's overall costs and cumulative savings are summarized as shown in Table 16.

Table 16. Cost per Year: Cumulative Cost vs. Cumulative Savings

Year	Month	Cost	Savings	Cumulative Savings
2025	Mar	₱162,388.09	₱10,167.09	₱10,167.09
	Apr		₱10,167.09	₱20,334.18
	May		₱10,167.09	₱30,501.27
	Jun		₱10,167.09	₱40,668.36
	Jul		₱10,167.09	₱50,835.45
	Aug		₱10,167.09	₱ 61,002.54
	Sep		₱10,167.09	₱71,169.63
	Oct		₱10,167.09	₱81,336.72
	Nov		₱10,167.09	₱91,503.81
	Dec		₱10,167.09	₱101,670.90
2026	Jan		₱10,167.09	₱111,837.99
	Feb		₱10,167.09	₱122,006.08
	Mar		₱10,167.09	₱132,172.17
	Apr		₱10,167.09	₱142,339.26

J. Project Management Plan and Tracking

The project management plan and tracking section is an integral part of this process, which includes a range of critical elements. These elements include stakeholder analysis, project charter, RACI chart, risk management plan, and project closure plan.

Stakeholder Analysis

These stakeholders interact to ensure efficient employee management, accurate attendance tracking, and improved HR processes. The table lists the most essential stakeholders in the organization who will contribute to and benefit from the PAG-ILA project. The project's stakeholders will act as a link between the current manual system and the digital improvements brought by the new system.

Table 17. Stakeholders Analysis

Stakeholders Name	Contact Person	How much does the project impact them?	How much influence do they have over the project?	What is important to the stakeholder?	How could the stakeholder contribute to the project?	How could the stakeholder block the project?	Strategy for engaging the stakeholder
Employee		<i>High</i>	<i>Low</i>	Fair tracking, ease of use, and privacy.	Use RFID for attendance, leave requests, and view schedule.	Reject or misuse the system.	Orientation and clear benefits explanation.
Management Staffs	Rolando Mahupay, Christian Duane, and Daniel Astilla	<i>High</i>	<i>Medium</i>	Efficient staff monitoring and operations.	Implement the system on-site, ensure compliance.	Fail to train or monitor employee use.	Regular meetings and role-based system training.
HR Personnel	Rhenna Joy Caballero, and Florebelle Banquiso	<i>High</i>	<i>High</i>	Accuracy in attendance, leave, activities schedules, and evaluation.	Maintain records and assessments	Resistance to digital transition.	Training, and onboarding, highlight benefits
Assistant Managing Director	Victor Y. Bonalos	<i>High</i>	<i>Medium</i>	Support management and HR tasks.	Help coordinate between branches.	Without cooperation in rollout.	Involve in planning and system demo.
Managing Director	Houbert Rhygan Uy	<i>High</i>	<i>High</i>	Oversee operations and project ROI.	Authorize project implementation and budget.	Delay approval or reject system adoption.	Communicate value and ROI of RFID system.

Project Charter

In this project charter, PAG-ILA aims to improve the efficiency and accuracy of human resource tasks at Penong's Barbecue Seafoods & Grill. It enhances employee management by automating attendance, leave requests, and performance evaluations. The project was successful, with the team ensuring it met the company's needs and supported a smooth transition from manual to digital systems.

Table 18. Project Charter

Project Name: A web-based human resource management system for Penong's Barbecue Seafoods & Grill, designed to automate employee attendance using RFID, streamline leave requests, and centralize performance assessments and event tracking across multiple branches.		
Project Objectives:	The main goal of this project is to create a system that makes it easy to manage employee information. It will help track attendance using RFID, handle leave requests, and manage employee performance records. It will also organize activities such as events, training sessions, and seminars, ensuring schedules are updated. Moreover, it will safely store employee data and generate reports about attendance and leave, as well as evaluations to help managers make better decisions.	
Project is considered successful when:	The system is deployed across Penong's three branches. Attendance tracking, performance evaluation, and leave processes are fully digitized and error-free. Management reports improved efficiency and reduced manual workload by at least 50%.	
Project participants:	Title: Project Sponsor: Project Manager:	Name: V́ctor Y. Bonalos Angel G. Bonalos

	System Programmer: System Analyst: System Designer:	Vohn Carlo R. Cabaluna Christine Joy Cadavos Marilou A. Verano
Available Resources:	Budget: ₱231,715.51 Testing Devices: Desktop Computers/Laptops, RFID IDs, and Scanners	
Potential Risks:	1. There is a chance that the RFID scanner might not work correctly, causing employees to have trouble checking in and out. 2. If the system goes down, it could delay important tasks such as approving leaves or tracking attendances. 3. Some employees might forget their RFID cards, making it hard to record their attendance properly. 4. If data is not backed up regularly, important information such as attendance records and leave requests could be lost. 5. If all users did not understand how to use the system, it could lead to mistakes or delays. 6. The system might not constantly update in real-time, which could confuse who is present or on-leave. 7. If proper security measures are not taken, someone might be able to access employee information. 8. The system might not work smoothly with other tools or processes already being used at Penong's, causing extra work.

RACI Chart

The RACI Chart is a tool that aligns an organization's activities or decision-making authority with its individuals or roles. In Table 19, each action or decision is mapped against its corresponding position, and the chart indicates who is responsible, accountable, consulted, and informed for each intersection of role and activity.

Table 19. RACI Chart

Legends						
R-Responsible	Assigned to complete the given tasks.					
A-Accountable	Has the final decision – making and accountant. Only one person task.					
C-Consulted	An adviser and shareholder in decision making.					
I-Informed	Must be informed about the decision and action.					
PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for Penong’s Barbecue Seafoods & Grill

E. Risk Management Plan

The organization may encounter challenges during the development and implementation of a new system. For Penong's Barbecue Seafoods & Grill, initiating the PAG-ILA: Human Resource Management System with Attendance Monitoring using RFID may introduce risks, particularly if the organization is unprepared for system changes and technological upgrades. Table 20 presents the risk management plan, identifying potential hazards, their likelihood and

severity, and the proposed solutions to address these challenges effectively and ensure the project's success.

Table 20. Risk Management Scale

Legends		
Likelihood	Severity	Equivalent
4 – Major	4 – Majority	7 – 10 – High Risk
3 – Moderate	3 – Moderate	4 – 6 – Medium Risk
2 – Unlikely	2 – Minor	1 – 3 – Low Risk
1 – Rare	1 – Negligible	

The organization may encounter challenges during the development and implementation of a new system. For Penong's Barbecue Seafoods & Grill, initiating the PAG-ILA: Human Resource Management System with Attendance Monitoring using RFID may introduce risks, particularly if the organization is unprepared for system changes and technological upgrades. Table 21 presents the risk management plan, identifying potential hazards, their likelihood and severity, and the proposed solutions to address these challenges effectively and ensure the project's succe

Table 21. Risk Management Plan

No	Objectives	Issues	Risk	Type of Risk	Likelihood	Severity	Equivalent	Proposed action
7	Generate daily time record, performance assessment, leave requests, and activities.	System bottlenecks or reporting inaccuracies.	Delays in HR decisions and inaccurate reports.	Project risk	3	4	8 (High)	Optimize reporting modules and schedule off-peak report generation times.
6	Management Staff evaluate performance, manage activities, and notify employees, then HR Personnel approves.	Delay in communication or missed notification.	Decreased employee usage.	Product risk	3	3	9 (High)	Integrate multi-channel notifications (SMS, email, app push) and confirm message deliveries.
5	Employee manages personal information, monitor leave status, and view the calendar activities.	Unauthorized access or outdated information displayed.	Miscommunication regarding schedules and leave approvals.	Personal risk	3	2	6 (Medium)	Secure employee self-service portal with real-time updates and notifications.

4	HR Personnel manages employee registration.	System crashes during data updates.	Data loss or corrupted employee file.	Technical risk	2	4	8 (High)	Enable automatic data back-up and transaction logging to recover from system failures.
3	HR Personnel approved endorsed employees, and Management Staffs endorse employees to evaluate.	Inconsistent evaluation standards or system glitches.	Unfair or inaccurate employee assessment	Management risk	3	3	9 (High)	Develop standardized rating templates and training sessions for evaluators.
2	Enable employees to check in and out using RFID and apply leave requests.	RFID hardware failure or system downtime.	Incomplete attendance logs and leave requests errors.	Technical risk	2	4	8 (High)	Regular maintenance checks on RFID equipment and back-up attendance methods
1	Allow HR Personnel to register users and manage information.	Data input mistake or unauthorized edits.	Inaccurate employee records.	Personal risk	3	3	9 (High)	Implement user authentication, regular data audits, and limit role-based access permissions.

F. Project Closure Plan

This section details the project closure plan for the PAG-ILA. It outlines the process for finalizing all project activities, verifying that all objectives have been met, and formally closing out the project. The plan includes reviewing project goals against actual achievements, completing necessary documentation, and ensuring a smooth transition of the system. This comprehensive approach aims to provide a structured method for project completion and to capture lessons learned for future endeavors.

Table 22. Project Closure Plan

Project Name	PAG-ILA: Human Resource Management System with Attendance Monitoring using RFID for Penong’s Barbecue Seafoods & Grill			
Brief Description	PAG-ILA is a Human Resource Management System built to make work easier and more efficient for Penong’s Barbecue Seafoods & Grill . It helps track employee attendance with RFID technology, making time-ins and time-outs faster and more accurate. It also simplifies leave requests, automates performance evaluations, and organizes event tracking. By moving away from manual, paper-based processes, PAG-ILA reduces human errors and boosts efficiency across all branches, helping the team focus more on what they do best —serving great food and creating great experiences.			
Project Sponsor	Penong’s Barbecue Seafoods & Grill			
Prepared By	BSIS – Capstone Students			
Objectives Achievement				
Objective	Description	Performance	Not Achieved	Achieved
Attendance Monitoring	Employees can check in/out using RFID for real-time attendance tracking.	✓		✓
Leave Request Management	Employees can submit leave requests digitally and monitor approval status. A Manager/Assistant Manager and an HR/Assistant HR can both manage the request.	✓		✓
Performance Assessment	Managers/Assistant Managers can evaluate employees’ performance through the system after HR/Assistant HR approves the employees endorsed by the Manager/Assistant Manager.	✓		✓
Event Tracking	Both HR/Assistant HR and Manager/Assistant Manager can manage and notify employees about activities, then HR/Assistant HR will approve if the Manager/Assistant Manager adds an activity.	✓		✓

G. System Analysis

System analysis is acquiring, interpreting, and analyzing factual evidence. The methods entail assessing defects and offering realistic recommendations for improving system performance. It requires researching business functions, gathering data sets, and comprehending them to accomplish company objectives. Information flow should be optimized by detecting bottlenecks and developing plans to reduce system defects.

System Requirements (Functional and Non-functional)

This presents the key system requirements for the PAG-ILA system, practical and user-friendly for Penong's Barbecue Seafoods & Grill. It was designed with a set of key features and expected behaviors. These are grouped into functional requirements, which describe what the system should do, and non-functional requirements, which describe how the system should perform.

A. Functional Requirements

These are the core features the system must deliver to meet the needs of the HR Personnel, Management Staff, and Employees.

Attendance and Employee Management

- HR Personnel are allowed to register all users, including employees and management staff.
- Personal information for all users can be managed by the HR Personnel after user registration.
- Unique ID numbers are assigned and managed by the HR Personnel.
- Role-based access is managed only by the HR Personnel during user registration.
- Branches, shifts, employment roles, and positions are assigned and managed by the HR Personnel.
- HR Personnel are allowed to manage the user list by adding, viewing, updating, and deleting user records.

- Management Staff are allowed to manage employees' shifts and employment roles.
- Employees are allowed to time in and out using RFID to validate attendance.
- Employees can manage their personal information after their accounts have been registered by the HR Personnel.
- Employees can generate and view their Daily Time Record (DTR).
- HR Personnel and Management Staff can track employees' attendance logs.
- Employees can view their own attendance logs.
- Attendance logs are automatically recorded in real-time and stored in the system database.

Leave Request Management

- Employees can apply for leave request based on their available leave credits.
- Employees can monitor remaining leave credits and the status of their request.
- New regulars are granted a maximum of five (5) days of leave, while old regular employees are granted a maximum of ten (10) days of leave.
- Each employee has ten (10) credits annually, of which five (5) for sick leave and five (5) for vacation leave.
- Management Staff are able to approve or decline employee leave requests.
- Employees are notified about updates and status on their leave application by Management Staff.
- HR Personnel are allowed to approve or decline employee leave requests.
- HR Personnel notifies employees regarding with leave requests status after decision-making.

Performance Assessment Management

- The Management Staff will endorse employees to HR Personnel before evaluating them for performance assessment.

- HR Personnel will approve endorsed employees by the Management Staff.
- Once approved by the HR Personnel, the Management Staff can access and evaluate performance assessments intended for employees' performance during the operation hours.
- The system automatically evaluates assessment scores, marking results below 10 for re-training and scores of 10 or higher as passed.

Activities Management

- Scheduled activities can be managed by both HR Personnel and the Management Staff. Still, these will be validated if the HR Personnel approves or rejects the schedules added by the Management Staff.
- Management Staff are able to record their completed activities.
- HR Personnel notifies users regarding with the scheduled activities.
- Employees must click the “Attend” button in the calendar activity form to validate participation.
- Participation and completion of events are tracked and stored in all users’ records.
- The system displays a calendar of activities that is visible on the dashboards of all users.

Activity Logs

- HR Personnel are allowed to view all users’ activity logs.
- Management Staff are able to view employee logs.

Generate Reports

- HR Personnel and Management Staff can generate the following: detailed activities attendance reports of employees, daily time record or DTR, employee’s performance assessment (PA) reports, completed activities reports, leave request reports, and a list of users.
- Employees are able to generate daily time record or DTR and leave request reports only.

B. Non-Functional Requirements

These describe how the system should operate behind the scenes to ensure a smooth user experience.

Usability

- The system must feature a user-friendly and intuitive interface that supports minimal training time for employees, managers, and admins.
- The system must be accessible through modern web browsers (e.g. Microsoft Edge, Chrome).
- Notifications, errors, and feedback messages must be clear and concise to avoid confusion.

Technical

- The system must use PHP, XAMPP, and MYSQL for backend operations and database management.
- RFID hardware must accurately and reliably read employee attendance within 2 seconds of scanning.

Security

- The system must enforce role-based access control (HR Personnel, Management Staff, and Employee) to restrict sensitive operations.
- Employee personal information must be secured and encrypted within the database.
- HR Personnel and Management Staff must authenticate via secured login to access sensitive modules.
- Archived records will not be retained before permanent deletion, unless retrieved or restored.

Performance

- Attendance logging must respond within 2–5 seconds after RFID card scanning.
- The system must support simultaneous login and usage by at least 50 users without slowing down.
- System data must be automatically backed up daily to prevent data loss.

- The system should maintain 99% uptime during working hours (9 AM – 10 PM).

Process Model: Use Case Diagram

The diagram presents a Use Case Diagram of an Employee Management System with three main actors: Management Staff, HR Personnel, and Employees. The system allows employees to record their time in and out using RFID, apply for leave requests, monitor their leave credits and status, view attendance logs, check calendar activities, and access their daily time record reports.

The Management Staff is responsible for supervising employee-related processes such as endorsing employees for evaluation, approving endorsed employees, submitting performance ratings, managing leave applications, reviewing and approving activities, and viewing activity and attendance logs. They can also manage activities and schedules within the system.

The HR Personnel handle administrative functions, including employee registration, user management, and monitoring logs and schedules. They also generate various system reports such as daily time record reports, leave request reports, activity reports, performance assessment reports, activities attendance reports, and the user list.

Figure 12. Use Case Diagram

Table 23. Evaluate Employees

Use Case Name	Evaluate Employees
Participating Actors	Management Staff
Flow of Events	• Management Staff selects employees to evaluate. • System displays endorsed employees. • Management Staff submits performance ratings. • System records and stores evaluation results.

Entry conditions	• Employees must be endorsed for evaluation.
Exit conditions	• Employee performance ratings are saved.
Quality requirements	• Accurate performance data recording. • Fast submission and secure access to evaluation data.

Table 24. Endorse Employees

Use Case Name	Endorse Employees
Participating Actors	Management Staff
Flow of Events	• Management Staff selects employee. • Endorses employees for evaluation. • System forwards endorsed list for approval.
Entry conditions	• Employees exist in the system.
Exit conditions	• Employees are endorsed for evaluation.
Quality requirements	• Easy selection and reliable endorsement tracking.

Table 25. Approve Endorsed Employees to Evaluate

Use Case Name	Approve Endorsed Employees to Evaluate
Participating Actors	HR Personnel
Flow of Events	• HR reviews endorsed employees. • HR approves or rejects endorsements. • Approved employees proceed to evaluation.
Entry conditions	• Employees must be endorsed.
Exit conditions	• Employees are approved or rejected for evaluation.

Quality requirements	• Clear approval workflow and accurate status update.
-----------------------------	---

Table 26. Manage Leave Application

Use Case Name	Manage Leave Application
Participating Actors	Employee, Management Staff, HR Personnel
Flow of Events	• Employee submits leave request. • System checks leave credits. • Management Staff and HR Personnel review the request. • Request is either approved or rejected. • System updates leave status and credits.
Entry conditions	• Employee is registered and logged in.
Exit conditions	• Leave request status is updated.
Quality requirements	• Real-time updates. • Accurate leave tracking.

Table 27. Apply Leave Request

Use Case Name	Apply Leave Request
Participating Actors	Employee
Flow of Events	• Employee fills out leave form. • Employee submits request. • System records the request.
Entry conditions	• Employee is logged in.
Exit conditions	• Leave request is submitted.
Quality requirements	• Simple and responsive form.

Table 28. Monitor Leave Credits and Status

Use Case Name	Monitor Leave Credits and Status
Participating Actors	Employee
Flow of Events	- Employee views leave dashboard. - System displays leave credits and status.
Entry conditions	Employee account exists.
Exit conditions	Leave details are displayed.
Quality requirements	Accurate and real-time data display.

Table 29. Time In and Out using RFID

Use Case Name	Time In and Out using RFID
Participating Actors	Employee
Flow of Events	- Employee taps RFID card. - System records time in/out. - Data is stored in attendance logs.
Entry conditions	RFID card is registered.
Exit conditions	Attendance is recorded.
Quality requirements	- Fast and accurate scanning. - Reliable hardware integration.

Table 30. View Attendance Logs

Use Case Name	View Attendance Logs
Participating Actors	HR Personnel, Management Staff, Employee
Flow of Events	User accesses attendance logs.

	• System displays records.
Entry Conditions	• Attendance data exists.
Exit Conditions	• Logs are viewed.
Quality Requirements	• Organized and searchable logs.

Table 31. View Activity Logs

Use Case Name	View Activity Logs
Participating Actors	HR Personnel, Management Staff
Flow of Events	• User opens activity logs. • System displays system activities.
Entry conditions	• Activity record exists.
Exit conditions	• Logs are displayed.
Quality requirements	• Detailed and accurate logs.

Table 32. Manage Employee Shifts

Use Case Name	Manage Employee Shifts
Participating Actors	HR Personnel, Management Staff
Flow of Events	• User assigns shifts. • System saves schedule. • Employees can view assigned shifts.
Entry conditions	• Employees are registered.
Exit conditions	• Shifts are updated.
Quality requirements	• Clear schedule separation. (First/Second Shifts)

Table 33. Manage Personal Information

Use Case Name	Manage Personal Information
Participating Actors	HR Personnel, Management Staff, Employee
Flow of Events	• User edits profile. • System validates input. • Changes are saved.
Entry conditions	• User is logged in.
Exit conditions	• Information is updated.
Quality requirements	• Secure data handling.

Table 34. Manage Activities and Schedules

Use Case Name	Manage Activities and Schedules
Participating Actors	HR Personnel, Management Staff
Flow of Events	• User creates or edits activities. • System stores schedules. • Activities are submitted for approval.
Entry conditions	• User has permission.
Exit conditions	• Activities are saved or updated.
Quality requirements	• Calendar synchronization.

Table 35. View Calendar Activities

Use Case Name	View Calendar Activities
Participating Actors	Employee
Flow of Events	• Employee view calendar. • System displays scheduled activities.
Entry conditions	• Activities exist.
Exit conditions	• Calendar is viewed.
Quality requirements	• Real-time updates.

Table 36. Manage Employee Registration

Use Case Name	Manage Employee Registration
Participating Actors	HR Personnel
Flow of Events	• HR inputs employee details. • System validates data. • Account is created.
Entry conditions	• HR is authorized.
Exit conditions	• Employee account is registered.
Quality requirements	• Secure and validated registration.

Table 37. User Management

Use Case Name	User Management
Participating Actors	HR Personnel
Flow of Events	• HR manages user roles and access. • System updates permissions.

Entry conditions	• Users exist in system.
Exit conditions	• User roles are updated.
Quality requirements	• Role-based access control.

Table 38. Daily Time Record

Use Case Name	Daily Time Record
Participating Actors	Employee
Flow of Events	• System collects attendance logs. (RFID) • System-generated DTR automatically. • Employee can view and download DTR records.
Entry conditions	• Attendance logs must exist.
Exit conditions	• DTR is generated and viewable.
Quality requirements	• Accurate time computation. • Real-time updates.

Table 39. Leave Request

Use Case Name	Leave Request
Participating Actors	Employee
Flow of Events	• Employee selects leave request report. • System compiles leave data. • Report is generated.
Entry conditions	• Leave data exists.
Exit conditions	• Report is available.
Quality requirements	• Accurate data aggregation.

Table 40. Generate Reports

Use Case Name	Generate Reports
Participating Actors	HR Personnel, Management Staff, Employee
Flow of Events	• User selects report type. • System gathers data. • System generates report (attendance, leave, performance, etc.) • User views or downloads report.
Entry conditions	• Data is available.
Exit conditions	• Report is generated.
Quality requirements	• Accurate and fast report generation.

Process Model: Activity Diagram

Figure 13 depicts a flowchart showing the RFID scanning process, divided into two columns: Employee and PAG-ILA. The process begins when the employee scans their RFID ID, which prompts the system to check the ID's validity and status. If the system determines the person is not a registered employee, it displays an error message. If the person is a registered employee, the system displays the time in and out on their Daily Time Record (DTR), updates the dashboard, and notifies the user before ending the process.

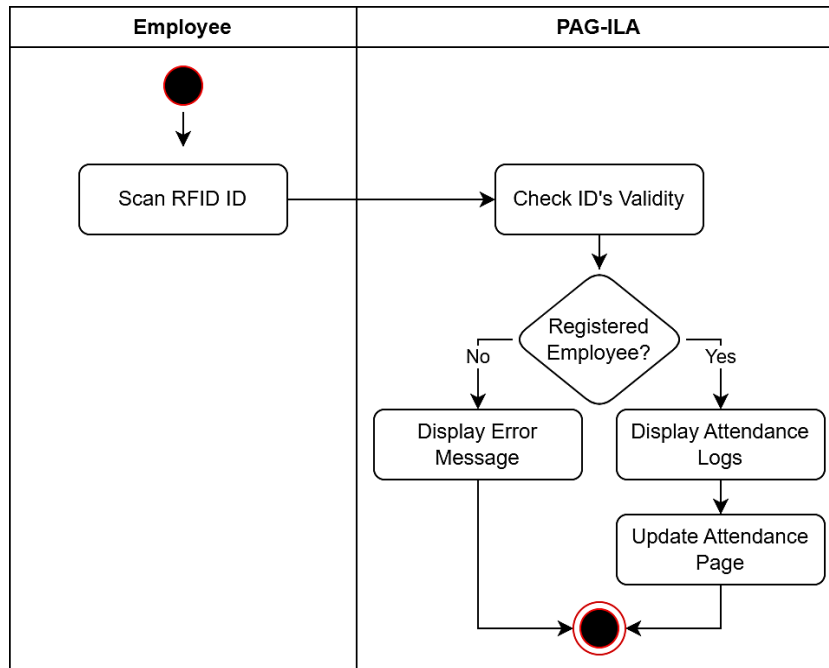

Figure 13. RFID Attendance Activity Diagram

Figure 14 illustrates the Integrated Leave Request process of the PAG-ILA system involving the employee, PAG-ILA system, Management Staff, and HR Personnel. The process begins when an employee submits a leave request through the system. PAG-ILA then checks whether the employee has available leave credits. If there are credits available, the leave is processed as leave with pay; otherwise, it is considered leave without pay. The system then grants the request and determines the employee's status—whether the employee is a new regular or an old regular. New regular employees are allowed a maximum of 5 days of leave, while old regular employees are granted up to 10 days of leave. After this validation, the system notifies the management staff for review. The management staff evaluates the request based on the validity of the reason and either approves or declines the request. Once a decision is made, the system sends notifications to the employee and HR personnel, allowing the employee to receive the final update regarding their leave request.

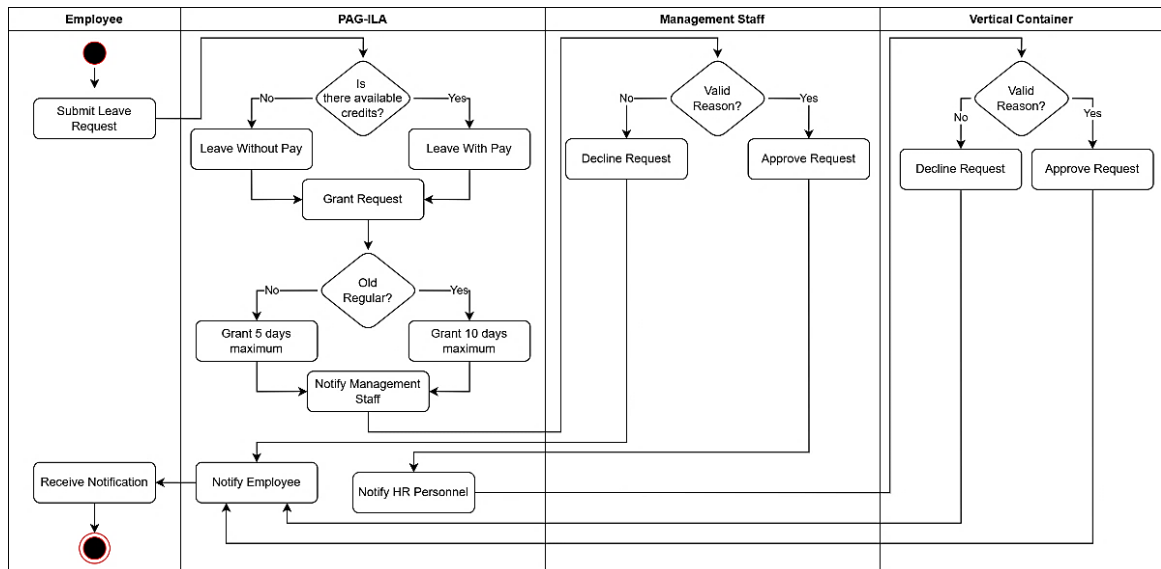

Figure 14. Leave Request Activity Diagram

Figure 15 depicts a performance evaluation workflow involving three columns: Manager/Assistant, the PAG-ILA system, and HR/Assistant. The process begins when the Manager/Assistant endorses employees to be evaluated, a step that requires approval from the HR/Assistant. Once approved, the manager/assistant evaluates the employees, and the system automatically calculates and records the ratings. The system then checks if the rating is below 10; if yes, the status is set to "Undergo Re-train," but if no, the employee is marked as "Passed". Finally, the system stores the evaluation record to complete the process.

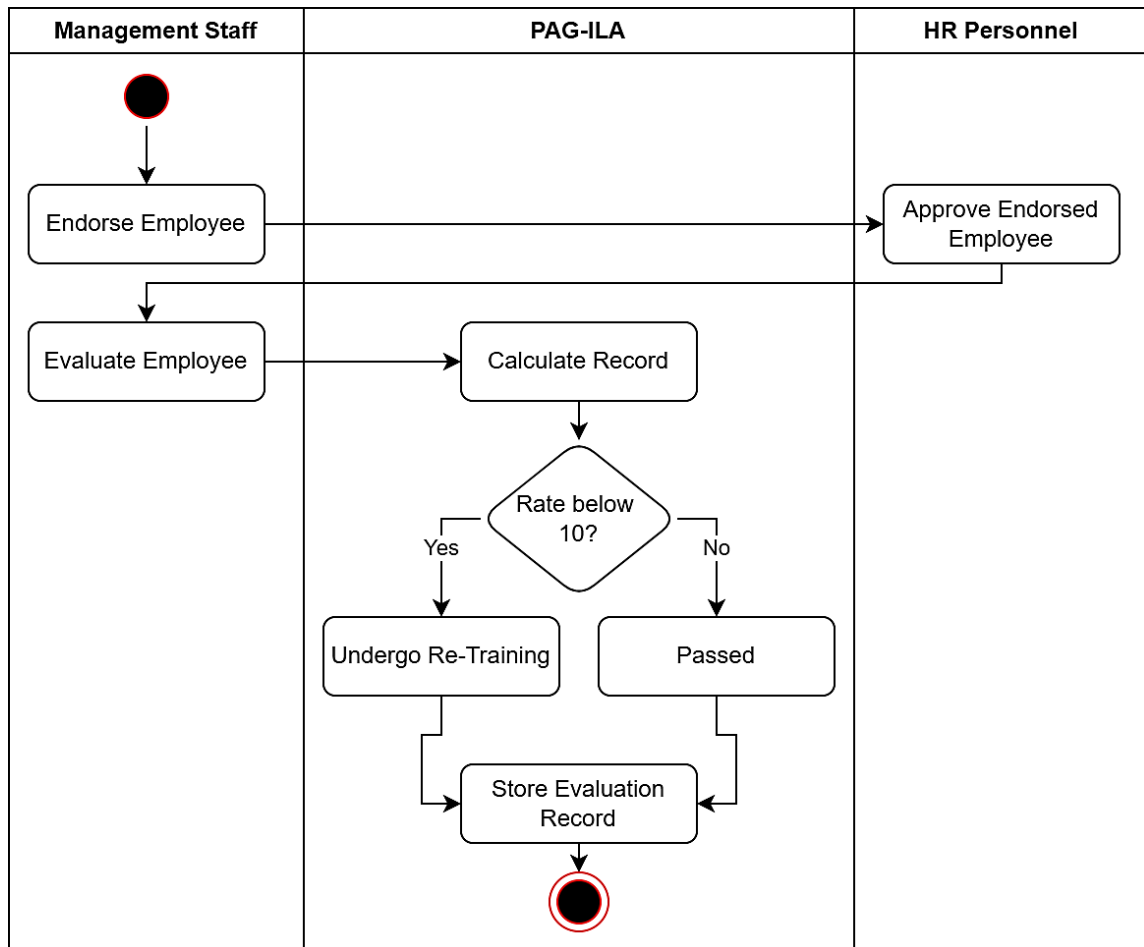

Figure 15. Performance Assessment Activity Diagram

Data Model: Context Data Flow Diagram Level 0

The Human Resource Management System with Attendance Monitoring using RFID (PAG-ILA) is designed to automate and streamline essential HR processes, particularly attendance logging, leave management, and employee evaluations. Figure 16 depicts a Context Diagram (Level 0 Data Flow Diagram) that highlights the importance of the PAG-ILA system as a centralized platform that connects employees, management staff, and HR personnel. It streamlines key processes such as attendance tracking, leave management, employee records, and activity management. By enabling real-time data exchange and automated reporting, the system improves decision-making, transparency, and efficiency in managing workforce operations.

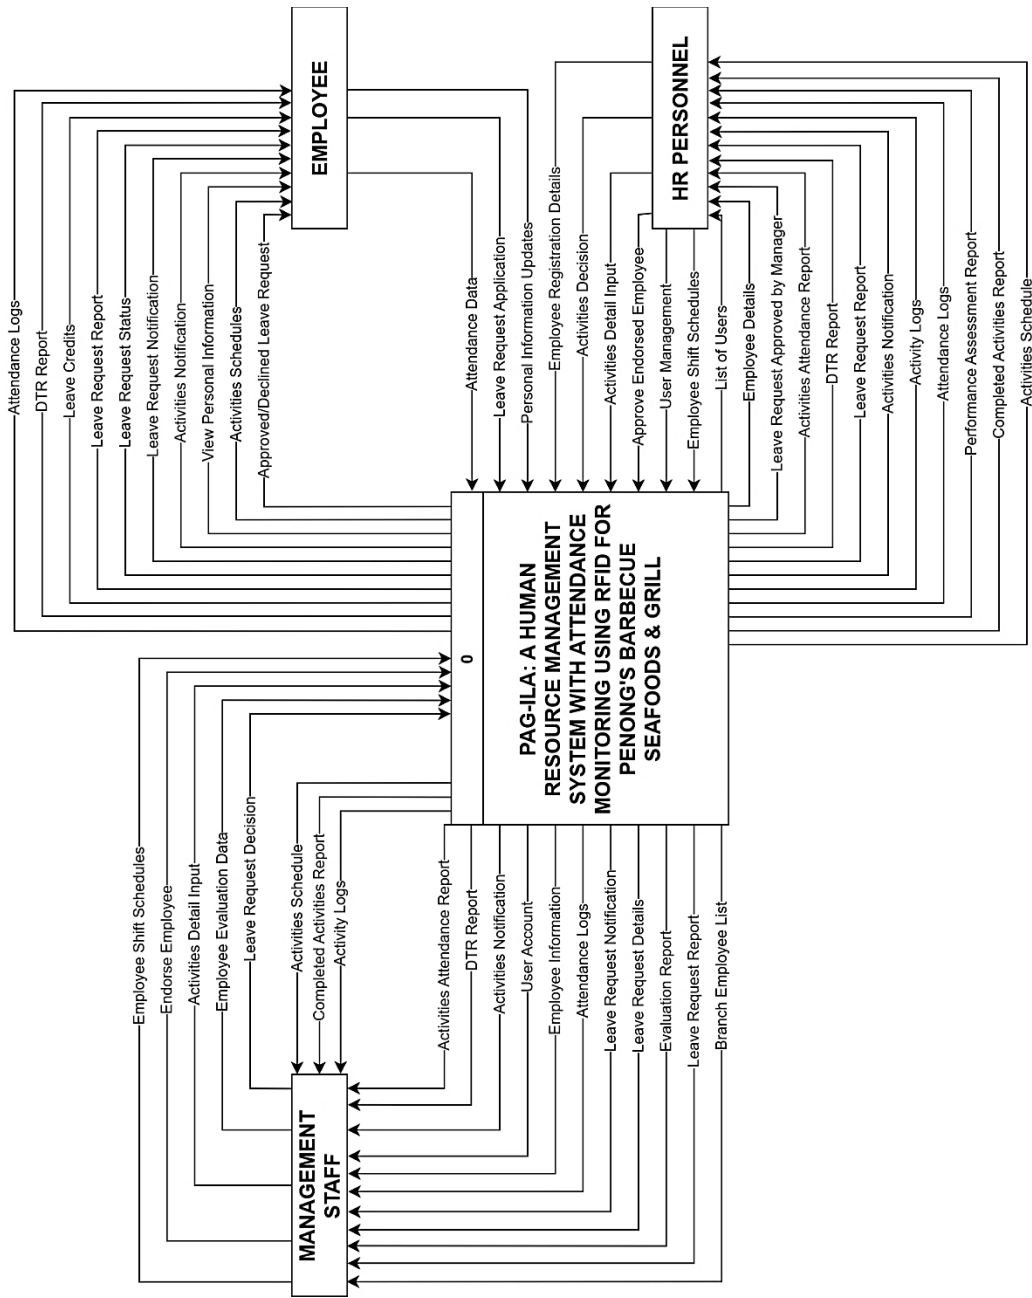

Figure 16. Context Flow Diagram Level 0

Data Model: Level 1 Data Flow Diagram

Figure 17 highlights the Data Flow Diagram, presenting how the PAG-ILA system efficiently handles processes by dividing them into key modules such as attendance tracking, leave management, performance assessment, activity management, user records, and reporting. It shows the continuous flow of data between employees, management staff, and HR personnel, all connected through a centralized database.

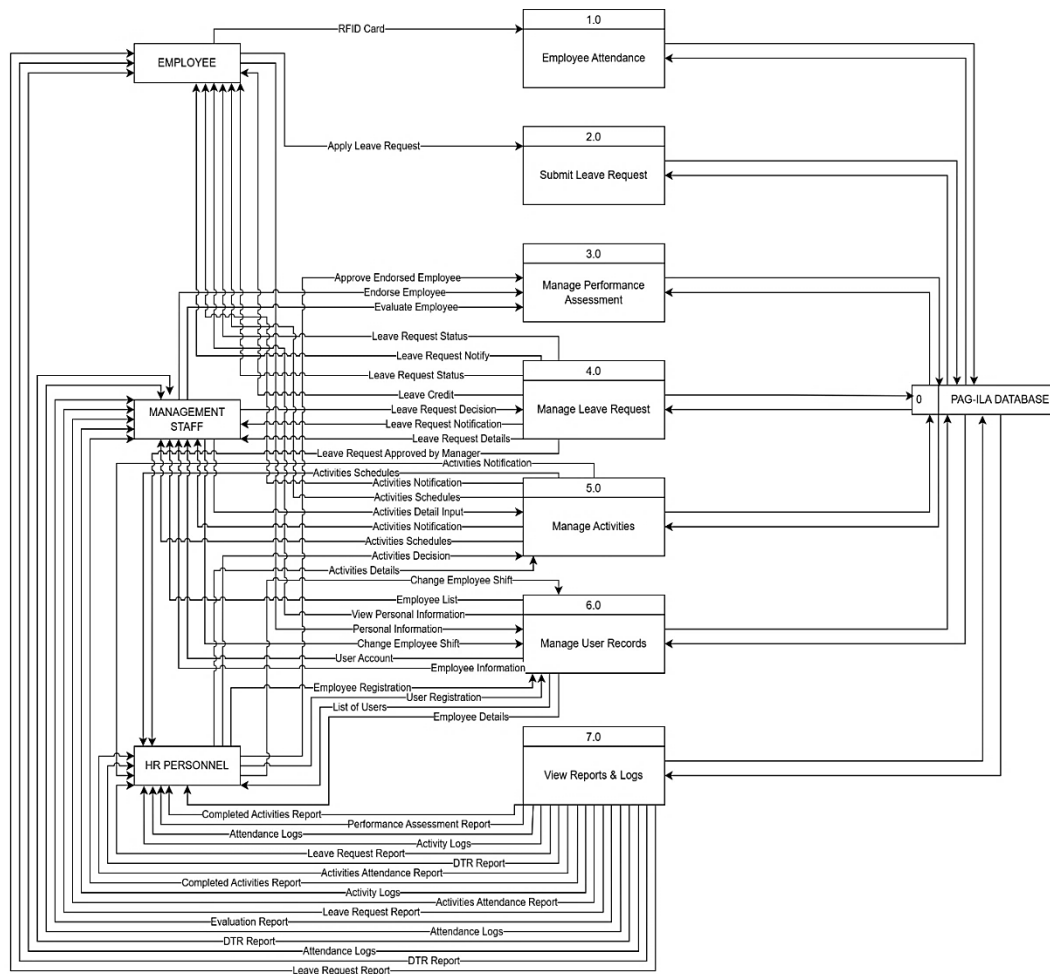

Figure 17. Data Flow Diagram Level 1

H. System Design

The system design process involves establishing system features, including modules, architecture, components, and their interfaces, as well as data for the Human Resource Management System (PAG-ILA) for Penong's Barbecue Seafoods & Grill. It involves developing and implementing plans to meet the organization's objectives and goals, including employee attendance monitoring using RFID across Sasa, Buhangin, and NHA branches.

Database Design: Entity Relationship Diagram

The entity-relationship diagram (ERD) is a straightforward visual representation of the entities, attributes, and relationships in a conceptual database. This figure depicts an Entity Relationship Diagram (ERD) that maps out the database structure for the system. It displays various data tables (depicted as boxes) such as employee, user, attendance, leave request, and performance assessments. Each box contains specific details—such as names, dates, and IDs—and uses connecting lines to illustrate how the tables are related. For example, the employee table connects to the branch table to show where they work, and to the attendance table to track their daily logs.

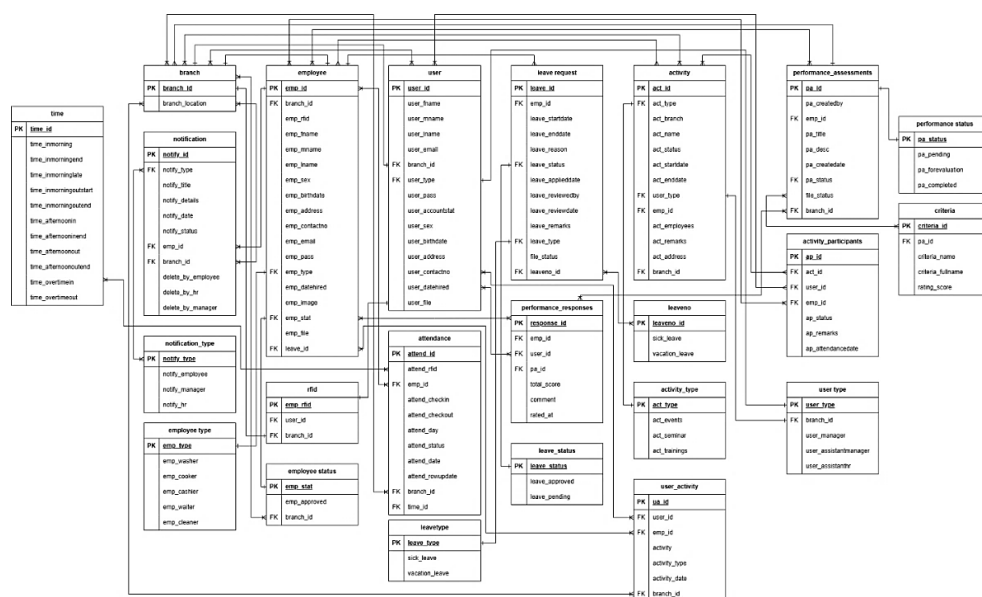

Figure 18. Entity Relationship Diagram

Data Dictionary

In this section, all entities/tables are presented in tabular format, showing each table's columns, keys, data types, and etc.

Table 41. Data Dictionary

Attributes	Data Type	Null	Description
Attendance			
attend_id (Primary)	int (11)	No	Unique attendance record ID
attend_rfid	varchar (200)	No	RFID associated with attendance
emp_id	int (11)	No	Employee ID linked to attendance
attend_checkIn	varchar (200)	No	Check-in time
attend_checkout	varchar (200)	No	Check-out time
attend_day	varchar (200)	No	Day of attendance
attend_status	varchar (200)	No	Status of attendance (e.g., present, absent)
attend_date	date	No	Date of attendance
attend_rowUpdate	int (11)	No	Record update version
branch_id	int(11)	No	Unique identifier assigned to each branch.
time_id	int(11)	No	An identifier for each time record.
Branch			
branch_id (Primary)	int(11)	No	Unique branch ID
branch_location	varchar(255)	No	Location/address of branch

Criteria			
criteria_id (Primary)	int(11)	No	Unique ID for criteria
pa_id	int(11)	No	Performance Assessment ID linked
criteria_name	varchar(200)	No	Name of the evaluation criteria
criteria_fullname	varchar(200)	No	Full name of employee
rating_score	varchar(200)	No	Score or scale for the criteria
Employee			
emp_id (Primary)	int(11)	No	Unique employee ID
Branch	int(11)	No	The branch where the employee works
emp_rfid	int(11)	No	Employee RFID number
emp_fname	varchar(200)	No	Employee first name
emp_mname	varchar(200)	No	Employee's middle name
emp_lname	varchar(200)	No	Employee last name
emp_sex	varchar(200)	No	Gender
emp_birtdate	date	No	Birthdate
emp_address	varchar(255)	No	Employee address
emp_contactno	varchar(200)	No	Contact number
emp_email	varchar(200)	No	Email address

emp_pass	varchar(255)	No	Password (hashed)
emp_type	varchar(200)	No	Type/category of employee
emp_datehired	date	No	Date hired
emp_image	varchar(255)	No	Image/file path of employee photo
emp_stat	varchar(200)	No	Employee status (active, inactive)
emp_file	varchar(200)	No	Employee document or file reference.
leave_id	int(11)	No	Unique identifier for each leave request.
Activity			
act_id (Primary)	int(11)	No	Unique activity ID
act_type	varchar(200)	No	Type/category of event
act_branch	varchar(200)	No	The branch where the event is held
act_name	varchar(200)	No	Name/title of the event
act_status	varchar(200)	No	Event Status
act_startDate	datetime	No	Event start date and time
act_endDate	datetime	No	Event end date and time
user_type	varchar(200)	No	Type of the user
emp_id	int(11)	No	Employee ID associated with the event

act_employees	varchar(200)	No	Employee involved in the event
act_remarks	varchar(200)	No	Remarks for the event
actt_address	varchar(255)	No	Event location
branch_id	int(11)	No	Status of event files
Activities_participants			
ap_id (Primary)	int(11)	No	Unique participant record ID
act_id	int(11)	No	Linked event ID
user_id	int(11)	No	User ID of the participant
emp_id	int(11)	No	Employee participant ID
ap_status	varchar(200)	No	Participant status (confirmed, pending)
ap_remarks	varchar(200)	No	Remarks about participation
ap_attendanceDate	date	No	Date of attendance for the event
Leaveno			
id (Primary)	int(11)	No	Unique leave ID
sick_leave	int(11)	No	Sick leave balance
vacation_leave	int(11)	No	Vacation leave balance
Leave_request			
leave_id (Primary)	int(11)	No	Unique leave request ID
emp_id	int(11)	No	Employee ID requesting leave
leave_startDate	date	No	Leave start date
leave_endDate	date	No	Leave end date
leave_reason	varchar(200)	No	Reason for leave

leave_status	varchar(200)	No	Leave approval status
leave_appliedDate	datetime	No	Date/time leave was applied
leave_reviewBy	varchar(200)	No	Person reviewing leave
leave_reviewDate	datetime	No	Date of review
leave_remarks	varchar(200)	No	Additional remarks on leave
leave_type	varchar(200)	No	Type of leave (e.g., sick, vacation)
file_status	varchar(200)	No	Status of the leave file
leaveno_id	int(11)	No	System-generated unique leave reference number.
Notification			
notify_id (Primary)	int(11)	No	Unique notification ID
notify_type	varchar(200)	No	Type/category of notification
notify_title	varchar(200)	No	Notification title
notify_details	varchar(200)	No	Details/content of notification
notify_date	date	No	Date notification was created
notify_status	varchar(200)	No	Notification status (read/unread)
emp_id	int(11)	No	Employee ID recipient
branch_id	int(11)	No	Unique code identifying each specific branch.
delete_by_employee	varchar(200)	No	Removes a record initiated by the employee.

delete_by_hr	varchar(200)	No	Erases an entry carried out under the authority of the HR department.
delete_by_manager	varchar(200)	No	Deletes a record triggered and approved by the assigned manager.
Performance_assessments			
pa_id (Primary)	int(11)	No	Unique performance assessment ID
pa_createdBy	varchar(200)	No	Creator of the assessment
emp_id	int(11)	No	Employee ID associated with the assessment
pa_title	varchar(200)	No	Title of the assessment
pa_desc	varchar(200)	No	Description of the assessment
pa_createdAt	datetime	No	Date/time created
pa_status	varchar(200)	No	Status of the assessment
file_status	varchar(200)	No	Status of the assessment files
branch_id	int(11)	No	Distinct branch identifier used for location tracking.
Performance_responses			
response_id (Primary)	int(11)	No	Unique response ID
emp_id	int(11)	No	Employee ID responding
user_id	int(11)	No	Manager/user ID rating
pa_id	int(11)	No	Performance assessment ID
total_score	decimal(11, 2)	No	Rating score given

comment	varchar(200)	No	Comments on performance
rated_at	datetime	No	Date/time rating was given
Time			
time_id (Primary)	int(11)	No	Unique time entry ID
time_inmorning	time	No	Morning check-in time
time_inmorningend	time	No	End of morning shift
time_morninglate	time	No	Morning late arrival time
time_morningOutStart	time	No	Morning break start time
time_morningOutEnd	time	No	Morning break end time
time_afternoonIn	time	No	Afternoon shift start time
time_afternoonInEnd	time	No	End of afternoon shift
time_afternoonOut	time	No	Afternoon break start time
time_afternoonOutEnd	time	No	Afternoon break end time
time_otIn	time	No	Over time, the start time
time_otOut	time	No	Over time, end time
User			
user_id (primary)	int(11)	No	Unique user ID
user_fname	varchar(200)	No	User's first name
user_mname	varchar(200)	No	User's middle name
user_lname	varchar(200)	No	User's last name

user_email	varchar(200)	No	User's email address
branch_id	varchar(200)	No	Exclusive identifier for each branch location.
user_type	varchar(200)	No	User's role or type (e.g., admin, employee)
user_pass	varchar(200)	No	User's password
user_accountStat	varchar(200)	No	Account status (e.g., active, inactive)
user_sex	varchar(200)	No	User's gender
user_birthdate	date	No	User's birthdate
user_address	varchar(200)	No	User's address
user_contactno	varchar(200)	No	User's contact number
user_datehired	varchar(200)	No	Date the user was hired
user_file	varchar(200)	No	Unique reference for individual user documents.
User_activity			
id	int(11)	No	Unique activity ID
user_id	int(11)	No	User ID performing the activity
emp_id	int(11)	No	Employee ID related to the activity
activity	varchar(200)	No	Activity performed
activity_type	varchar(200)	No	Type of activity (e.g., login, task completion)

activity_date	datetime	No	Date and time the activity was performed
branch_id	int(11)	No	A distinct code representing each branch in the system.
Notification_type			
notify_type	varchar(200)	No	Type of notification (e.g., info, alert, reminder).
notify_employees	varchar(200)	No	Indicates if employees should receive the notification.
notify_manager	varchar(200)	No	Indicates if managers should receive the notification.
notify_hr	varchar(200)	No	Indicates if HR should receive the notification.
Employee_type			
emp_type	varchar(200)	No	Defines the employee's main job role.
emp_washer	varchar(200)	No	A flag indicating the employee works as a washer.
emp_cooker	varchar(200)	No	Marks an employee responsible for cooking tasks.
emp_cashier	varchar(200)	No	An employee handling a cash transaction.
emp_waiter	varchar(200)	No	Employee in charge of attending to and serving guests.
emp_cleaner	varchar(200)	No	Responsible for keeping branch areas tidy and sanitized.
Rfid			
emp_rfid	int(11)	No	Unique RFID tag assigned to an employee for attendance tracking.

user_id	int(11)	No	A distinct identifier representing each branch location in the system.
branch_id	int(11)	No	Exclusive identifier for each system user account.
Employee_status			
emp_stat	varchar(200)	No	Current employment status of the employee
emp_approved	varchar(200)	No	Flag indicating if the employee is approved.
branch_id	int(11)	No	Unique code representing each branch location.
Leave_type			
leave_type	varchar(200)	No	The category of leave assigned to an employee.
sick_leave	varchar(200)	No	Leave granted for health recovery or medical needs.
vacation_leave	varchar(200)	No	Leave allotted for personal rest, travel, or leisure.
Leave_status			
leave_status	varchar(200)	No	Current approval state of an employee's leave request.
sick_approved	varchar(200)	No	Indicates that a medical leave has been formally authorized.
vacation_pending	varchar(200)	No	Indicates that a personal/vacation leave is awaiting approval.
Activity_type			
act_type	varchar(200)	No	Classification of activities or programs in the system.
act_events	varchar(200)	No	Represents scheduled events or special gatherings for employees.

act_seminar	varchar(200)	No	Denotes educational seminars designed to enhance skills or knowledge.
act_training	varchar(200)	No	Indicates structured training sessions aimed at developing employee competencies.
User_type			
user_type	varchar(200)	No	Defines the role classification of a system user.
branch_id	int(11)	No	An identifier linking a user to a specific branch location.
user_manager	varchar(200)	No	Marks a user with full managerial authority over branch operations.
user_assistantmanager	varchar(200)	No	Marks a user with delegated management responsibilities under the branch manager.
user_assistanthr	varchar(200)	No	Marks a user responsible for assisting human resource functions.

System Architecture

The new system architecture illustrates how RFID technology, the main system, and a centralized database collaborate to support human resource operations. Employees use RFID cards for attendance and access features, including leave requests, profile management, and report viewing. Management staff and HR personnel handle administrative tasks, including approving requests, managing schedules, evaluating employees, and generating reports. All data is processed within the system and stored in a centralized database to ensure consistency, accuracy, and easy access.

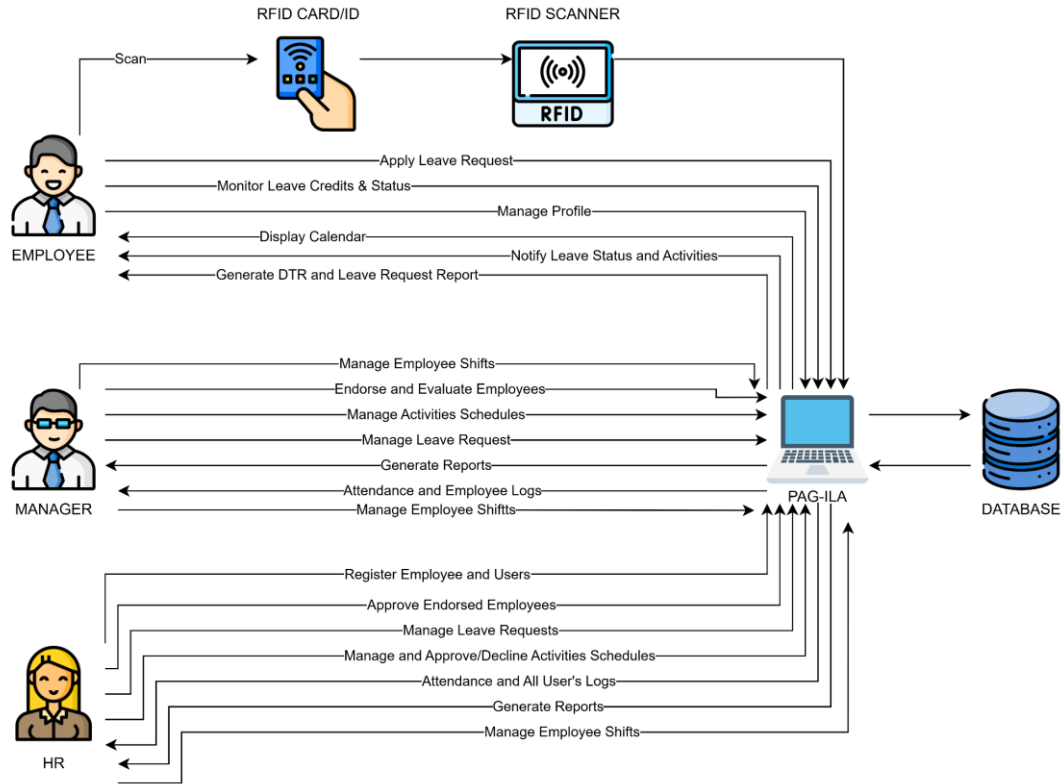

Figure 19. System Architecture

I. System Implementation

The deployment of PAG-ILA: A Human Resource Management System with Attendance Monitoring Using RFID for Penong's Barbecue Seafoods & Grill was carried out in phases to minimize disruptions and ensure a smooth transition for the organization. During the six-week deployment period, the project team regularly communicated with management staff, HR personnel, and employees to keep everyone informed about the system's progress and any potential issues that might arise. Regular feedback was also gathered to address concerns quickly, monitor the system's performance, and ensure the successful implementation of PAG-ILA.

Testing Plan

The phases that the project installation went through are shown in Table 43. The following are the phases of the installation:

Table 42. Test Plan Overview

Component	Details
Scope of Testing	The testing covers the PAG-ILA system core modules and critical workflows, including RFID Attendance, Leave Management, Activity Scheduling, Performance Evaluation, and Report Generation.
Objectives	(1) Verify that each module meets functional requirements and organizational workflow expectations; (2) Identify and resolve defects before deployment; (3) Validate data accuracy, consistency, and integrity across all user roles; (4) Confirm system performance under normal and peak usage; (5) Ensure security through role-based access control and proper handling of employee data.
Testing Types	• Unit Testing, where each module is tested individually; • Integration Testing, where connected modules are tested together; • Hardware Testing, where system features are checked based on requirements; • User Acceptance Testing (UAT), where the actual users test the system to identify issues, errors, or defects.

Conduct Testing Activities

Actual execution of all planned tests are presented below. In this step, the project team performs different types of testing to verify the quality and functionality of the system. This includes:

Alpha Testing was conducted by the project team together with their adviser to evaluate the PAG-ILA system before involving actual users. This phase ensured

that key functions, such as user management, RFID attendance, leave processing, scheduling, and report generation, operate correctly in a controlled environment.

Table 43. Unit Testing

Test Case ID	Module	Test Description	Preconditions	Test Steps	Expected Result	Actual Result
UT – 001	User Login	Verify login validation	User account exists	Enter username and password, click login	System validates credential	Passed
UT – 002	User Registration	Validate required fields	HR module active	Input personal information , ID, role, and branch	System accepts valid inputs	Passed
UT – 003	RFID Check – in/out	Validate the RFID scan function	RFID assigned to the user	Scan the RFID card	System records	Passed
UT – 004	Leave Request Form	Validate leave request	Employee logged in	Fill out the leave form and submit	Leave request saved	Passed
UT – 005	Report Generator	Validate report output	Data available in the database	Generate DTR/PA report	The system generates a correct report	Passed

Integration Testing was conducted to verify that the different modules of the PAG-ILA system work together properly. This includes the interaction between user management, RFID attendance, leave processing, scheduling, notifications, and report generation. The purpose of this testing is to ensure smooth data flow and communication between modules.

Based on the results, all integrated components functioned correctly, with no major issues encountered during testing. This indicates that the system modules are well-coordinated and have successfully passed the Integration Testing phase.

Table 44. Integration Testing

Test Case ID	Module	Test Description	Preconditions	Test Steps	Expected Result	Actual Result
IT-001	HR+User Registration	Verify user creation flow	HR logged in	Register a new employee	Employee appears in the system	Passed
IT-002	Management + Evaluation	Verify endorse and evaluation flow	Employee endorsed	Evaluate employee by Manager	Evaluation saved and reflected	Passed
IT – 003	Leave + Notification	Verify leave approval notification	Leave request submitted	HR approves/d eclines the request	Employee receives notif	Passed
IT – 004	Attendance + RFID + Database	Verify attendance logs	RFID active	Scan the RFID card	Data saved in attendance logs	Passed
IT – 005	Scheduling + Notification	Verify schedule updates	Schedule created	HR updates activity schedule	Employees are notified	Passed

Functional Testing was conducted to ensure that all features of the PAG-ILA system operate according to the specified requirements. This includes user management, RFID attendance, leave processing, scheduling, notifications, and report generation. The purpose is to verify that each function performs correctly based on user actions and system inputs.

Based on the results, all system functions worked as expected, and users were able to complete their tasks without errors. This indicates that the system successfully passed the Functional Testing phase.

Table 45. Functional Testing

Test Case ID	User Role	Test Description	Preconditions	Test Steps	Expected Result	Actual Result
FT-001	HR Personnel	Manage user accounts	HR logged in	Add, update, and delete users	System updates the user list	Passed
FT-002	HR Personnel	Approve leave requests	Leave request exists	Approve/decline request	Status updated and notified	Passed
FT-003	Management Staff	Endorse employee	Employee available	Endorse for evaluation	Employee forwarded to HR	Passed
FT-004	Employee	Apply for leave request	Employee logged in	Submit leave form	Request stored in the system	Passed
FT-005	All Users	View activity schedules	Schedule exists	Open calendar view	Correct schedule displayed	Passed

Hardware Testing was conducted to ensure that all physical components of the PAG-ILA system, particularly the RFID reader and related devices, function properly with the system. This testing verifies that the hardware accurately captures and transmits data, such as employee attendance, without errors.

Based on the results, the hardware components operated correctly and were able to communicate with the system without issues. This indicates that the system successfully passed the Hardware Testing phase.

Table 46. Hardware Testing

Test Case ID	Hardware Component	Test Description	Preconditions	Test Steps	Expected Result	Actual Result
HT-001	RFID Reader	Verify card scanning accuracy	RFID device connected	Scan a valid RFID card	System recognizes user	Passed
HT-002	RFID Card	Test invalid card handling	An unknown RFID card was used	Scan the unregistered card	System denies access	Passed
HT-003	PLDT WiFi	Test system internet	System online	Disconnect/reconnect network	System handles reconnect properly	Passed
HT-004	Printer	Verify report printing	Report generated	Print DTR/PA report	Printed output is correct	Passed
HT-005	Device Synch	Verify real-time data sync	RFID + system active	Perform check-in/out	Data updates instantly	Passed

User Acceptance Testing (UAT)

User Acceptance Testing (UAT) was conducted to evaluate whether the PAG-ILA system meets the needs of HR personnel, management staff, and employees. This testing ensured that key functions—such as user management, RFID attendance, leave processing, scheduling, and report generation—work properly in real-world use. The evaluation used questionnaires based on ISO/IEC 25010 standards, focusing on functionality, usability, and reliability. Results reveal that users were able to complete tasks without major issues, indicating that the system successfully passed the UAT phase.

The corresponding questionnaires used for each user group are provided in the Appendices, on page 214, ensuring transparency and proper documentation

of the evaluation instruments. Furthermore, the evaluation was guided by the ISO/IEC 25010 software quality standard, which served as the basis for assessing the system's functional suitability, usability, reliability, performance efficiency, and other relevant quality characteristics. This approach ensures that the system is evaluated in accordance with internationally recognized software quality benchmarks.

Finalize Test Results

All findings from the testing activities are reviewed, documented, and analyzed. This includes:

- **Performance and Refinement Testing** – checking how well the PAG-ILA system performs during actual use. In this stage, the system is tested to measure its speed, response time, stability, and ability to handle multiple users or repeated operations.
- **Final Testing Cycle** – undergoes one final and complete round of testing after all revisions and refinements have been applied.

Get Approval for Implementation

The completed system, together with the final testing results, refinements, and documentation, is presented to the authorized personnel, such as the project adviser, management staff, HR personnel, or the organization's decision-makers, for review and confirmation.

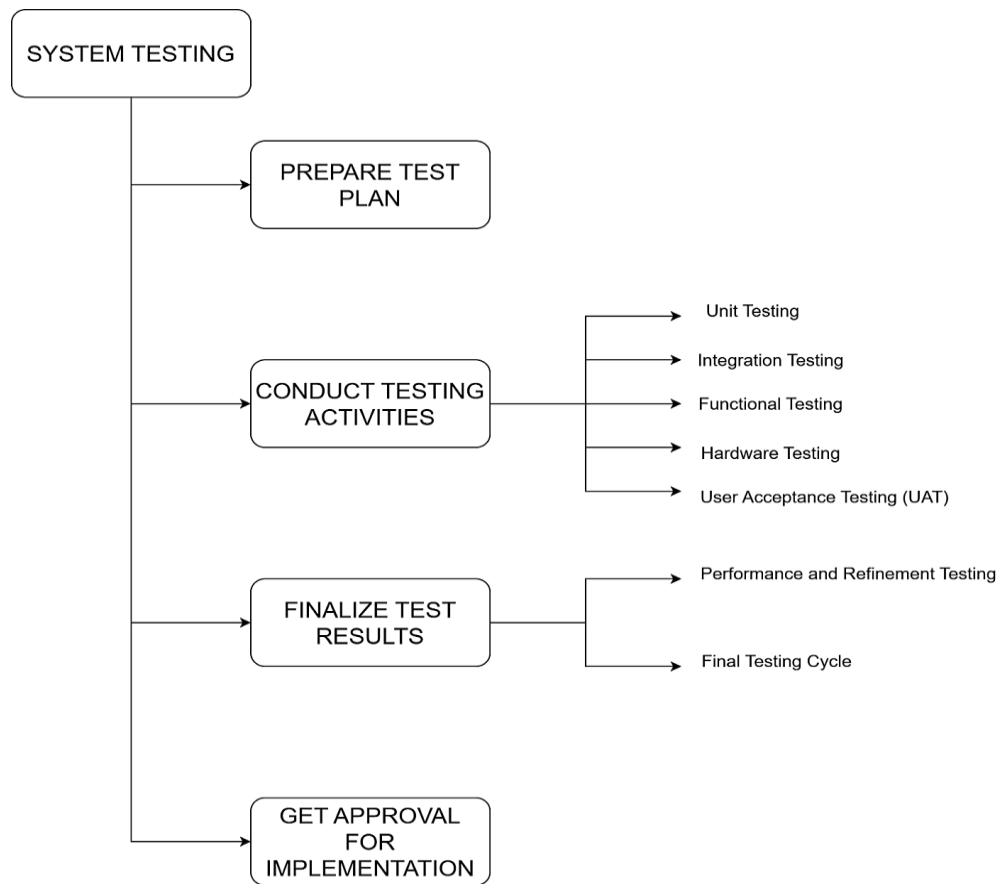

Figure 20. PAG-ILA Testing Plan

Errors Found/Lack of Functionalities

The project team recorded all identified errors and the lack of functionalities of the PAG-ILA. The following weeks contain errors found/lack of functionalities of the system.

Week 1 Error Found/Lack of Functionalities

During the deployment phase, after one week of using, monitoring, and system exploration, the organization identified several additional issues and enhancement requests to further improve the system's functionality and usability.

One of the requested improvements was the addition of employee shift options during employee registration and profile editing. This allows administrators to assign the appropriate shift schedule to each employee upon registration and easily update it whenever necessary. To align with the organization's actual

operations, the first shift and second shift schedules were also separated, ensuring that working hours are clearly defined and scheduling conflicts are avoided.

Another important enhancement involved the Rest Day configuration, wherein Saturday and Sunday were added as selectable rest day options. This ensures that employee schedules accurately reflect actual non-working days based on the organization's policies.

The organization also requested improvements in the Daily Time Record (DTR) monitoring interface. Specifically, undertime and late attendance entries were highlighted using color indicators to make attendance issues easier to identify: yellow for undertime and red for late records. Lastly, the organization requested improvements to the employee activity attendance form arrangement to make it more organized and user-friendly.

The screenshot shows the 'Add New New Employee' form in the PAG-ILA system. The form is divided into two main sections: 'Add New New Employee' on the left and 'New Employee Information' on the right. The left section includes a 'File Upload' button, an 'Employee Role' dropdown set to 'New Hire', a 'Click and Scan RFID' button, a 'Scan RFID' button, and a 'Rest Day' dropdown set to 'Weekdays only'. The right section contains various input fields for employee information, including 'Branch', 'First Name', 'Middle Name (Optional)', 'Last Name', 'Sex', 'Birth Date', 'Date Hired', 'Resident Address', 'Town/City', 'Mobile Number', and 'Mobile Number'. The 'Security' section includes 'Email Address' and 'Email' fields.

Figure 20. Employee Profile – Before

The screenshot shows the 'Add New Employee' form in the PAG-ILA system after enhancements. The form is divided into two main sections: 'Add New Employee' on the left and 'Employee Information' on the right. The left section includes a 'File Upload' button, an 'Employee Type' dropdown set to 'New Hire', a 'Select Type' dropdown, a 'New Hire' button, a 'First Session' dropdown set to 'Lunch', a 'Second Session' dropdown set to 'Lunch', a 'Lunch Operation' dropdown set to 'First Shift', a 'First Shift' dropdown, a 'Dinner Operation' dropdown, a 'First Shift' dropdown, a 'Click and Scan RFID' button, a 'Scan RFID' button, and a 'Rest Day' dropdown set to 'Weekdays only'. The right section contains various input fields for employee information, including 'Branch', 'First Name', 'Middle Name (Optional)', 'Last Name', 'Sex', 'Birth Date', 'Date Hired', 'Resident Address', 'Town/City', 'Mobile Number', and 'Mobile Number'. The 'Security' section includes 'Email Address' and 'Email' fields. A red box highlights the 'Employee Type' dropdown, 'New Hire' button, 'First Session' dropdown, 'Second Session' dropdown, 'Lunch Operation' dropdown, 'First Shift' dropdown, 'Dinner Operation' dropdown, 'First Shift' dropdown, 'Click and Scan RFID' button, 'Scan RFID' button, and 'Rest Day' dropdown.

Week 2 Error Found/Lack of Functionalities

During the second week of the deployment phase, the system underwent continuous revisions to address the issues and enhancement requests identified during the first week of testing and system use. The focus of this phase was to refine system functionalities, improve usability, and ensure alignment with the organization's operational requirements.

Additionally, the system's DTR logo was replaced with the official Penong's logo to align with the organization's branding. Overall, the system was continuously

refined throughout Week 2 to ensure that all requested enhancements from the initial deployment were successfully implemented and met the organization's expectations.

operations. These changes affected how the system should function, so several parts of the system needed to be updated.

An issue was also discovered in the schedule setup, where the existing schedule in the system no longer matched the updated time schedules implemented by the organization. Since the organization revised its official working hours, the system's schedule configuration also had to be updated to reflect these changes. This required the revision of shift time settings to ensure that attendance logs, late computation, and undertime records remain accurate based on the new schedule.

Week 4 Error Found/Lack of Functionalities

This week was the time when the system became ready to use because all the needed revisions had already been completed. Since the changes and improvements were successfully done, the system was prepared for actual operation. During this week, all users were registered in the system so they could start using it. This marked the beginning of the system's official operation, where users were able to access its features and perform their tasks. Overall, this week was an important part of the project because it showed the transition from revision and testing to actual use of the system.

Figure 31. Employee List – After

Week 5 Error Found/Lack of Functionalities

During the fifth week of the deployment phase, the system showed significant improvement as the attendance features were already functioning properly. The organization was able to use the attendance system smoothly, and the main focus of this week was to improve the computation and arrangement of attendance records.

One of the important updates made during this week was the addition of automatic computation for late and undertime hours. This feature allows the system to calculate the exact number of hours an employee was late or undertime based on their attendance logs. This helps make the Daily Time Record (DTR) more accurate and easier for administrators to monitor.

Another major revision was the separation of the attendance page for every branch. This change makes it easier for administrators and management staff to view and monitor attendance records according to their assigned branch, resulting in better organization and faster access to employee records.

The organization also requested the removal of Sunday as a regular working day in the DTR summary hours. Instead, all computations related to

regular work hours were merged under regular days to simplify the attendance summary and better match the company's work schedule.

In addition, all regular values in the DTR were changed from hours to days, except for overtime, which remains measured in hours. This revision improves the clarity of the attendance report and makes the summary easier to understand, especially when reviewing employee work records and payroll-related information.

Figure 41. Daily Time Record Labels – After

Week 6 Error Found/Lack of Functionalities

During the sixth week of the deployment phase, the system operated smoothly and performed well based on the organization's weekly feedback. Unlike the previous weeks, no new changes, revisions, or issues were reported during this period.

The absence of errors and requested modifications indicates that the system had already become stable and was able to support the organization's daily operations effectively. The attendance, scheduling, leave management, and reporting features continued to function as expected, allowing users to perform their tasks without difficulty.

This week served as an important confirmation that the continuous revisions and improvements made in the earlier weeks were successful. The positive feedback from the organization showed that the system was already aligned with their processes and operational requirements.

This section discusses the evaluation results obtained from the end-users of PAG-ILA: A Human Resource Management System with Attendance Monitoring Using RFID for Penong's Barbecue Seafoods & Grill. The evaluation process involved respondents selected through the use of cluster sampling from the three branches of the organization, namely Sasa, Buhangin, and NHA. For each branch, the respondents consisted of five (5) employees, two (2) managers, and one (1) human resource personnel, resulting in a total of twenty-four (24) respondents. Evaluation questionnaires were distributed to each selected respondent to gather insights regarding the system's effectiveness, performance, and overall impact on the organization's daily operations.

The system was evaluated based on the ISO/IEC 25010 software quality model, which includes the quality characteristics of Functional Suitability, Performance Efficiency, Usability, Reliability, Security, Compatibility, and Maintainability. The questionnaires provided detailed information on how well PAG-ILA performs in managing attendance monitoring through RFID, employee records, and human resource processes. The gathered data were then tabulated, analyzed, and interpreted using the appropriate statistical tools to determine the level of acceptability and effectiveness of the system in meeting the needs of Penong's Barbecue Seafoods & Grill.

Table 47. Scale Interpretation of PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for Penong’s Barbecue Seafoods & Grill.

Numerical Description	Range	Descriptive Equivalent	Description
5	4.50 – 5.00	Very Efficient	The software meets the requirements of the system objectives
4	3.50 – 4.49	Efficient	The software meets more than the average requirements of the system’s objectives.
3	2.50 – 3.49	Moderately Efficient	The software meets the minimum requirements of the system’s objectives
2	1.50 – 2.49	Less Efficient	The software meets fewer than the average requirements of the system’s objectives.
1	0.50 – 1.49	Poor	The software does not meet the minimum requirements of the system’s objectives.

CHAPTER III

RESULT AND DISCUSSION

This chapter presents the results of the end-user evaluation of PAG-ILA: A Human Resource Management System with Attendance Monitoring Using RFID for Penong's Barbecue Seafoods & Grill. The evaluation was completed by the authorized end-users, including the HR Personnel, Management Staff, and Employees, through the use of questionnaires to assess the system's effectiveness and gather detailed data regarding its overall performance and impact on daily operations. The system was evaluated using the ISO/IEC 25010 quality model, which covers the key quality characteristics of Functional Suitability, Performance Efficiency, Usability, Reliability, Security, Compatibility, and Maintainability.

Results

The evaluation was conducted to ensure a clear and concise understanding of the project's success, areas of improvement, and the overall impact of the execution strategies employed. The summarized results are shown below based on the objectives of the project.

1. Allow HR Personnel to register all users and manage the following:

- **Personal Information**

This functionality in the PAG-ILA system manages and securely records all personal information of employees, including essential identification details and relevant personal data. This allows the system to maintain accurate, organized, and updated employee profiles for efficient processing, verification, and monitoring.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates

that the system performs very efficiently in handling, securing, and managing personal information within the PAG-ILA system.

- **Unique ID Numbers**

This functionality in the PAG-ILA system generates and manages unique ID numbers for each user, ensuring that every employee is properly identified within the system. This supports accurate record-keeping, avoids duplication of accounts, and improves the efficiency of tracking and managing user data.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in generating, assigning, and managing unique ID numbers within the PAG-ILA system.

- **Role-Based Access**

This functionality in the PAG-ILA system implements role-based access control, allowing users to access system features based on their assigned roles and responsibilities. This ensures that only authorized personnel can view or perform specific actions within the system, enhancing security, data protection, and proper system management.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in implementing role-based access control and managing user permissions within the PAG-ILA system.

- **Branch**

This functionality in the PAG-ILA system manages and organizes data according to different branches, allowing each branch to have its own set of records, users, and activities within the system. This supports proper segregation of information, improves data organization, and ensures accurate monitoring of operations per branch.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and organizing branch-based data within the PAG-ILA system.

- **Shifts**

This functionality in the PAG-ILA system manages and records employee shifts, allowing the system to properly assign, track, and organize work schedules. This ensures that employees are assigned to the correct shifts, improves workforce scheduling, and supports efficient monitoring of attendance and work coverage.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and organizing employee shift schedules within the PAG-ILA system.

- **Employment Role**

This functionality in the PAG-ILA system manages and assigns employment roles to each employee, ensuring that their positions, responsibilities, and access rights are properly defined within the

system. This helps in organizing workforce structure, improving task delegation, and maintaining clear job role classification.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and assigning employment roles within the PAG-ILA system.

- **Positions**

This functionality in the PAG-ILA system manages and records employee positions within the organization, ensuring that each user is properly assigned to their designated job title. This supports clear organizational structure, accurate role identification, and effective workforce management.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and organizing employee positions within the PAG-ILA system.

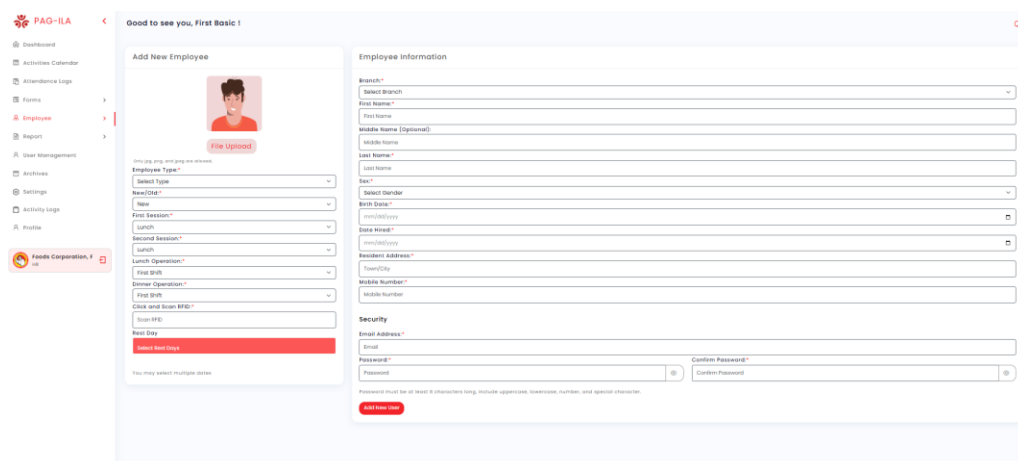

Figure 42. Employee Registration Page

Figure 43. User Registration Page

2. HR Personnel are allowed to:

- **Manage all user lists, including update, view, and delete.**

This functionality in the PAG-ILA system allows administrators to manage the all-user list by enabling them to update, view, and delete user accounts. This ensures that user records are kept accurate, up-to-date, and properly maintained, supporting efficient system administration and data integrity.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing user accounts, including updating, viewing, and deleting records within the PAG-ILA system.

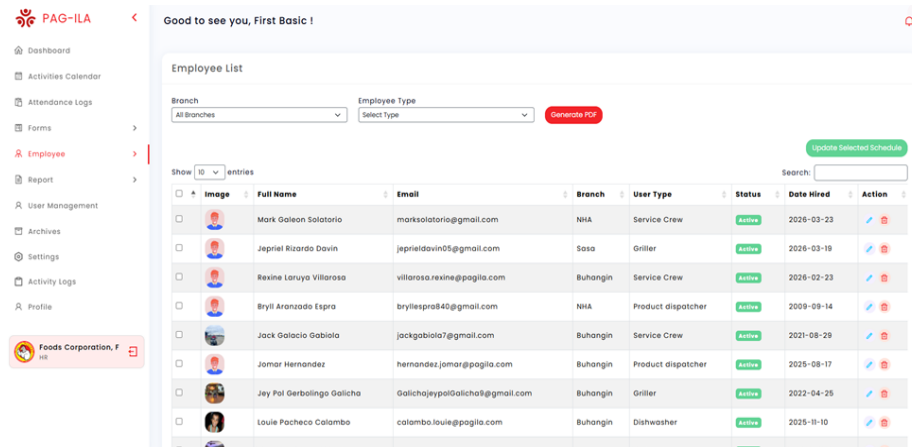

Figure 44. Employee List Page

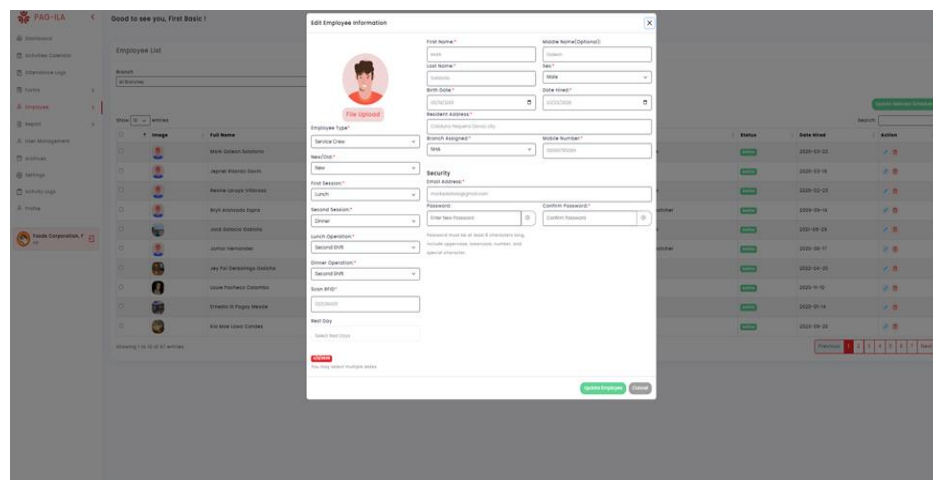

Figure 45. Employee List Update Page

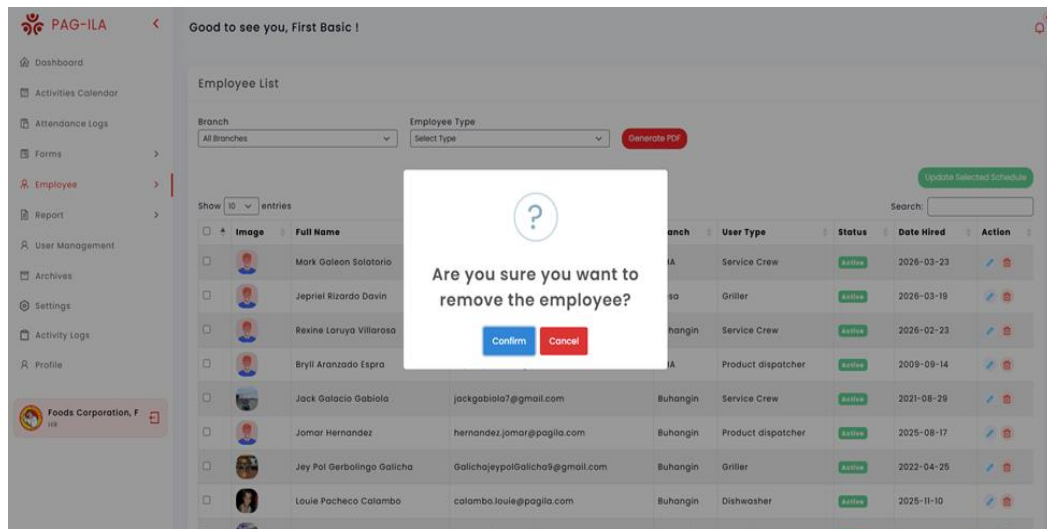

Figure 46. Employee List Delete Page

- **Approved endorsed employees by the Management Staff for evaluation**

This functionality in the PAG-ILA system allows the Human Resources personnel to approve employees who have been endorsed by the management staff for evaluation. This ensures that endorsed employees are properly reviewed and forwarded to the next stage of the evaluation process, supporting an organized and efficient employee assessment workflow.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in approving endorsed employees for evaluation within the PAG-ILA system.

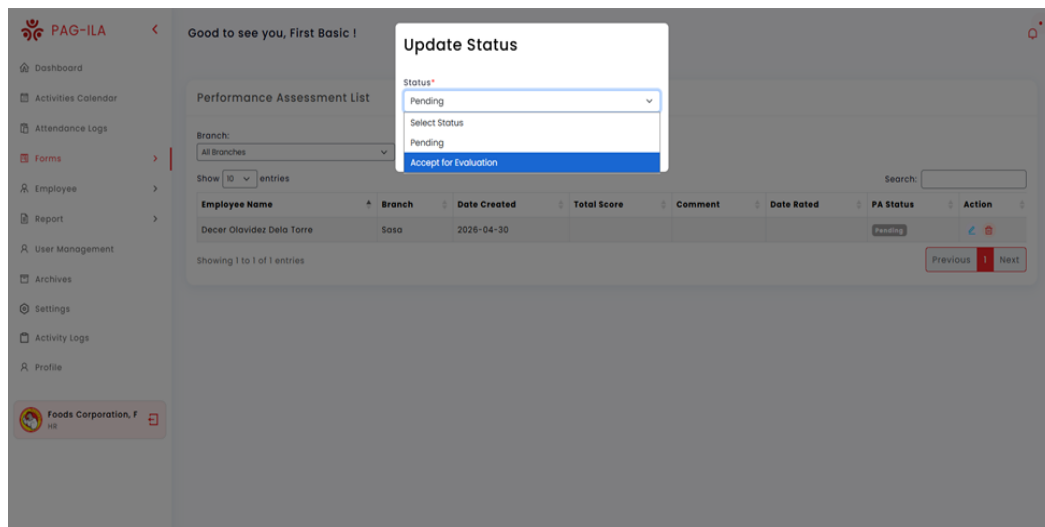

Figure 47. Approve Evaluation Page

- **Approve/Decline employee leave requests**

This functionality in the PAG-ILA system allows the HR personnel to approve or decline employee leave requests based on company policies and employee eligibility. This ensures that leave applications are properly reviewed, decisions are accurately recorded, and employees are informed of their request status, supporting an efficient and organized leave management process.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in processing and managing employee leave requests within the PAG-ILA system.

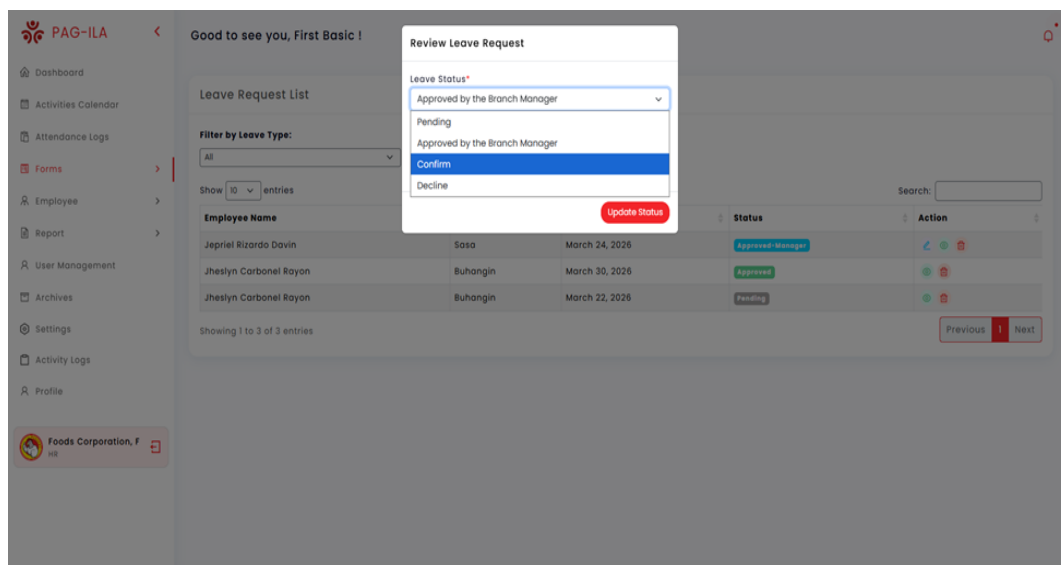

Figure 48. Approve/Decline Leave Request Page

- **Manage and approve/decline activities' schedule**

This functionality in the PAG-ILA system allows the HR personnel to manage, approve, or decline activity schedules submitted within the system. This ensures that all scheduled activities are properly reviewed, validated, and aligned with organizational requirements, promoting organized workflow and effective coordination of activities.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and processing activity schedules, including approval and declination of requests within the PAG-ILA system.

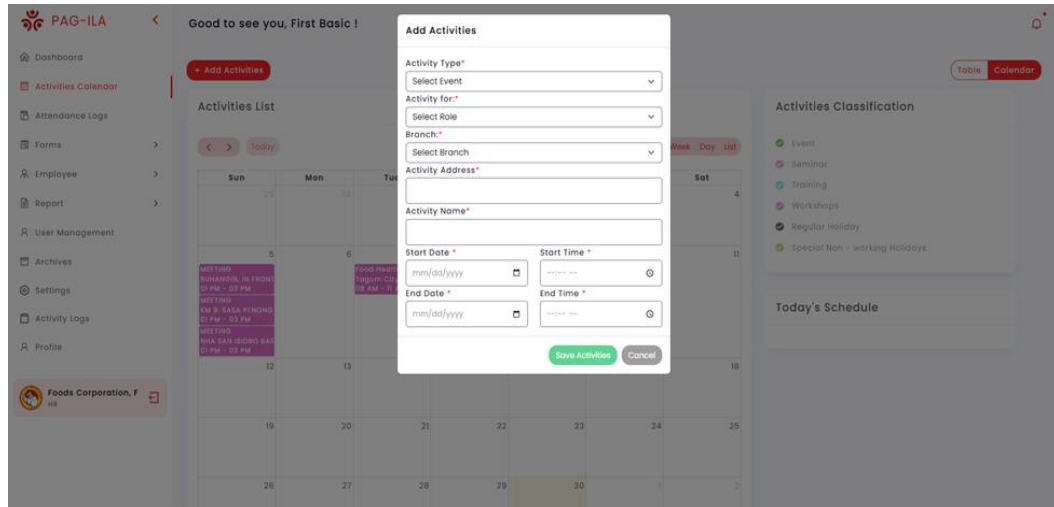

Figure 49. Manage Activities Schedule Page

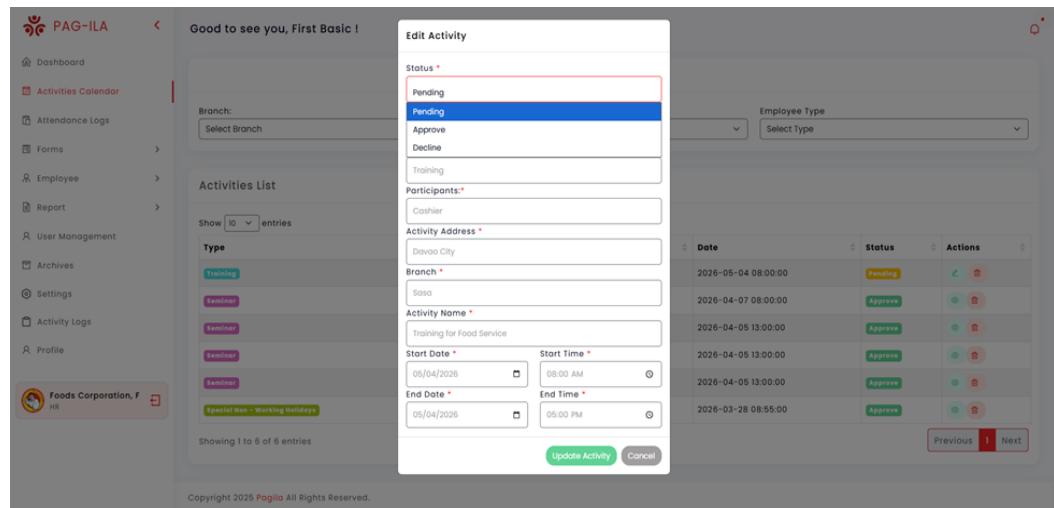

Figure 50. Approve/Decline Activities Schedule Page

- **Notify employee leave requests status**

This functionality in the PAG-ILA system notifies employees regarding the status of their leave requests, whether approved or declined. This ensures that employees are promptly informed of decisions, improving communication, transparency, and awareness of their leave application status within the organization.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent

scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in notifying employees about the status of their leave requests within the PAG-ILA system.

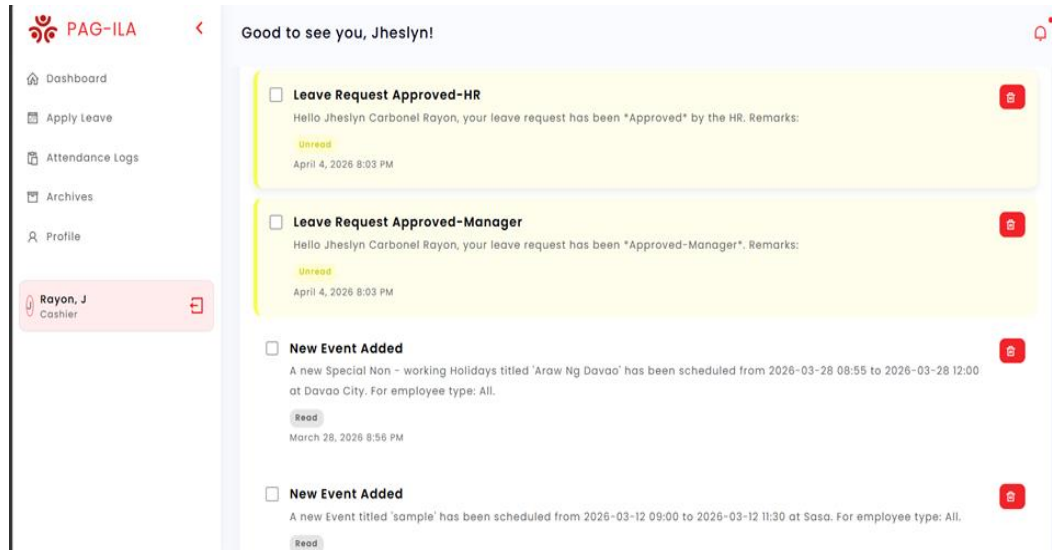

Figure 51. Employee Leave Notification Page

- **Notify all user activities schedules**

This functionality in the PAG-ILA system notifies all users regarding their assigned activity schedules. This ensures that employees are properly informed of their upcoming tasks and schedules, promoting awareness, preparedness, and efficient coordination of activities within the organization.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in notifying all users about their activity schedules within the PAG-ILA system.

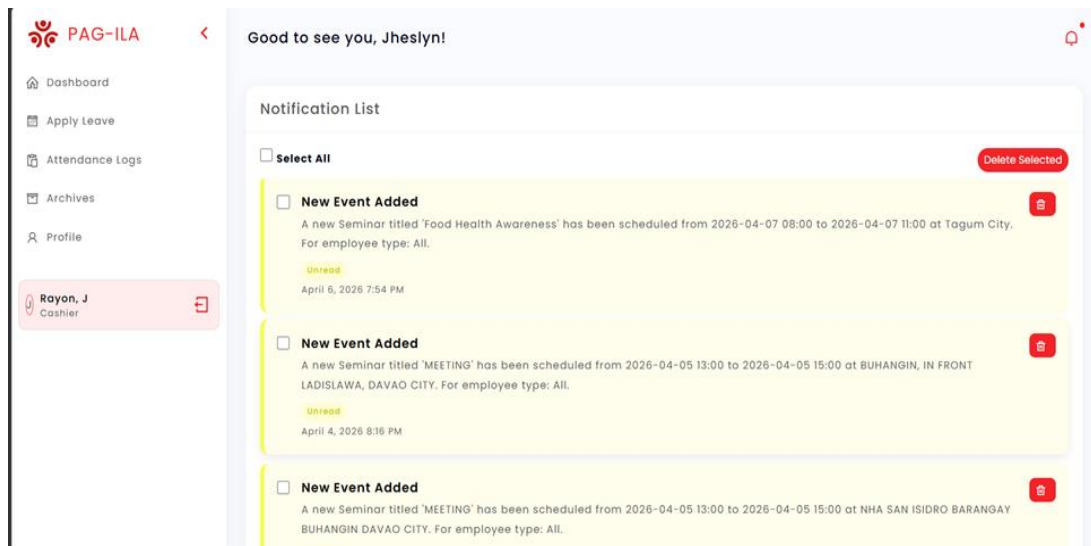

Figure 52. Manager Activities Schedule Notification Page

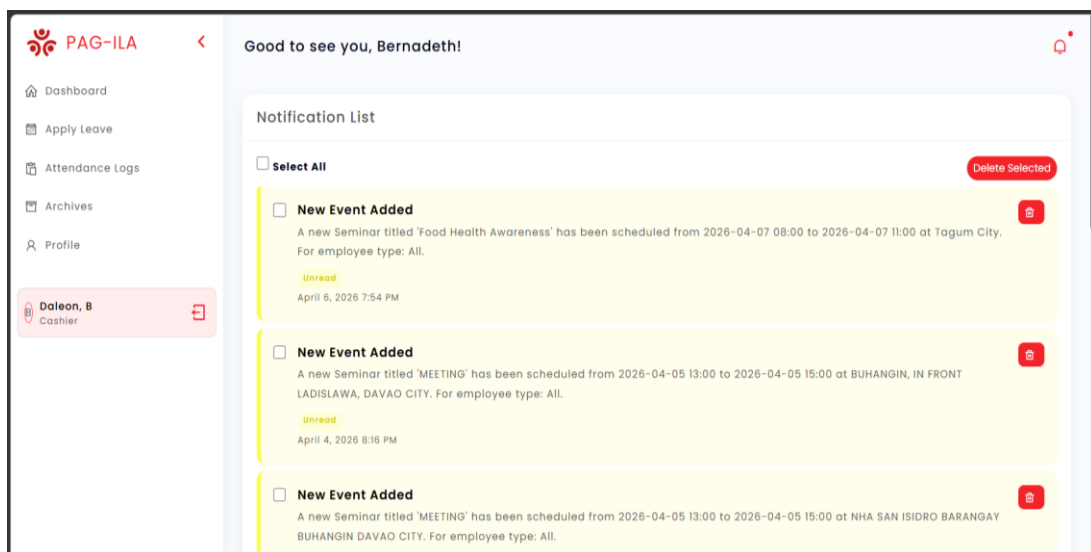

Figure 53. Employee Activities Schedule Notification Page

- **View all users' activity logs**

This functionality in the PAG-ILA system allows authorized personnel to view all users' activity logs, providing a detailed record of system actions and user interactions. This supports transparency, accountability, and effective monitoring of system usage within the organization.

The system achieved a mean average of five (5) in this objective based on the HR evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in tracking and displaying all users' activity logs within the PAG-ILA system.

Figure 54. User Activity Logs Page

3. Management Staff are able to:

- **Endorse and evaluate the employees' performance**

This functionality in the PAG-ILA system allows the management staff to endorse employees and evaluate their performance based on set criteria. This ensures that employee performance is properly assessed, documented, and forwarded for further review, supporting an organized and systematic evaluation process within the organization.

The system achieved a mean average of five (5) in this objective based on the manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in endorsing

employees and evaluating their performance within the PAG-ILA system.

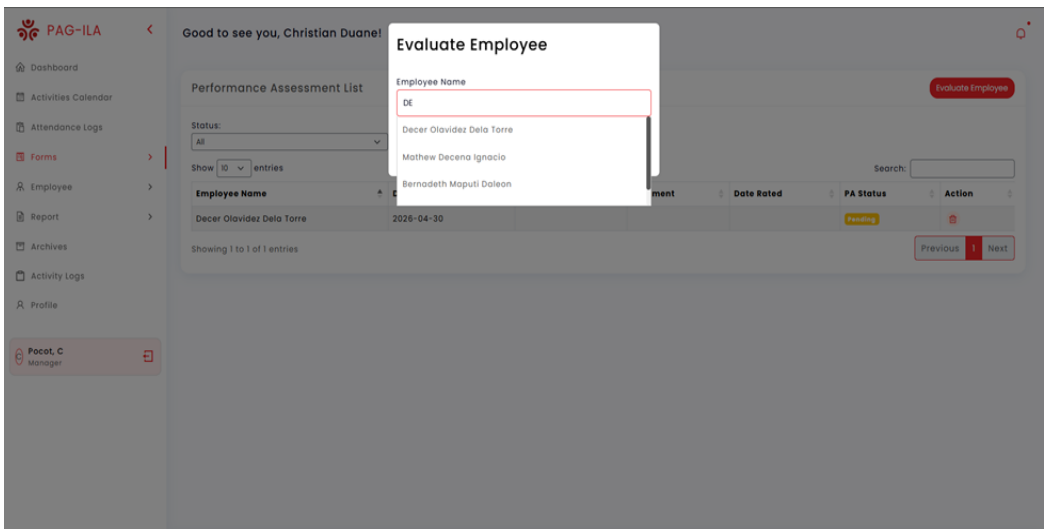

Figure 55. Endorse Employee Page

The screenshot displays the 'Performance Assessment Form' in the PAG-ILA system. It includes a sidebar with navigation links. The form has a header 'Good to see you, Christian Duane!' and a 'Performance Assessment Form' title. Below the title is a note: 'Instructions: Please evaluate the employee based on each listed criterion by selecting one rating from 1 to 5. Ratings are as follows: (1) Exceptional, (4) Exceeds Requirements, (3) Meets Requirements, (2) Gets By, (5) Needs Work.' The form contains three main sections: 'Productivity', 'Communication', and 'Leadership'. Each section has a table with criteria and rating options. The 'Productivity' section has 6 criteria, 'Communication' has 4, and 'Leadership' has 1. The 'Evaluate Employee' button is visible in the top right corner.

Figure 56. Evaluate Employee Page

- **Manage activities' schedules**

This functionality in the PAG-ILA system allows the management staff to manage activity schedules by creating, updating, and organizing scheduled activities. This ensures that all activities are

properly planned, coordinated, and monitored, supporting smooth workflow and efficient time management within the organization.

The system achieved a mean average of five (5) in this objective based on the manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and organizing activity schedules within the PAG-ILA system.

The screenshot shows the 'Add Activities' modal form in the PAG-ILA system. The form is overlaid on a calendar view. The modal contains the following fields: 'Activity Type*' (a dropdown menu), 'Activity for:' (a dropdown menu), 'Activity Address*' (a text input), 'Activity Name*' (a text input), 'Start Date *' (a date picker), 'Start Time *' (a time picker), 'End Date *' (a date picker), and 'End Time *' (a time picker). At the bottom of the modal are 'Save Activity' and 'Cancel' buttons. The background shows a sidebar with navigation options like Dashboard, Activities Calendar, Attendance Logs, Forms, Employee, Report, Archives, Activity Logs, and Profile. The main area displays a calendar with a 'MEETING KM 9, SABA PER' event on the 5th.

Figure 57. Add Activities Schedule Page

The screenshot shows the 'Activity Details' modal form in the PAG-ILA system. The modal is overlaid on a calendar view. The modal contains the following fields: 'Activity Name' (text input with 'Food Health Awareness'), 'Activity Type' (text input with 'Seminar'), 'Branch' (text input with 'All'), 'Status' (a dropdown menu with 'Approve' selected), 'Address' (text input with 'Tagum City'), 'Assigned Employee' (text input with 'All'), 'Start Date & Time' (text input with '2026-04-07 08:00'), 'End Date & Time' (text input with '2026-04-07 11:00'), and 'Remarks' (text input with '-'). At the bottom of the modal are 'Previous' and 'Next' buttons. The background shows a sidebar with navigation options like Dashboard, Activities Calendar, Attendance Logs, Forms, Employee, Report, Archives, Activity Logs, and Profile. The main area displays a calendar with a 'MEETING KM 9, SABA PER' event on the 5th.

Figure 58. View Activities Schedule Page

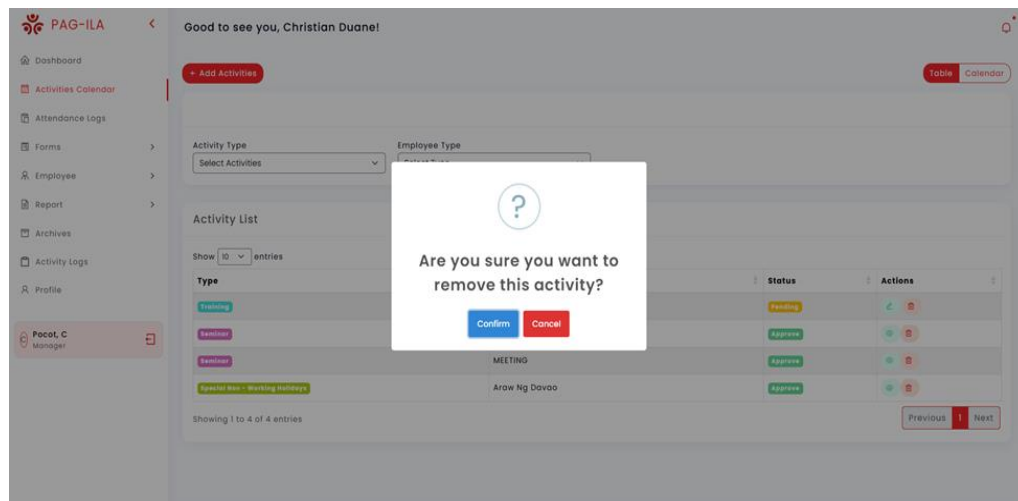

Figure 59. Delete Activities Schedule Page

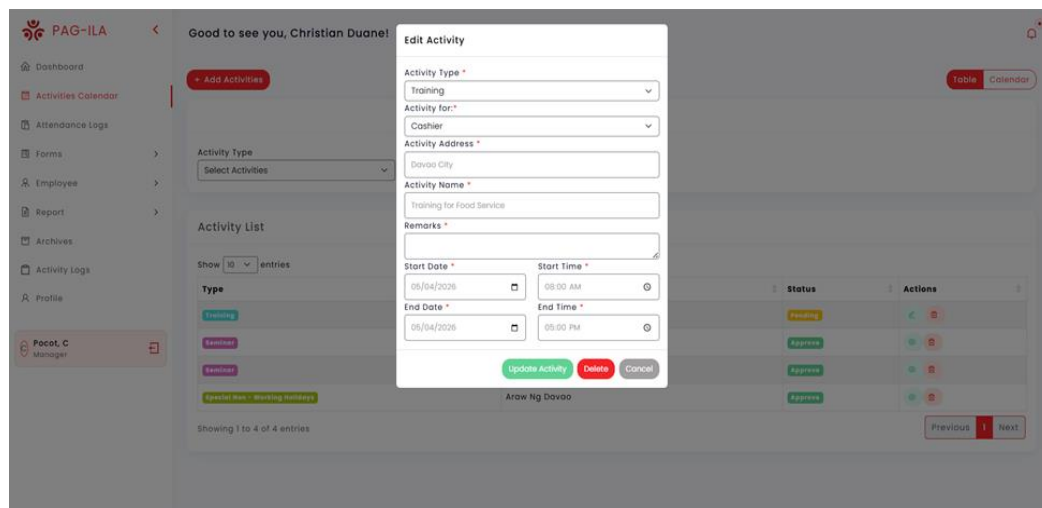

Figure 60. Edit Activities Schedule Page

- **Record employee's completed activities**

This functionality in the PAG-ILA system allows the management staff to record employees' completed activities, ensuring that all accomplished tasks are properly documented and stored in the system. This supports accurate tracking of employee performance, accountability, and activity completion monitoring within the organization.

The system achieved a mean average of five (5) in this objective based on the manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in recording employees' completed activities within the PAG-ILA system.

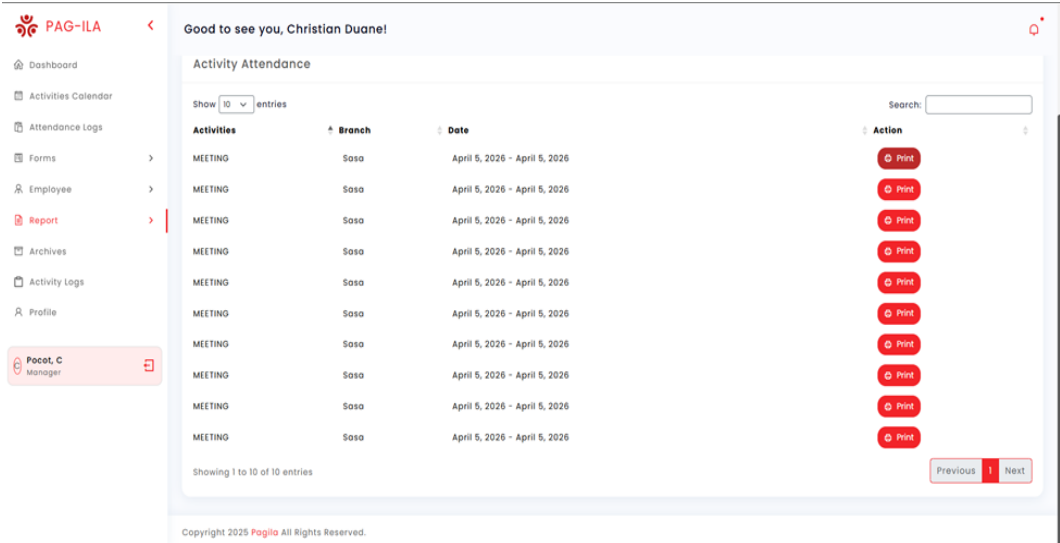

Figure 61. Completed Activities Page

- **Approve/Decline and notify employee leave requests**

This functionality in the PAG-ILA system allows the management staff to approve or decline employee leave requests and automatically notify employees regarding the status of their applications. This ensures that leave requests are properly reviewed, decisions are promptly communicated, and records are accurately maintained for efficient leave management within the organization.

The system achieved a mean average of five (5) in this objective based on the manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in handling, processing, and notifying employees of their leave request status within the PAG-ILA system.

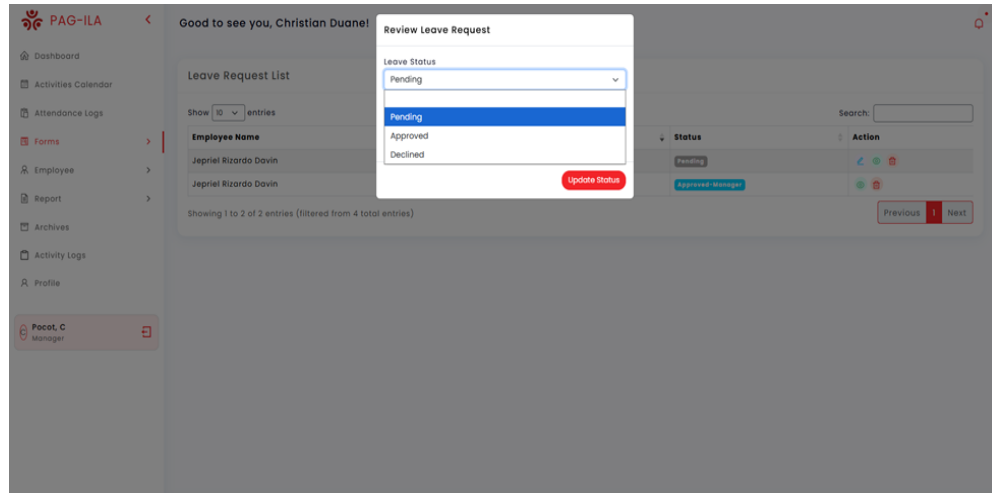

Figure 62. Approve/Decline Leave Request Page

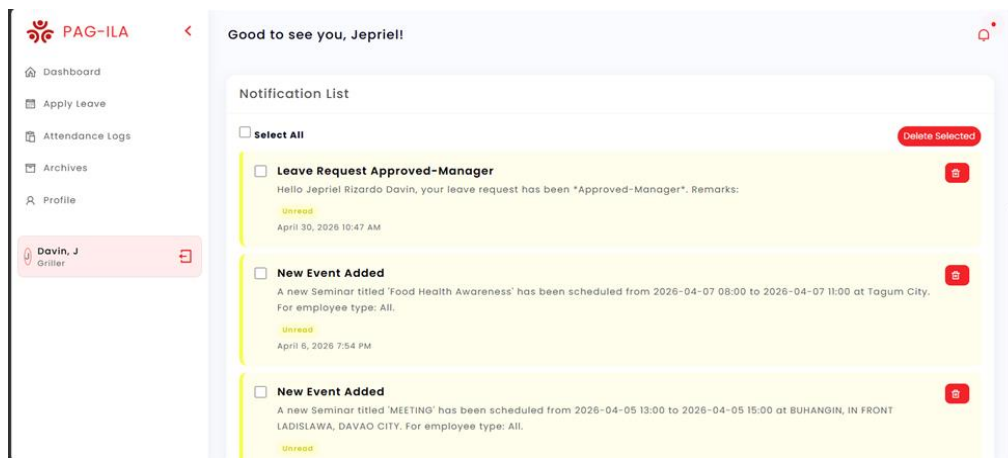

Figure 63. Notifications Leave Request Page

- **Manage employee's shifts and employment role**

This functionality in the PAG-ILA system allows the management staff to manage employee shifts and employment roles by assigning, updating, and organizing work schedules and job responsibilities. This ensures that employees are properly scheduled and assigned to their correct roles, supporting efficient workforce management and smooth organizational operations.

The system achieved a mean average of five (5) in this objective based on the manager evaluation. Based on the descriptive

equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing employee shifts and employment roles within the PAG-ILA system.

- **View employee’s logs**

This functionality in the PAG-ILA system allows the management staff to view employees’ activity logs, providing detailed records of system usage and employee actions. This supports transparency, accountability, and effective monitoring of employee activities within the organization.

The system achieved a mean average of five (5) in this objective based on the manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in viewing and monitoring employee logs within the PAG-ILA system.

Good to see you, Christian Duane!

4. Enable employees to:

- **Check in and out using RFID**

This functionality in the PAG-ILA system allows employees to check in and check out using RFID technology, ensuring accurate and automated attendance recording. This supports efficient time tracking, reduces manual errors, and improves attendance monitoring within the organization.

The system achieved a mean average of 9.3 in this objective based on the employee evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in handling RFID-based check-in and check-out processes within the PAG-ILA system.

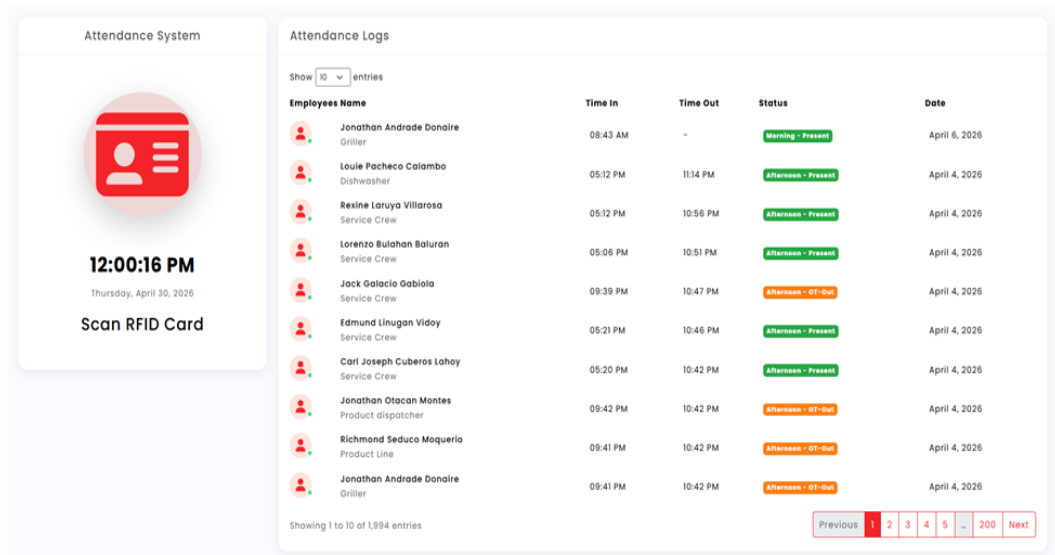

Figure 66. Check IN/OUT Attendance Page

- **Apply leave request**

This functionality in the PAG-ILA system allows employees to apply for leave requests by submitting the required details through the system. This ensures that leave applications are properly recorded, organized, and forwarded for approval, supporting an efficient and structured leave management process.

The system achieved a mean average of 4.9 in this objective based on the employee evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in processing and managing employee leave applications within the PAG-ILA system.

Figure 67. Apply Leave Request Page

- **Monitor leave credits and status**

This functionality in the PAG-ILA system allows employees to monitor their leave credits and view the status of their leave requests. This ensures that employees are properly informed of their available leave balances and the approval status of their applications, supporting transparency and better leave management.

The system achieved a mean average of five (5) in this objective based on the employee evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in monitoring leave credits and leave request status within the PAG-ILA system.

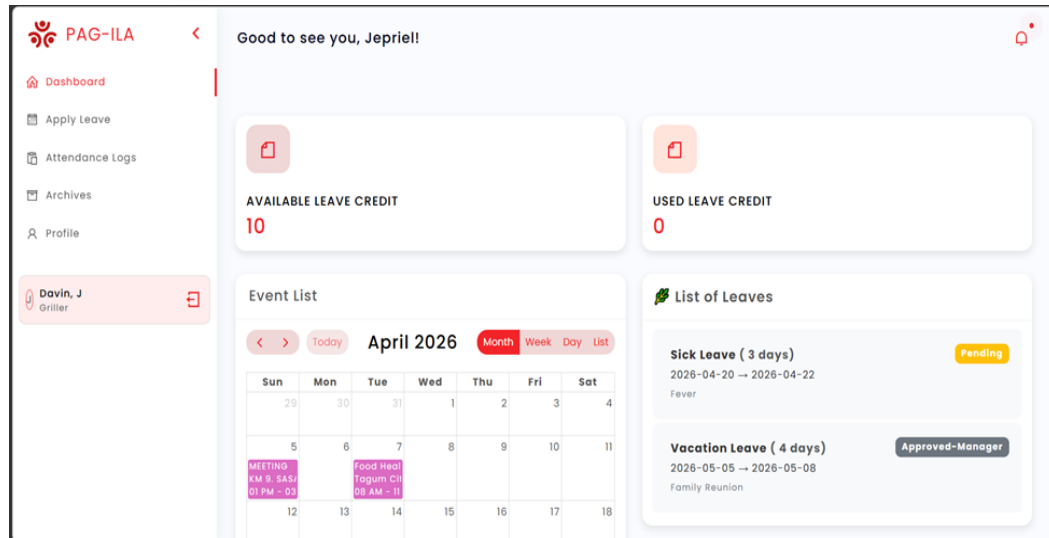

Figure 68. Monitor Leave Credits Page

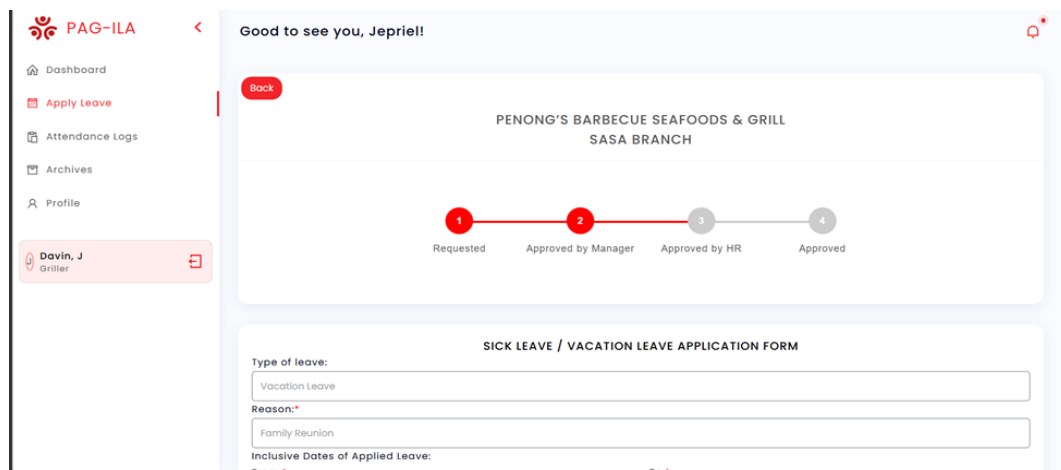

Figure 69. Monitor Leave Status Page

- **Manage personal information**

This functionality in the PAG-ILA system allows employees to manage their personal information by updating and maintaining their profile details. This ensures that employee records remain accurate, updated, and properly organized for efficient system use and verification purposes.

The system achieved a mean average of five (5) in this objective based on the employee evaluation. Based on the descriptive

equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing personal information within the PAG-ILA system.

The screenshot displays the 'Manage Personal Information' page in the PAG-ILA system. On the left, a sidebar menu includes 'Dashboard', 'Apply Leave', 'Attendance Logs', 'Archives', and 'Profile'. The main content area is titled 'Good to see you, Jepriel!' and features a 'Profile' section with a user avatar and a 'File Upload' button. Below the profile is a section for 'Employee Information' with fields for 'First Name' (Jepriel), 'Last Name' (Davin), 'Middle Name (Optional)' (Rizardo), 'Mobile Number' (09810399577), and 'Resident Address' (Cabayugan I, Sasa, Davao City). A 'Security' section contains fields for 'Email Address' (jeprieldavin05@gmail.com), 'Password', and 'Confirm Password'. A red 'Update' button is located at the bottom of the form.

Figure 70. Manage Personal Information Page

- **Attend and view the display calendar of activities' schedules**

This functionality in the PAG-ILA system allows employees to attend assigned activities and view the display calendar of activity schedules. This ensures that employees are properly informed of their scheduled tasks, promoting awareness, preparedness, and organized participation in all activities within the organization.

The system achieved a mean average of five (5) in this objective based on the employee evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing attendance and providing access to the activity schedule calendar within the PAG-ILA system.

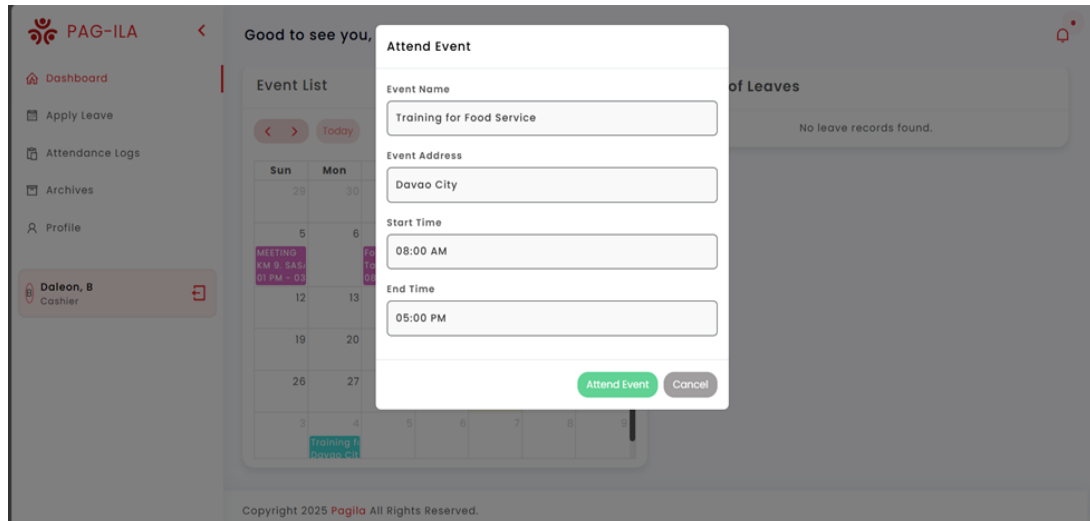

Figure 71. Attend and View Activity Page

5. HR Personnel and Management Staff can track employee’s attendance logs, and Employees can only view their own attendance logs.

This functionality in the PAG-ILA system allows HR personnel and management staff to track and monitor employees’ attendance logs, while employees are only permitted to view their own attendance records. This ensures proper access control, data privacy, and accurate monitoring of attendance information within the organization.

The system achieved a mean average of 4.1 in this objective based on the HR, manager, and employee evaluations. Based on the descriptive equivalent scale, this rating falls under Efficient (3.50–4.49). This indicates that the system performs efficiently in managing attendance tracking and enforcing appropriate access levels within the PAG-ILA system.

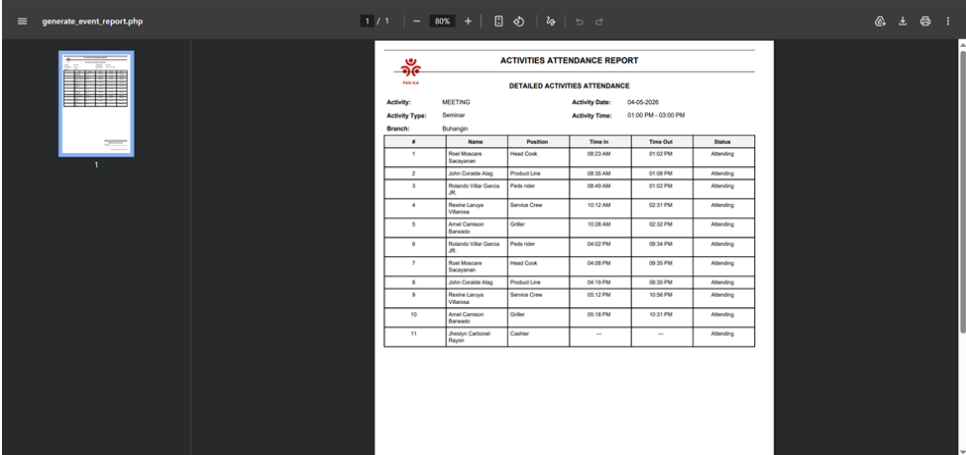

Figure 74. Employee Attendance Logs

6. Generate the following reports:

- **Detailed activities' attendance**

This functionality in the PAG-ILA system allows HR personnel and management staff to view detailed activities' attendance records of employees. This ensures that participation in scheduled activities is properly recorded, monitored, and reviewed, supporting accurate attendance tracking and effective activity management within the organization.

The system achieved a mean average of five (5) in this objective based on the HR and manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in providing detailed activity attendance within the PAG-ILA system.

The screenshot displays the 'ACTIVITIES ATTENDANCE REPORT' interface. It includes a sidebar with a thumbnail of the report, a main content area with the report title and filters, and a table of attendance data.

#	Name	Position	Time In	Time Out	Status

Figure 76. Manager Detailed Activities Attendance Report

- **Daily Time Record (DTR)**

This functionality in the PAG-ILA system allows the generation and monitoring of Daily Time Records (DTR) for employees, ensuring that all attendance entries such as time-in and time-out are accurately recorded and properly documented. This supports reliable attendance tracking, payroll processing, and workforce monitoring within the organization.

The system achieved a mean average of 4.9 in this objective based on the HR, employee, and manager evaluations. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and generating Daily Time Records (DTR) within the PAG-ILA system.

- Completed Activities**

This functionality in the PAG-ILA system allows HR Personnel and management staff to view and monitor employees' completed activities, ensuring that all accomplished tasks are properly recorded and tracked within the system. This supports accurate performance monitoring, accountability, and efficient activity management in the organization.

The system achieved a mean average of five (5) in this objective based on the HR and manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and tracking completed activities within the PAG-ILA system.

- **Leave Request**

This functionality in the PAG-ILA system allows employees to submit leave requests through the system, ensuring that applications are properly recorded, organized, and routed for approval. This supports

an efficient and structured leave management process, improving communication and tracking of employee absences within the organization.

The system achieved a mean average of 4.9 in this objective based on the HR, employee, and manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in handling and processing employee leave requests within the PAG-ILA system.

The screenshot shows a web browser window displaying the 'generate_leave_report.php' page. The main content is a 'LEAVE REQUEST FORM' for an employee named Jheslyn Carmonel Rayon from the Buhangin branch. The form includes fields for 'TYPE OF LEAVE' (Sick Leave / With Pay, Sick Leave / Without Pay, Vacation Leave / With Pay, Vacation Leave / Without Pay), 'Reason' (High Fever/Fu), 'Comment', 'Status' (Approved), 'Date Requested' (2026-03-30 12:01:23), and 'From' (2026-03-23) to 'To' (2026-03-26) dates. There is a section for the 'IMMEDIATE SUPERVISOR' with a 'Position' field.

Figure 84. HR Leave Request Report

This screenshot is identical to the one in Figure 84, showing the 'LEAVE REQUEST FORM' for Jheslyn Carmonel Rayon. It displays the same form fields: Employee Name, Branch, Type of Leave, Reason, Comment, Status, Date Requested, and the date range (From: 2026-03-23, To: 2026-03-26). The form is presented in a web browser window with the URL 'pag-ila.com/reports/generate_leave_report.php?leave_id=25'.

- **List of Users**

This functionality in the PAG-ILA system allows HR personnel and management staff to review, manage, and process employee leave requests submitted through the system. This ensures that leave applications are properly evaluated, approved or declined, and accurately documented, supporting an efficient and organized leave management process within the organization.

The system achieved a mean average of five (5) in this objective based on the HR and manager evaluation. Based on the descriptive equivalent scale, this rating falls under Very Efficient (4.50–5.00). This indicates that the system performs very efficiently in managing and processing employee leave requests within the PAG-ILA system.

Figure 89. Manager Employee List Report

Table 49 presents the functionality of the PAG-ILA System from the end-users, including HR personnel, managers, assistant managers, and employees. The survey uses a 5-point Likert scale (1–Poor, 5–Very Efficient) to measure the efficiency of various system features, with corresponding descriptions provided for each rating.

The survey focuses on key system functionalities such as employee registration and profile management, RFID-based attendance monitoring (time-in and time-out), leave request processing, performance evaluation, scheduling, and report generation. It also evaluates the system’s ability to provide real-time notifications, maintain accurate records, and ensure smooth navigation across modules. The results show that the system is rated as “Very Efficient” (4.50–5.00) across all functionalities tested. The mean scores for each item indicate a highly positive user experience. Overall, the data suggests that the PAG-ILA System effectively meets user needs in terms of functionality, accuracy, and ease of use, contributing to improved efficiency in human resource management processes.

Based on Table 44, Performance Efficiency obtained an average weighted mean of 5 (Very Efficient), which indicates strongly agree from the participants.

These questions are based on the objectives of the PAG-ILA system, particularly on attendance monitoring, leave request processing, employee performance assessment, and activity schedule management. The system is able to simplify essential HR, management, and employee tasks by providing accurate attendance logs, Daily Time Records (DTR), leave request status updates, and activity schedule notifications. This reflects the system's effectiveness in improving workflow efficiency, reducing manual processes, and enhancing overall user satisfaction among HR personnel, management staff, and employees.

Table 48. Functional Requirements Results

FUNCTIONAL SUITABILITY	HR PERSONNEL	MANAGEMENT STAFF	EMPLOYEE	Mean	Descriptive Equivalent
1. I can register employee without complication	5	-	-	5	Very Efficient
2. I can register users without complication.	5	-	-	5	Very Efficient
3. I can input user's personal information without difficulty.	5	-	-	5	Very Efficient
4. I am able to assign unique id numbers without duplication.	5	-	-	5	Very Efficient
5. I can assign role-based access by assigning all user's positions	5	-	-	5	Very Efficient

6. I can assign user's branch easily	5	-	-	5	Very Efficient

27. I can update activities schedules easily	5	5	-	5	Very Efficient
28. I can delete activities schedules easily	5	5	-	5	Very Efficient
29. I can approve activities schedules added by management staff	5	-	-	5	Very Efficient
30. I can decline activities schedules added by management staff	5	-	-	5	Very Efficient
31. I can view all user's logs whenever needed	5	5	-	5	Very Efficient
32. I can track employee's attendance logs.	5	5	-	5	Very Efficient
33. I can generate accurate detailed activities' attendance reports	5	5	-	5	Very Efficient
34. I can generate accurate daily time record reports	5	5	-	5	Very Efficient

35. I can generate accurate employee performance assessment reports	5	5	-	5	Very Efficient
36. I can generate accurate completed activities reports	5	5	-	5	Very Efficient
37. I can generate accurate leave request reports	5	5	-	5	Very Efficient
38. I can generate accurate complete list of users	5	5	-	5	Very Efficient
39. I can endorse employees for performance assessment	-	5	-	5	Very Efficient
40. I can evaluate employee's performance without difficulty	-	5	-	5	Very Efficient
41. I can record completed activities with accurate records	-	5	-	5	Very Efficient
42. I can notify declined employees' leave request	-	5	-	5	Very Efficient

43. I can notify approved employees' leave request	-	5	-	5	Very Efficient
44. I can edit employee shifts conveniently	-	5	-	5	Very Efficient
45. I can edit employment roles seamlessly	-	5	-	5	Very Efficient
46. I can check in using RFID feature without error.	-	-	5	5	Very Efficient
47. I can check out using RFID feature without error.	-	-	5	5	Very Efficient
48. I can submit my leave request easily through the system.	-	-	5	5	Very Efficient
49. I can monitor my leave credits clearly.	-	-	5	5	Very Efficient
50. I can monitor status of my leave requests without difficulty.	-	-	5	5	Very Efficient
51. I can update my personal information easily.	-	-	5	5	Very Efficient

52. I can view my personal information properly.	-	-	5	5	Very Efficient
53. The system allows me to attend assigned activities as scheduled.	-	-	5	5	Very Efficient
54. I can view my attendance logs with accurate data.	-	-	5	5	Very Efficient
55. I can generate the Daily Time Record (DTR) and the data are accurate	-	-	5	5	Very Efficient
MEAN				5	Very Efficient

Non-Functional Requirements obtained an average weighted mean of 5.00, which indicates a strong agreement from the participants. These results are aligned with the system's objectives of ensuring reliability, efficiency, and compatibility. The findings show that users were able to perform evaluation, scheduling, and reporting tasks without encountering system conflicts. Additionally, respondents confirmed that employee records and attendance logs were easily accessible, and reports were generated accurately by integrating data from different modules. The system was also observed to function smoothly alongside other applications without compatibility issues. These results demonstrate that the PAG-ILA system effectively meets its non-functional requirements, providing a stable, efficient, and user-friendly experience for its users.

Table 49. Non-Functional Requirements Results

PERFORMANCE EFFICIENCY	HR PERSONNEL	MANAGEMENT STAFF	EMPLOYEE	Mean	Descriptive Equivalent
1. I experience smooth performance when handling multiple branch data. (e.g., viewing 60+ employee records across branches)	5	-	-	5	Very Efficient
2. I can process leave requests without noticeable lag.	5	5	5	5	Very Efficient
3. I can manage activity schedules without system delays.	5	5	-	5	Very Efficient
4. I can access attendance and employee logs quickly.	5	5	-	5	Very Efficient
5. I can generate reports within an acceptable time.	5	5	5	5	Very Efficient
6. I experience responsive system performance during peak operations.	5	-	-	5	Very Efficient
7. I experience fast response when evaluating	-	5	-	5	Very Efficient

employee performance.					
8. I can record completed activities quickly and efficiently.	-	5	-	5	Very Efficient
9. I experience fast response when checking in and out using RFID	-	-	5	5	Very Efficient
10. I can view leave credits and status quickly.	-	-	5	5	Very Efficient
11. I can access personal information and calendar schedules smoothly.	-	-	5	5	Very Efficient
USABILITY					
12. I find the system interface clearly organized for managing multiple branches.	5	-	-	5	Very Efficient
13. I can easily identify employees based on their branch, position, and employment status	5	-	-	5	Very Efficient
14. I can easily process leave approvals or declines.	5	5	-	5	Very Efficient
15. I can easily manage activity schedules through the system.	5	5	-	5	Very Efficient

16. I can easily navigate employee logs and attendance records.	5	5	-	5	Very Efficient
17. I can generate reports without difficulty.	5	5	5	5	Very Efficient
18. I find the employee evaluation feature easy to use.	-	5	-	5	Very Efficient
19. I can record completed activities without confusion.	-	5	-	5	Very Efficient
20. I find managing shifts and employment roles straightforward.	-	5	-	5	Very Efficient
21. I find the RFID check-in and check-out process easy to use.	-	-	5	5	Very Efficient
22. I can easily understand how to apply for leave requests.	-	-	5	5	Very Efficient
23. I can navigate my leave credits and status without confusion.	-	-	5	5	Very Efficient
24. I can manage my personal information without difficulty.	-	-	5	5	Very Efficient
25. I find the activity calendar easy to	-	-	5	5	Very Efficient

understand and use.					
RELIABILITY					
26. I observe that the system accurately stores employee data from all branches.	5	-	-	5	Very Efficient
27. I trust that activity schedules are saved and updated correctly.	5	5	-	5	Very Efficient
28. I find the system consistently available when managing multiple branch operations.	5	-	-	5	Very Efficient
29. I trust that leave requests are processed accurately without errors.	5	5	5	5	Very Efficient
30. I can rely on employee logs and attendance records to be correct.	5	5	-	5	Very Efficient
31. I experience system operation without unexpected errors.	5	-	-	5	Very Efficient
32. I observe that data is preserved properly during operations.	5	-	-	5	Very Efficient
33. I trust that generated reports	5	5	5	5	Very Efficient

are complete and accurate.					
34. I can rely on the system to accurately record employee evaluations.	-	5	-	5	Very Efficient
35. I can depend on the system to properly record completed activities.	-	5	-	5	Very Efficient
36. I can rely on the RFID system to record my attendance accurately.	-	-	5	5	Very Efficient
37. I can depend on the system to correctly update my leave credits.	-	-	5	5	Very Efficient
38. I experience consistent access to my personal records and calendar.	-	-	5	5	Very Efficient
SECURITY					
39. I can only access features assigned to my role.	5	5	5	5	Very Efficient
40. I believe employee records are securely stored in the system	5	5	-	5	Very Efficient
41. I trust that evaluation and performance data	-	5	-	5	Very Efficient

are protected from unauthorized access.					
42. I can securely process leave requests and employee records.	5	5	-	5	Very Efficient
43. I believe that attendance logs and employee data are properly protected.	5	5	-	5	Very Efficient
44. I trust that system reports are accessible only to authorized users.	5	5	5	5	Very Efficient
45. I feel confident that my attendance data is securely recorded.	-	-	5	5	Very Efficient
46. I believe that my leave requests are protected from unauthorized changes	-	-	5	5	Very Efficient
47. I can securely log in to access my employee information.	-	-	5	5	Very Efficient
MAINTAINABILITY					
48. I notice that system updates do not affect its system functions.	5	5	5	5	Very Efficient
49. I can observe that issues and errors	5	5	5	5	Very Efficient

are corrected efficiently.					
50. I believe the system can support future enhancements when needed.	5	5	5	5	Very Efficient
51. I believe the system can be improved without affecting existing functions.	5	5	5	5	Very Efficient
52. I can adapt easily to system changes and workflow updates.	5	5	5	5	Very Efficient
53. I find that errors in employee records can be corrected easily.	5	5	-	5	Very Efficient
COMPATABILITY					
54. I observe that the system integrates attendance data from all branches effectively.	5	-	-	5	Very Efficient
55. I observe that the system is compatible with RFID devices used in different branches.	5	-	-	5	Very Efficient
56. I can generate reports that integrate data from different modules properly	5	5	5	5	Very Efficient

57. I can use evaluation, scheduling, and reporting features without system conflicts.	5	5	-	5	Very Efficient
58. I can access employee records and attendance logs without issues.	5	5	5	5	Very Efficient
59. I can use the system alongside other applications without compatibility problems.	5	-	5	5	Very Efficient
60. I can use the RFID attendance system together with other system features without issues	-	-	5	5	Very Efficient
61. I find that all modules such as attendance, leave, and calendar work together properly.	-	-	5	5	Very Efficient
PORTABILITY					
62. I can access the system from different devices successfully.	5	5	5	5	Very Efficient
63. I can use the system in different branches or locations consistently.	5	5	-	5	Very Efficient

64. I can still use the system properly after deployment or installation changes.	5	5	5	5	Very Efficient
65. I can still use the system properly when transferred to another environment.	5	5	5	5	Very Efficient
66. I can use the RFID attendance feature in different locations or branches.	-	-	5	5	Very Efficient
MEAN				5	Very Efficient

CHAPTER IV

CONCLUSION AND RECOMMENDATION

Conclusion

The PAG-ILA system was successfully developed and implemented in accordance with the project's general and specific objectives, providing an effective Human Resource Management System with RFID-based attendance monitoring for Penong's Barbecue Seafoods & Grill. The system enabled HR personnel to efficiently register and manage users, maintain employee records, control role-based access, and oversee leave requests, performance assessments, activities, and system logs. It also allowed management staff to endorse and evaluate employee performance, manage activity schedules, leave requests, and shifts, and monitor operations within their respective branches. For employees, the system provided a convenient and accurate method of recording attendance through RFID, applying for leave, monitoring leave status, and accessing activity schedules. Furthermore, the system ensured reliable tracking of attendance logs and successfully generated comprehensive reports, including detailed activities attendance, daily time records, performance assessments, leave requests, completed activities, and user lists. Through the integration of automated processes and RFID technology, the system addressed the issues of manual errors, delays, and record mismanagement identified in the existing process.

Based on the results gathered from the end-user evaluation, the PAG-ILA system successfully met its stated objectives. The system effectively addressed the identified problems of manual processes, such as inaccurate attendance tracking, delays in leave processing, and inefficient performance evaluation. The integration of RFID technology improved the accuracy and reliability of attendance monitoring, while the automation of HR processes enhanced efficiency and reduced human errors.

Furthermore, the evaluation results showed highly positive feedback from HR personnel, management staff, and employees, with most features receiving a

“Very Efficient” rating. This indicates that the system is user-friendly, reliable, and capable of supporting the organization’s daily operations. Overall, the PAG-ILA system proved to be an effective solution that improves productivity, ensures data accuracy, and enhances overall human resource management in Penong’s Barbecue Seafoods & Grill.

Recommendations

Based on the users’ experiences and evaluation results, the following recommendations are suggested:

- **Integrate RFID Attendance for Managers** – extend the RFID-based attendance monitoring feature to include managers and assistant managers to ensure consistent and accurate tracking of attendance across all organizational roles.
- **Customized RFID Card/ID** – each card can be designed with the employee’s name, photo, department, and unique RFID number for easier identification and improved security. This enhancement helps reduce the risk of card swapping or unauthorized use, ensuring more accurate attendance tracking.
- **Mobile Application** – enhances accessibility and user convenience, most especially employees. Through a mobile application, users can access the system anytime and anywhere without opening Google Chrome.
- **Push Notifications** – allow the system to send real-time alerts to users regarding important updates such as RFID attendance logs, leave request status (approved or declined), schedule changes, activity reminders, and performance evaluation updates.
- **Higher Quality RFID Scanner/Reader** – improve the accuracy, speed, and reliability of attendance recording in the PAG-ILA system. Advanced RFID readers can provide faster scanning response, wider reading range, and better resistance to interference, reducing errors such as failed scans or duplicate entries.

- **System Integration (Payroll)** – to automate and streamline employee salary computation and processing. This integration allows attendance records, overtime hours, leave deductions, and absences captured in the PAG-ILA system to be directly used as inputs for payroll computation.

VICTOR Y. BONALOS

Area Manager

Penong's Barbecue Seafoods & Grill SASA

KM 9 Sasa, Davao City, Davao del Sur

Dear **MR. BONALOS,**

Greetings of peace and prosperity!

The undersigned are the BSIS Third Year students of the Davao del Norte State College. As part of the BSIS program curriculum, we need to create a Capstone Project, which requires us to plan, design, and implement an information system for an organization.

In connection, the undersigned would like to ask permission from your good office to conduct a preliminary environmental scanning to help us assess the feasibility of providing a software solution as our Capstone Project in your organization.

If given your approval, we will be subjected to defenses and present the proposal to a Panel of Experts. If we successfully prove the feasibility and significance of the project, we have to constantly communicate with you and other project stakeholders to ensure a satisfactory quality of software product and provide IT solutions that will merit your business needs.

We are looking forward to your positive response.

Thank you and more power.

Sincerely yours,

BONALOS ANGEL G.

APPENDIX B

Project Acceptance Certificate from the Organization

CERTIFICATE OF COMPLETION

This is to certify that **Angel G. Bonalos, Vohn Carlo R. Cabaluna, Christine Joy Cadavos,** and **Marilou A. Verano**, fourth-year students taking up Bachelor of Science in Information Systems (BSIS) at the Institute of Computing, Davao del Norte State College, have successfully deployed and implemented their capstone project for six (6) weeks from February 16, 2026, to April 03, 2026, titled:

"PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for Penong's Barbecue Seafoods & Grill"

Given this 4th day of April 2026 at Penong's Barbecue Seafoods & Grill - NHA, Espidillion Pathway, Buhangin, Davao City, Davao del Sur.

PAG-ILA: A HUMAN RESOURCE MANAGEMENT SYSTEM WITH ATTENDANCE MONITORING USING RFID FOR PENONG'S BARBECUE SEAFOODS & GRILL

Date: FEBRUARY 16, 2026

Error Found / Lacking Functionalities/ Change Request:

- Add an employee shifts options upon registering and editing an employee's information.
- Separate the first and second shift schedules.
- Include an option to classify employees as new or old regular.

Actions Taken:

- Implemented selectable employee shift options during both registration and profiling editing.
- Separated first and second shift schedules to ensure clearer distinction and management.
- Added a classification option to identify employees as new regular or old regular.

Error Logs/Feature Request Forms

Institute of Computing

PAG-ILA: A HUMAN RESOURCE MANAGEMENT SYSTEM WITH ATTENDANCE MONITORING USING RFID FOR PENONG'S BARBECUE SEAFOODS & GRILL Weekly Progress Report

Week No: 1

**Deployment Area: Penong's Barbecue Seafoods & Grill –
Sasa, NHA, & Buhangin Branch**

**Date Covered: February
16 - 20, 2026**

**Stakeholders Involved: HR Personnel, Management Staff, &
Employee**

Narrative:

During the deployment phase, after one week of using, monitoring, and system exploration, the organization identified several additional issues and enhancements requests to further improve the system's functionality and usability.

One of the requested improvements was the addition of employee shift options during employee registration and profile editing. This enhancement allows administrators to assign the appropriate shift schedule to each employee upon registration and easily update it whenever necessary. To align with the organization's actual operations, the first shift and second shift schedules were also separated, ensuring that working hours are clearly defined and scheduling conflicts are avoided.

Another important enhancement involved the Rest Day configuration, wherein Saturday and Sunday were added as selectable rest day options. This ensures that employee schedules accurately reflect actual non-working days based on the organization's policies.

The organization also requested improvements in the Daily Time Record (DTR) monitoring interface. Specifically, undertime and late attendance entries were highlighted using color indicators to make attendance issues easier to identify; yellow for undertime and red for late records. This visual enhancement helps administrators quickly monitor attendance discrepancies.

Additionally, the organization requested improvements to the employee activity attendance form arrangement to make it more organized and user-friendly. Likewise, it was discovered that the attendance page was not arranged in descending order, which made recent records difficult to track. As a result, the attendance records were restructured to display entries in descending order, ensuring that the most recent attendance logs appear first for easier monitoring and review.

VISION

An institution leading in agri-fisheries and socio-cultural development in the ASEAN region.

PAG-ILA: A HUMAN RESOURCE MANAGEMENT SYSTEM WITH ATTENDANCE MONITORING USING RFID FOR PENONG'S BARBECUE SEAFOODS & GRILL Weekly Progress Report

Week No: 2

**Deployment Area: Penong's Barbecue Seafoods & Grill -
Sasa, NHA, & Buhangin Branch**

**Date Covered: February
23 - 27, 2026**

Stakeholders Involved: Management Staff

Narrative:

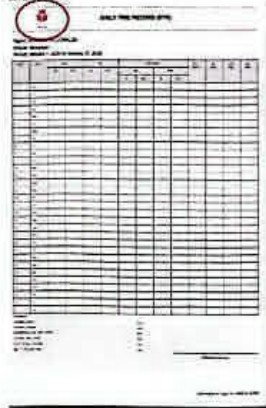

During the second week of the deployment phase, the system underwent continuous revisions to address the issues and enhancement requests identified during the first week of testing and system use. The focus of this phase was to refine system functionalities, improve usability, and ensure alignment with the organization's operational requirements.

Additionally, the system's DTR logo was replaced with the official Penong's logo to align with the organization's branding. Overall, the system was continuously refined throughout Week 2 to ensure that all requested enhancements from the initial deployment were successfully implemented and met the organization's expectations.

Evidences:

Change DTR system logo into organization's logo: Penong's Logo.

PAG-ILA: A HUMAN RESOURCE MANAGEMENT SYSTEM WITH ATTENDANCE MONITORING USING RFID FOR PENONG'S BARBECUE SEAFOODS & GRILL Weekly Progress Report

Week No: 3

**Deployment Area: Penong's Barbecue Seafoods & Grill –
Sasa, NHA, & Buhangin Branch**

**Date Covered: March 02
- 06, 2026**

**Stakeholders Involved: HR Personnel, Management Staff,
Employee**

Narrative:

During the third week of the deployment phase, the system was still under continuous revision because the organization made changes in their processes and daily operations. These changes affected how the system should work, so several parts of the system needed to be updated again.

Unlike the previous weeks, which focused on adding features and fixing small issues, Week 3 involved bigger changes that affected the overall flow of the system. The organization adjusted how they manage attendance, employee schedules, and leave requests. Because of this, the system had to be reviewed and modified to match these new processes.

Some features that were already completed in the earlier weeks had to be edited or redesigned. This includes parts of the shift scheduling, attendance tracking, and employee classification. These updates were necessary to make sure that the system follows the actual workflow of the organization.

This week also showed the importance of making the system flexible and easy to adjust. The development team worked closely with the organization to understand the changes and apply them correctly in the system. Regular communication and feedback helped ensure that the system updates were accurate and useful.

Week 3 was a very important phase because it focused on making sure that the system fully matches the organization's real operations. The continuous revisions helped improve the system so it becomes more reliable, accurate, and suitable for actual use.

VISION

PAG-ILA: A HUMAN RESOURCE MANAGEMENT SYSTEM WITH ATTENDANCE MONITORING USING RFID FOR PENONG'S BARBECUE SEAFOODS & GRILL Weekly Progress Report

Week No: 4

**Deployment Area: Penong's Barbecue Seafoods & Grill -
Sasa, NHA, & Buhangin Branch**

**Date Covered: March 09
- 13, 2026**

Stakeholders Involved: HR Personnel

Narrative:

This week was the time when the system became ready to use because all the needed revisions had already been completed. Since the changes and improvements were successfully done, the system was prepared for actual operation. During this week, all users were registered in the system so they could start using it. This marked the beginning of the system's official operation, where users were able to access its features and perform their tasks. Overall, this week was an important part of the project because it showed the transition from revision and testing to actual use of the system.

Evidences:

Before

The screenshot shows the 'Employee List' page of the PAG-ILA system. It features a sidebar with navigation options and a main content area with a table of employee records. The table includes columns for Employee ID, Full Name, Email, Account, User Type, Status, and Date Added. Search and filter buttons are visible at the top right of the table.

VISION

PAG-ILA: A HUMAN RESOURCE MANAGEMENT SYSTEM WITH ATTENDANCE MONITORING USING RFID FOR PENONG'S BARBECUE SEAFOODS & GRILL Weekly Progress Report

Week No: 5

**Deployment Area: Penong's Barbecue Seafoods & Grill –
Sasa, NHA, & Buhangin Branch**

**Date Covered: March 16
- 20, 2026**

Stakeholders Involved: HR Personnel

Narrative:

The system's attendance features were working properly during this period. Some improvements were also made to enhance its functionality. A computation for late and undertime (UDT) hours was added to provide more accurate tracking of employee attendance. The attendance page was separated for each branch to make monitoring more organized. In the Daily Time Record (DTR) summary, Sunday was removed as a regular working day, and all related computations were merged into regular days. Additionally, regular values in the DTR were changed from hours to days for easier understanding, while overtime remained measured in hours.

Evidences:

Change DTR system logo into organization's logo: Penong's Logo.

EVALUATION FORM (EMPLOYEE)

Name: RA MAE L. COMBES Date: 04/27/28

Thank you for participating in this short survey to help us determine the quality of the capstone project entitled **PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for Penong's Barbecue Seafoods & Grill**.

Rest assured that any personal information collected for this survey, including your name, will be used exclusively for this study and treated with strict confidentiality.

This survey contains several questions in which to be rated from one (1) to five (5), where one (1) being the lowest and five (5) being the highest. You are also encouraged to give comments and or/suggestions. Please check your desired choice. The scale is described as follows.

Rating	Description
5	Strongly Agree
4	Agree
3	Fairly Agree
2	Disagree
1	Strongly Disagree

	5	4	3	2	1
FUNCTIONAL SUITABILITY					
1. I can check in using RFID feature without error.		/			
2. I can check out using RFID feature without error.		/			
3. I can submit my leave request easily through the system.	/				
4. I can monitor my leave credits clearly.	/				
5. I can monitor status of my leave requests without difficulty.		/			
6. I can update my personal information easily.	/				
7. I can view my personal information properly.	/				
8. I can view activity schedule calendar.	/				
9. The system allows me to attend assigned activities as scheduled.		/			

VISION

An institution leading in agriculture and socio-cultural development in the ASEAN region.

EVALUATION FORM (EMPLOYEE)

Name: Arnel C. Baroado

Date: 09-27-26

Thank you for participating in this short survey to help us determine the quality of the capstone project entitled **PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for Penong's Barbecue Seafoods & Grill**.

Rest assured that any personal information collected for this survey, including your name, will be used exclusively for this study and treated with strict confidentiality.

This survey contains several questions in which to be rated from one (1) to five (5), where one (1) being the lowest and five (5) being the highest. You are also encouraged to give comments and or/suggestions. Please check your desired choice. The scale is described as follows.

Rating	Description
5	Strongly Agree
4	Agree
3	Fairly Agree
2	Disagree
1	Strongly Disagree

	5	4	3	2	1
FUNCTIONAL SUITABILITY					
1. I can check in using RFID feature without error.		✓			
2. I can check out using RFID feature without error.		✓			
3. I can submit my leave request easily through the system.	✓				
4. I can monitor my leave credits clearly.	✓				
5. I can monitor status of my leave requests without difficulty.	✓				
6. I can update my personal information easily.	✓				
7. I can view my personal information properly.	✓				
8. I can view activity schedule calendar.	✓				
9. The system allows me to attend assigned activities as scheduled.	✓				

VISION

An institution leading in agri-fisheries and socio-cultural development in the ASEAN region.

MISSION

DNSC shall produce future-ready workforce, create innovative solutions and technologies, empower communities, and uphold good governance towards sustainable development.

EVALUATION FORM (HR)

Name: Victor Y. Bonalos

Date: 04/27/26

Thank you for participating in this short survey to help us determine the quality of the capstone project entitled **PAG-ILA: A Human Resource Management System with Attendance Monitoring using RFID for Penong's Barbecue Seafoods & Grill**.

Rest assured that any personal information collected for this survey, including your name, will be used exclusively for this study and treated with strict confidentiality.

This survey contains several questions in which to be rated from one (1) to five (5), where one (1) being the lowest and five (5) being the highest. You are also encouraged to give comments and or/suggestions. Please check your desired choice. The scale is described as follows.

Rating	Description
5	Strongly Agree
4	Agree
3	Fairly Agree
2	Disagree
1	Strongly Disagree

	5	4	3	2	1
FUNCTIONAL SUITABILITY					
1. I can register employee without complication.	/				
2. I can register users without complication.	/				
3. I can input user's personal information without difficulty.	/				
4. I am able to assign unique id numbers without duplication.	/				
5. I can assign role-based access by assigning all user's positions	/				
6. I can assign user's branch easily	/				
7. I can assign employee's shifts without confusion	/				
8. I can assign user's positions easily	/				
9. I can update activities schedule easily	/				
10. I can add activities schedule easily	/				

VISION

An institution leading in agri-fisheries and socio-cultural development in the ASEAN region.

MISSION

DNSC shall produce future-ready workforce, create innovative solutions and technologies, empower communities, and uphold good governance towards sustainable development.

34. I can generate accurate employee performance assessment reports	/				
36. I can generate accurate completed activities reports	/				
37. I can generate accurate leave request reports	/				
38. I can generate accurate complete list of users	/				
PERFORMANCE EFFICIENCY					
39. I experience smooth performance when handling multiple branch data. (e.g., viewing 60+ employee records across branches)	/				
40. I can process leave requests without noticeable lag.	/				
41. I can manage activity schedules without system delays.	/				
42. I can access attendance and employee logs quickly.	/				
43. I can generate reports within an acceptable time.	/				
44. I experience responsive system performance during peak operations.	/				
USABILITY					
45. I find the system interface clearly organized for managing multiple branches.	/				
RELIABILITY					
46. I can easily identify employees based on their branch, position, and employment status.	/				
47. I can easily process leave approvals or declines.	/				
48. I can easily manage activity schedules through the system.	/				
49. I can easily navigate employee logs and attendance records.	/				
50. I can generate reports without difficulty.	/				
51. I observe that the system accurately stores employee data from all branches.	/
